

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

STLVD111

Programmable low voltage 1:10 differential LVDS clock driver

Features

- 100ps part-to part skew
- 50ps bank skew
- Differential design
- Meets LVDS spec. for driver outputs and receiver inputs
- Reference voltage available output V_{BB}
- Low voltage V_{CC} range of 2.375V to 2.625V
- High signalling rate capability (exceeds 622MHz)
- Support open, short and terminated input fail-safe (low output state)
- Programmable drivers power off control

Description

The STLVD111 is a low skew programmable 1 to 10 differential LVDS driver, designed for clock distribution. The select signal is fanned out to 10 identical differential outputs.

The STLVD111 is provided with a 11 bit shift register with a serial in and a Control Register. The purpose is to enable or power off each output clock channel and to select the clock input. The

STLVD111 is specifically designed, modelled and produced with low skew as the key goal. Optimal design and layout serve to minimize gate to gate skew within a device. The net result is a dependable guaranteed low skew device.

The STLVD111 can be used for high performance clock distribution in 2.5V systems with LVDS levels. Designers can take advantage of the device's performance to distribute low skew clocks across the backplane or the board.

Symbol	Parameter	Test condition	Min.	Typ.	Max.	Unit
f_{MAX}	Maximum frequency of shift register	<i>(Figure 9.)</i>	100	150		MHz
t_s	Clock to SI setup time	<i>(Figure 9.)</i>			2	ns
t_h	Clock to SI hold time	<i>(Figure 9.)</i>			1.5	ns
t_{rem}	Enable to clock removal time	<i>(Figure 9.)</i>			1.5	ns
t_w	Minimum clock pulse width	<i>(Figure 9.)</i>	3			ns

4 Specification of control register

The STLVD111 is provided with a 11 bit shift register with a Serial In and a Control Register. The purpose is to enable or power of each output clock channel and to select the clock input. The STLVD111 provides two working modality:

4.1 Programmed mode (EN=1)

The shift register have a serial input to load the working configuration. Once the configuration is loaded with 11 clock pulse, another clock pulse load the configuration into the control register. The first bit on the serial input line enables the outputs Q9 and Q9, the second bit enables the outputs Q8 and Q8 and so on. The last bit is the clock selection bit. To restart the configuration of the shift register a reset of the state machine must be done with a clock pulse on CK and the EN set to Low. The control register shift register can be configured on time after each reset.

4.2 Standard mode (EN=0)

In Standard Mode the STLVD111 isn't programmable, all the clock outputs are enabled. The LVDS clock input is selected from Clock 0 or Clock 1 with the SI pin as shown in the Truth Table below.

Table 10. Truth table of state machine inputs

EN	SI	CK	Output
L	L	X	All output enabled, Clock 0 selected, control register disabled
L	H	X	All output enabled, Clock 1 selected, control register disabled
H	L	┘	First stage stores "L", other stages store the data of previous stage
H	H	┘	First stage stores "H", other stages store the data of previous stage
L	X	┘	Reset of the state machine, shift register and control register

Table 11. Serial input sequence

BIT#10	BIT#9	BIT#8	BIT#7	BIT#6	BIT#5	BIT#4	BIT#3	BIT#2	BIT#1	BIT#0

6 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK[®] packages. These packages have a Lead-free second level interconnect. The category of second Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.
