

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

STEVAL-CCA021V1

USB audio demonstration board based on the STM32F103RE and TS4657

Data brief

Features

- STM32F103RE performance line microcontroller
- 16 MHz crystal unit
- USB connector and ESD protection
- Two LEDs driven by the microcontroller
- Push button to control the firmware mode
- TS4657 - single supply stereo digital audio line driver with 2.2 V_{RMS} capless outputs:
 - 16- to 24-bit audio data format stereo DAC, 32 to 48 kHz sample rate
 - I²S, right or left-justified compatible digital audio interface
- TS2012 - filter-free stereo 2x2.8 W class D audio power amplifier
- TS4962 - 2.8 W filter-free mono class D audio power amplifier
 - Output available either through mono jack connector or to on-board speaker
- TS472 - very low noise microphone preamplifier with 2.0 V bias output and active low standby mode
 - Single-ended output available for connection to ADC of a microcontroller
- On-board microphone and small speaker
- RoHS compliant

Description

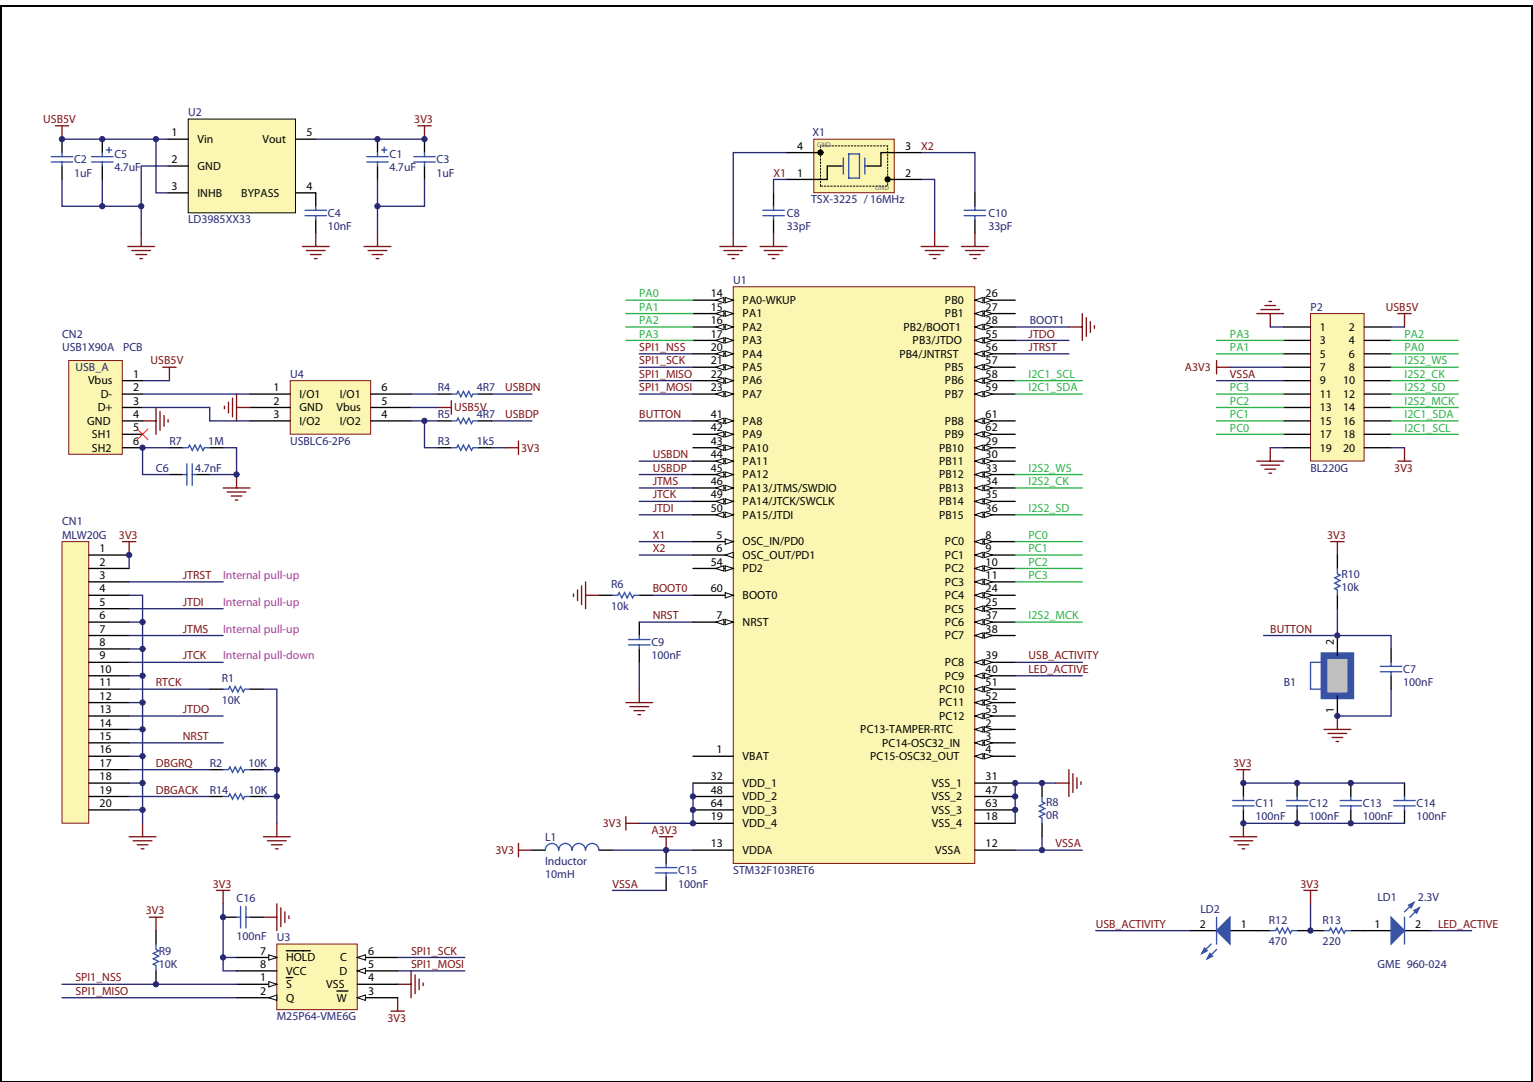

The STEVAL-CCA021V1 demonstration board implements a USB audio card based on the STM32F103RE microcontroller and the TS4657 audio digital-to-analog converter (decoder). The complete system consists of a controller board driven by the STM32F103RE microcontroller, and a TS4657-based audio board.

Mono audio output is available either through the TS4962-driven on-board speaker or via the mono jack connector, and stereo output is possible through the TS2012 stereo audio amplifier which can drive external speakers. Both audio amplifiers are class D.

For audio input, an on-board microphone is connected through the TS472 microphone pre-amplifier to the ADC input of the microcontroller. It is possible to disconnect the controller section from the audio section to use the boards individually for other applications.
