

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Advance Information Intelligent Power Module (IPM) 600 V, 10 A

The STK5Q4U362J-E is a fully-integrated inverter power stage consisting of a high-voltage driver, six IGBT's and a thermistor, suitable for driving permanent magnet synchronous (PMSM) motors, brushless-DC (BLDC) motors and AC asynchronous motors. The IGBT's are configured in a 3-phase bridge with separate emitter connections for the lower legs for maximum flexibility in the choice of control algorithm. The power stage has a full range of protection functions including cross-conduction protection, external shutdown and under-voltage lockout functions. An internal comparator and reference connected to the over-current protection circuit allows the designer to set the over-current protection level.

### Features

- Three-phase 10 A / 600 V IGBT module with integrated drivers
- Typical values :  $V_{CE(sat)} = 1.8\text{ V}$ ,  $V_F = 1.5\text{ V}$ ,  $E_{SW} = 390\text{ }\mu\text{J}$  at 10 A
- Compact 29.6 mm  $\times$  18.2 mm dual in-line package
- Cross-conduction protection
- Adjustable over-current protection level
- Integrated bootstrap diodes and resistors
- Enable pin
- Thermistor

### Typical Applications

- Industrial Pumps
- Industrial Fans
- Industrial Automation
- Home Appliances

## PIN FUNCTION DESCRIPTION

Pin	Name	Description
1	GND	Negative Main Supply
2	VDD	+15 V Main Supply
3	HINU	Logic Input High Side Gate Driver - Phase U
4	HINV	Logic Input High Side Gate Driver - Phase V
5	HINW	Logic Input High Side Gate Driver - Phase W
6	LINU	Logic Input Low Side Gate Driver - Phase U
7	LINV	Logic Input Low Side Gate Driver - Phase V
8	LINW	Logic Input Low Side Gate Driver - Phase W
9	FAULT	Fault output
10	ITRIP	Current protection pin
11	ENABLE	Enable input
12	RCIN	R, C connection terminal for setting FAULT clear time
13	TH1	Thermistor output 1
14	TH2	Thermistor output 2
17	NU	Low Side Emitter Connection - Phase U
18	NV	Low Side Emitter Connection - Phase V
19	NW	Low Side Emitter Connection - Phase W
20	W	W phase output. Internally connected to W phase high side driver ground
22	VBW	High Side Floating Supply Voltage for W phase
26	V	V phase output. Internally connected to V phase high side driver ground
28	VBV	High Side Floating Supply voltage for V phase
32	U	U phase output. Internally connected to U phase high side driver ground
34	VBV	High Side Floating Supply voltage for U phase
38	VP	Positive Bus Input Voltage

Note : Pins 15, 16, 21, 23, 24, 25, 27, 29, 30, 31, 33, 35, 36, 37 are not present

## ABSOLUTE MAXIMUM RATINGS (Notes 1, 2)

Rating	Symbol	Conditions	Value	Unit
Supply voltage	$V_{CC}$	VP to NU, NV, NW, surge < 500 V (Note 3)	450	V
Collector-emitter voltage	$V_{CE\ max}$	VP to U, V, W ; U to NU ; V to NV ; W to NW	600	V
Output current	$I_o$	VP, U, V, W, NU, NV, NW terminal current	$\pm 10$	A
		VP, U, V, W, NU, NV, NW terminal current, $T_c = 100^\circ\text{C}$	$\pm 5$	A
Output peak current	$I_{op}$	VP, U, V, W, NU, NV, NW terminal current, pulse width 1ms	$\pm 20$	A
Gate driver supply voltages	$V_{DD}, V_{BS}$	VBU to U, VBV to V, VBW to W, $V_{DD}$ to GND (Note 4)	-0.3 to +20.0	V
Input signal voltage	$V_{IN}$	HINU, HINV, HINW, LINU, LINV, LINW	-0.3 to $V_{DD}$	V
FAULT terminal voltage	$V_{FAULT}$	FAULT terminal	-0.3 to $V_{DD}$	V
RCIN terminal voltage	$V_{RCIN}$	RCIN terminal	-0.3 to $V_{DD}$	V
ITRIP terminal voltage	$V_{ITRIP}$	ITRIP terminal	-0.3 to +10.0	V
ENABLE terminal voltage	$V_{ENABLE}$	ENABLE terminal	-0.3 to $V_{DD}$	V
Maximum power dissipation	$P_d$	IGBT per 1 channel	31	W
Junction temperature	$T_j$	IGBT, Gate driver IC	150	$^\circ\text{C}$
Storage temperature	$T_{stg}$		-40 to +125	$^\circ\text{C}$
Operating case temperature	$T_c$	IPM case temperature	-20 to +100	$^\circ\text{C}$
Package mounting torque		Case mounting screw	0.6	Nm
Isolation voltage	$V_{is}$	50 Hz sine wave AC 1 minute (Note 5)	2000	$V_{rms}$

1. Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.
2. Refer to ELECTRICAL CHARACTERISTICS, RECOMMENDED OPERATING RANGES and/or APPLICATION INFORMATION for Safe Operating parameters.
3. This surge voltage developed by the switching operation due to the wiring inductance between VP and NU, NV, NW terminals.
4.  $V_{BS} = V_{BU}$  to U,  $V_{BV}$  to V,  $V_{BW}$  to W.
5. Test conditions : AC 2500 V, 1 s

## RECOMMENDED OPERATING RANGES (Note 6)

Rating	Symbol		Min	Typ	Max	Unit
Supply voltage	$V_{CC}$	VP to NU, NV, NW	0	280	400	V
Gate driver supply voltage	$V_{BS}$	VBU to U, VBV to V, VBW to W	12.5	15	17.5	V
	$V_{DD}$	$V_{DD}$ to GND (Note 4)	13.5	15	16.5	
ON-state input voltage	$V_{IN(ON)}$	HINU, HINV, HINW, LINU, LINV, LINW	3.0		5.0	V
OFF-state input voltage	$V_{IN(OFF)}$		0		0.3	
PWM frequency	fPWM		1		20	kHz
Dead time	DT	Turn-off to turn-on (external)	1			$\mu\text{s}$
Allowable input pulse width	PWIN	ON and OFF	1			$\mu\text{s}$
Package mounting torque		'M3' type screw	0.4		0.6	Nm

6. Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

# STK5Q4U362J-E

**ELECTRICAL CHARACTERISTICS** at  $T_c = 25^\circ\text{C}$ ,  $V_{BS} = 15\text{ V}$ ,  $V_{DD} = 15\text{ V}$  (Note 7)

Parameter	Test Conditions	Symbol	Min	Typ	Max	Unit

## APPLICATIONS INFORMATION

### Input / Output Timing Chart

Figure 12. Input/Output Timing Chart

### Notes

1. This section of the timing diagram shows the effect of cross-conduction prevention.
2. This section of the timing diagram shows that when the voltage on  $V_{DD}$  decreases sufficiently all gate output signals will go low, switching off all six IGBTs. When the voltage on  $V_{DD}$  rises sufficiently, normal operation will resume.
3. This section shows that when the bootstrap voltage  $V_{BS}$  drops, the corresponding high side output (U or V or W) is switched off. When  $V_{BS}$  rises sufficiently, normal operation will resume.
4. This section shows that when the voltage on ITRIP exceeds the threshold, all IGBT's are turned off. Normal operation resumes later after the over-current condition is removed.
5. After  $V_{DD}$  has risen above the threshold to enable normal operation, the driver waits to receive an input signal on the LIN input before enabling the driver for the HIN signal.

### Input / Output Logic Table

INPUT				OUTPUT			
HIN	LIN	Itrip	Enable	High side IGBT	Low side IGBT	U, V, W	FAULT
H	L	L	H	ON (Note 5)	OFF	VP	OFF

## Thermistor characteristics

Parameter	Symbol	Condition	Min	Typ	Max	Unit
Resistance	R <sub>25</sub>	T <sub>c</sub> = 25°C	99	100	101	kΩ
	R <sub>100</sub>	T <sub>c</sub> = 100°C	5.18	5.38	5.60	kΩ
B-Constant (25 to 50°C)	B		4208	4250	4293	K
Temperature Range			-40		+125	°C

Figure 13. Thermistor Resistance versus Case Temperature

Figure 14. Thermistor Voltage versus Case Temperature  
 Conditions : RTH = 39 kΩ, pull-up voltage 5.0 V (see Figure 2)

**Fault output**

The FAULT output is an open drain output requiring a pull-up resistor. If the pull-up voltage is 5 V, use a pull-up resistor with a value of 6.8 kΩ or higher. If the pull-up voltage is 15 V, use a pull-up resistor with a value of 20 kΩ or higher. The FAULT output is triggered if there is a V<sub>DD</sub> undervoltage or an overcurrent condition.

