## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## STK433-890N-E

# Thick-Film Hybrid IC <br> 4ch class-AB Audio Power IC 80W×4ch 

## Overview

The STK433-890N-E is 4 channels class-AB audio frequency power amplifier hybrid IC.

## Application

- Audio Power amplifiers

## Features

- Pin-to-pin compatible outputs ranging from 40 W to 80 W .
- Output load impedance: $\mathrm{R}_{\mathrm{L}}=6 \Omega$ recommended.
- Allows the use of predesigned applications for standby and mute circuit.
- Miniature package.
- Allowable load shorted time: 0.3 second

## Series model

|  | STK433-040N-E | STK433-060N-E | STK433-130N-E |
| :--- | :---: | :---: | :---: |

## Specifications

Absolute Maximum Ratings at $\mathrm{Ta}=25^{\circ} \mathrm{C}, \mathrm{Tc}=25^{\circ} \mathrm{C}$ unless otherwise specified

| Parameter | Symbol | Conditions | Ratings | Unit |
| :---: | :---: | :---: | :---: | :---: |
| Maximum power supply voltage | $\mathrm{V}_{\text {CC }}$ max (0) | Non signal | $\pm 54$ | V |
|  | $V_{\text {CC }}$ max (1) | Signal, $\mathrm{R}_{\mathrm{L}} \geq 6 \Omega$ | $\pm 47$ | V |
|  | $V_{C C}$ max (2) | Signal, $\mathrm{R}_{\mathrm{L}}=4 \Omega$ | $\pm 40$ | V |
| Minimum operation supply voltage | $V_{C C}$ min |  | $\pm 10$ | V |
| \#13 Operating voltage *5 | VST OFF max | \#13pin voltage | -0.3 to +5.5 | V |
| Thermal resistance | өj-c | Per power transistor | 2.1 | ${ }^{\circ} \mathrm{C} / \mathrm{W}$ |
| Junction temperature | Tj max | Both the Tj max and Tc max conditions must be met. | 150 | ${ }^{\circ} \mathrm{C}$ |
| Operating substrate temperature | Tc max |  | 125 | ${ }^{\circ} \mathrm{C}$ |
| Storage temperature | Tstg |  | -30 to +125 | ${ }^{\circ} \mathrm{C}$ |
| Allowable time for load short-circuit | ts | $\begin{aligned} & \mathrm{V}_{\mathrm{CC}}= \pm 34 \mathrm{~V}, \mathrm{R}_{\mathrm{L}}=6 \Omega, \mathrm{f}=50 \mathrm{~Hz} \\ & \mathrm{P}_{\mathrm{O}}=50 \mathrm{~W}, 1 \mathrm{ch} \text { drive } \end{aligned}$ | 0.3 | S |

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

## ORDERING INFORMATION

See detailed ordering and shipping information on page 12 of this data sheet.

Operating Characteristics at $\mathrm{Tc}=25^{\circ} \mathrm{C}, \mathrm{R}_{\mathrm{L}}=6 \Omega$ (Non-inductive Load), $\mathrm{Rg}=600 \Omega, \mathrm{VG}=30 \mathrm{~dB}$

| \#13 Stand-by OFF threshold *5 | VST OFF | $\pm 34$ |  |  |  | Operation | 2.5 | 3.0 | 5.5 | V |

Note
*1. 1channel operation.
*2. All tests are measured using a constant-voltage supply unless otherwise specified
*3. The output noise voltage is peak value of an average-reading meter with a rms value scale (VTVM). A regulated AC supply $(50 \mathrm{~Hz})$ should be used to eliminate the effects of AC primary line flicker noise
*4. Allowable time for load short-circuit and output noise voltage are measured using the specified transformer power supply.
*5. The impression voltage of '\#13 (Stand-By) pin' must not exceed the maximum rating.
Power amplifier operate by impressing voltage +2.5 to +5.5 V to ' $\# 13$ (Stand-By) pin'.

* Please connect - PreVCC pin (\#1 pin) with the stable minimum voltage. and connect so that current does not flow in by reverse bias.
* In case of heat sink design, we request customer to design in the condition to have assumed market.
* The case of this Hybrid-IC is using thermosetting silicon adhesive (TSE322SX).
* Weight of HIC : (typ) 37.0 g

Outer carton dimensions $(\mathrm{W} \times \mathrm{L} \times \mathrm{H}): 452 \mathrm{~mm} \times 325 \mathrm{~mm} \times 192 \mathrm{~mm}$

## Pin Layout

[STK433-000N/-100N/-800Nsr Pin Layout]

## Characteristic of Evaluation Board

## STK433-890N-E

## A Thermal Design Tip For STK433-890N-E Amplifier

## [Thermal Design Conditions]

The thermal resistance $(\theta \mathrm{c}-\mathrm{a})$ of the heat-sink which manages the heat dissipation inside the Hybrid IC will be determined as follow:
(Condition 1) The case temperature (Tc) of the Hybrid IC should not exceed $125^{\circ} \mathrm{C}$

$$
\begin{equation*}
\mathrm{Pd} \times \theta \mathrm{c}-\mathrm{a}+\mathrm{Ta}<125^{\circ} \mathrm{C} \tag{1}
\end{equation*}
$$

