The device is particularly designed to make the output stage of a stereo All-Digital High Efficiency (DDX™) amplifier capable to deliver 80 + 80W @ THD = 10% at  $V_{CC}$  35V output power on 8Ω load.

In single BTL configuration is also capable to deliver a peak of 160W @THD = 10% at  $V_{CC}$  = 35V on 4Ω load. The input pins have threshold proportional to  $V_L$  pin voltage.