**Undervoltage lockout protection**

If V<sub>DD</sub> goes below the V<sub>DD</sub> supply undervoltage lockout falling threshold, the FAULT output is switched on. The FAULT output stays on until V<sub>DD</sub> rises above the V<sub>DD</sub> supply undervoltage lockout rising threshold. After V<sub>DD</sub> has risen above the threshold to enable normal operation, the driver waits to receive an input signal on the LIN input before enabling the driver for the HIN signal.

**Overcurrent protection**

An over-current condition is detected if the voltage on the ITRIP pin is larger than the reference voltage. There is a blanking time of typically 350 ns to improve noise immunity. After a shutdown propagation delay of typically 1.1 μs, the FAULT output is switched on. The FAULT output is held on for a time determined by the resistor and capacitor connected to the RCIN pin. If RCLR = 2 MΩ and CCLR = 1 nF, the FAULT output is switched on for 1.65 ms (typical).

The over-current protection threshold should be set to be equal or lower to 2 times the module rated current (IO).

An additional fuse is recommended to protect against system level or abnormal over-current fault conditions.

**Capacitors on High Voltage and V<sub>DD</sub> supplies**

Both the high voltage and V<sub>DD</sub> supplies require an electrolytic capacitor and an additional high frequency capacitor.

**Enable pin**

The ENABLE terminal pin is used to enable or shut down the built-in driver. If the voltage on the ENABLE pin rises above the ENABLE ON-state voltage the output drivers are enabled. If the voltage on the ENABLE pin falls below the ENABLE OFF-state voltage, the drivers are disabled.

**Minimum input pulse width**

When input pulse width is less than 1 μs, an output may not react to the pulse. (Both ON signal and OFF signal)

**Calculation of bootstrap capacitor value**

The bootstrap capacitor value CB is calculated using the following approach. The following parameters influence the choice of bootstrap capacitor:

- VBS : Bootstrap power supply. 15 V is recommended.
- QG : Total gate charge of IGBT at V<sub>BS</sub> = 15 V. 45 nC
- UVLO : Falling threshold for UVLO. Specified as 12 V.
- I<sub>D</sub>MAX : High side drive consumption current. Specified as 0.4 mA
- t<sub>ON</sub>MAX : Maximum ON pulse width of high side IGBT.

Capacitance calculation formula:

$$CB = (QG + I_{D_{MAX}} * t_{ON_{MAX}}) / (VBS - UVLO)$$

CB is recommended to be approximately 3 times the value calculated above. The recommended value of CB is in the range of 1 to 47 μF, however, the value needs to be verified prior to production. When not using the bootstrap circuit, each high side driver power supply requires an external independent power supply.

The internal bootstrap circuit uses a MOSFET. The turn on time of this MOSFET is synchronized with the turn on of the low side IGBT. The bootstrap capacitor is charged by turning on the low side IGBT.

If the low side IGBT is held on for a long period of time (more than one second for example), the bootstrap voltage on the high side MOSFET will slowly discharge.

Figure 15. Bootstrap capacitance versus t<sub>ON</sub>MAX

## Mounting Instructions

Item	Recommended Condition
Pitch	26.0 ±0.1 mm (Please refer to Package Outline Diagram)
Screw	Diameter : M3 Screw head types: pan head, truss head, binding head
Washer	Plane washer dimensions (Figure 16) D = 7 mm, d = 3.2 mm and t = 0.5 mm JIS B 1256
Heat sink	Material : Aluminum or Copper Warpage (the surface that contacts IPM) : -50 to 50 µm Screw holes must be countersunk. No contamination on the heat sink surface that contacts IPM.
Torque	Temporary tightening : 50 to 60% of final tightening on first screw Temporary tightening : 50 to 60% of final tightening on second screw Final tightening : 0.4 to 0.6 Nm on first screw Final tightening : 0.4 to 0.6 Nm on second screw
Grease	Silicone grease. Thickness : 50 to 100 µm Uniformly apply silicone grease to whole back. Thermal foils are only recommended after careful evaluation. Thickness, stiffness and compressibility parameters have a strong influence on performance.

Figure 16. Module Mounting details: components; washer drawing; need for even spreading of thermal grease
