

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

STEVAL-ICB001V1

Capacitive touch sensor demonstration board based on the STMPE1208S

Data Brief

Features

- Host software and ST7 source code provide a user-friendly environment for operating the board in:
 - Standalone mode
 - PC GUI mode
- In standalone mode, touch events are displayed on a 64 X 128 monochrome LCD
- Board power is supplied either through a Mini B-type USB connector, or by AAA-size Ni batteries
- The board is equipped with an alternate I²C path for external control, and an ICC connector to reprogram the ST7 microcontroller Flash memory

Description

The STEVAL-ICB001V1 demonstration board is based on the capacitive touch sensor STMPE1208S. An ST72F63B microcontroller functions as the I²C master.

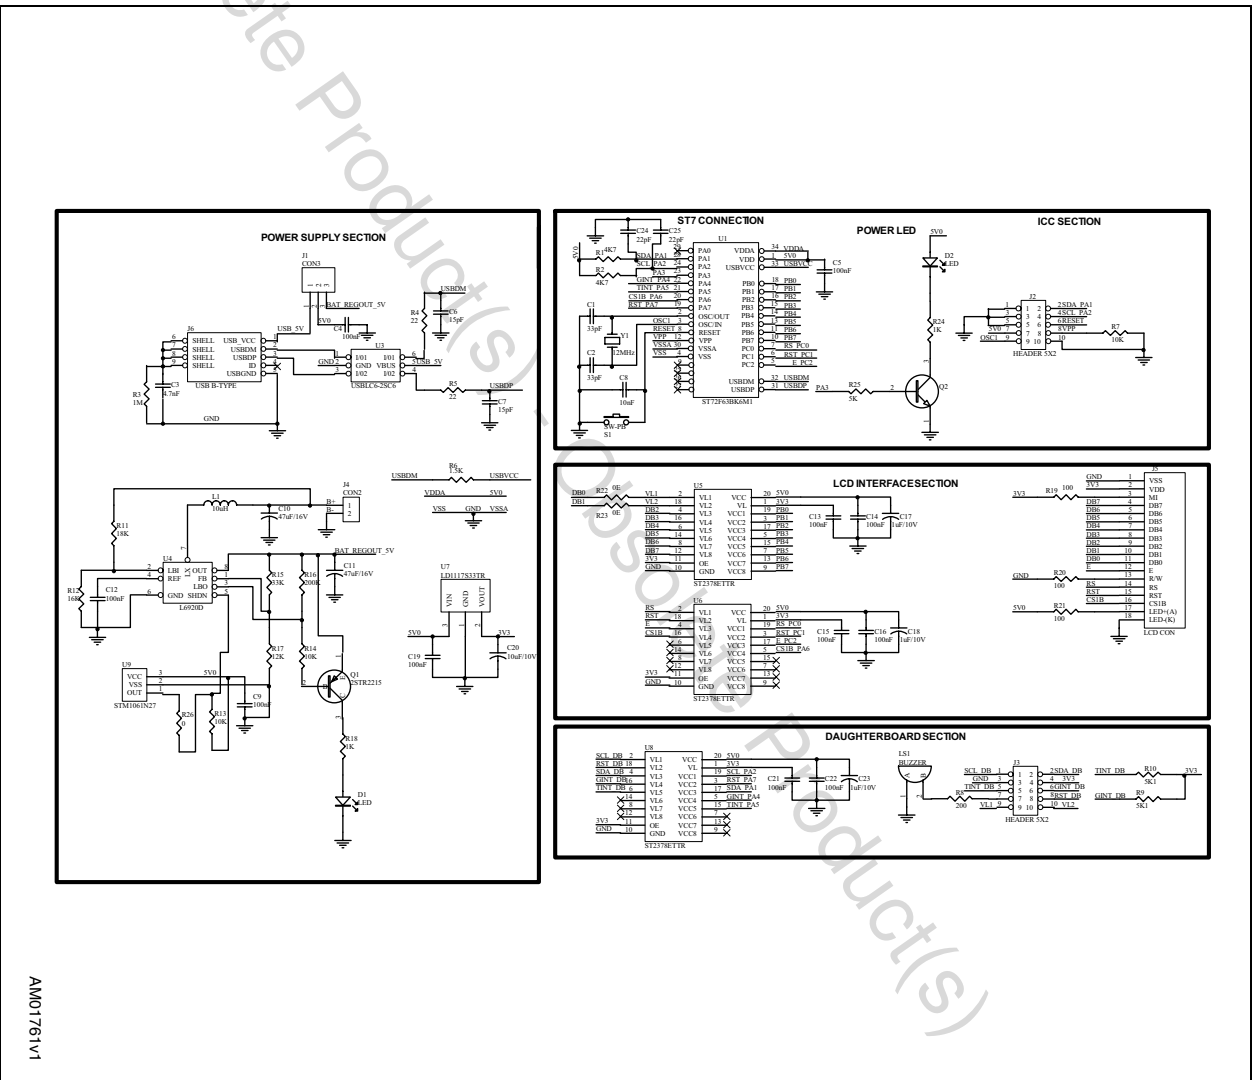

The purpose of the board is to demonstrate the features and capabilities of the STMPE1208S, using a Windows[®]-based host software application and one of several USB low-speed microcontrollers from ST acting as the control device (in this board the ST72F63B is used).

For the STEVAL-ICB001V1, the ST72F63B microcontroller acts as the I²C master and controls STMPE1208S device, which functions as an I²C slave.

The STMPE1208S device interfaces with the touch keys, slider and rotator. The device senses touch events and provides the information to the ST72F63B via I²C communication.