Where Ta : the ambient temperature for the system
(Condition 2) The junction temperature of each power transistor should not exceed $150^{\circ} \mathrm{C}$

$$
\begin{equation*}
\mathrm{Pd} \times \theta \mathrm{c}-\mathrm{a}+\mathrm{Pd} / \mathrm{N} \times \theta \mathrm{j}-\mathrm{c}+\mathrm{Ta}<150^{\circ} \mathrm{C} \tag{2}
\end{equation*}
$$

Where N : the number of transistors (two for 1 channel, ten for channel) $\theta \mathrm{j}-\mathrm{c}$ : the thermal resistance of each transistor (see specification)
Note that the power consumption of each power transistor is assumed to be equal to the total power dissipation (Pd) divided by the number of transistors ( N ).
From the formula (1) and (2), we will obtain:

$$
\begin{align*}
& \theta \mathrm{c}-\mathrm{a}<(125-\mathrm{Ta}) / \mathrm{Pd}  \tag{1}\\
& \theta \mathrm{c}-\mathrm{a}<(150-\mathrm{Ta}) / \mathrm{Pd}-\theta \mathrm{j}-\mathrm{c} / \mathrm{N}
\end{align*}
$$

The value which satisfies above formula (1)' and (2)' will be the thermal resistance for a desired heat-sink.
Note that all of the component except power transistors employed in the Hybrid IC comply with above conditions.

## [Example of Thermal Design]

Generally, the power consumption of actual music signals are being estimated by the continuous signal of
$1 / 8 \mathrm{PO}$ max. (Note that the value of $1 / 8 \mathrm{P}_{\mathrm{O}}$ max may be varied from the country to country.)
(Sample of STK433-890N-E ; 50W $\times 4 \mathrm{ch}$ )
If $\mathrm{V}_{\mathrm{CC}}$ is $\pm 34 \mathrm{~V}$, and $\mathrm{R}_{\mathrm{L}}$ is $6 \Omega$, then the total power dissipation ( Pd ) of inside Hybrid IC is as follow;
$\mathrm{Pd}=99.0 \mathrm{~W}$ (at 6.25 W output power, $1 / 8$ of $\mathrm{P}_{\mathrm{O}} \max$ )
There are eight (8) transistors in Audio Section of this Hybrid IC, and thermal resistance ( $\theta \mathrm{j}-\mathrm{c}$ ) of each transistor is $2.1^{\circ} \mathrm{C} / \mathrm{W}$. If the ambient temperature $(\mathrm{Ta})$ is guaranteed for $50^{\circ} \mathrm{C}$, then the thermal resistance $(\theta \mathrm{c}-\mathrm{a})$ of a desired heatsink should be;

$$
\begin{aligned}
& \text { From (1)', } \quad \begin{aligned}
\theta \mathrm{c}-\mathrm{a} & <(125-50) / 99.0 \\
& <0.76 \\
\text { From (2), } & \theta \mathrm{c}-\mathrm{a}
\end{aligned}<(150-50) / 99.0-2.1 / 8 \\
&<0.75
\end{aligned}
$$

Therefore, in order to satisfy both (1)' and (2)', the thermal resistance of a desired Heat-sink will be $0.75^{\circ} \mathrm{C} / \mathrm{W}$.
[Note]
Above are reference only. The samples are operated with a constant power supply. Please verify the conditions when your system is actually implemented.

## STK433-800 series Stand-by Control \& Mute Control \& Load-Short Protection Application

## [STK433-800N-E series Stand-By Control Example]

[Feature]

- The pop noise which occurs to the time of power supply on/off can be improved substantially by recommendation Stand-By Control Application.
- Stand-By Control can be done by additionally adjusting the limitation resistance to the voltage such as micom, the set design is easy.
(Reference circuit) STK433-800N-E series test circuit To Stand-By Control added +5 V .

[Operation explanation] \#13pin Stand-By Control Voltage VST
(1) Operation Mode

The switching transistor in the bias circuit turns on and places the amplifier into the operating mode, when 13pin (VST) voltage added above 2.5 V (typ 3.0 V ).
(2) Stand-By Mode

When 13pin (VST) voltage is stopped $(=0 \mathrm{~V})$, the switching transistor in the bias circuit turn off, placing the amplifier into the standby mode.
(*1) The current limiting resistor must be used to ensure that stand-by pin (13pin) voltage does not exceed its maximum rated value VST max.
(*2) The pop noise level when the power is turned on can be reduced by setting the time constant with a capacitor in operating mode.
(*3) Determines the time constant at which the capacitor (*2) is discharged in stand-by mode.
