

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Dual DC-DC converter for powering AMOLED display

Features

- Step-up and inverter converters
- Operating input voltage range from 2.5 V to 4.5 V
- Synchronous rectification for both DC-DC converters
- 150 mA maximum output current
- 4.6 V fixed positive output voltage
- Programmable negative voltage by S-wire from - 2.3 V to - 5.9 V
- Typical efficiency: 85 %
- Pulse skipping mode in light load condition ($I_O < 10$ mA)
- 1.6 MHz PWM mode control switching frequency ($I_O > 10$ mA)
- Enable pin for shutdown mode
- Low quiescent current: < 1 μ A in shutdown mode
- Soft-start with inrush current protection
- Over temperature protection
- Temperature range: -40 °C to 85 °C
- True shutdown mode
- Fast outputs discharge circuit after shutdown
- Package: DFN 12 leads - (3 x 3 mm)

Applications

- Active matrix organic LED power supply (AMOLED)
- Mobile phones

- PDAs
- Camcorders and digital still cameras

Description

The STOD02 is a dual DC-DC converter meant to power AMOLED displays. It integrates a step up and an inverting DC-DC converter making it particularly suitable for battery operated products, where the major concern is the overall system efficiency. STOD02 works in pulse skipping mode during low load condition and in PWM-mode (at 1.6 MHz) for medium/high load condition. The high frequency allows reducing the value and number of external components just to 6 components needed. The enable pin allows turning off the device so reducing the current consumption to less than 1 μ A. The negative output voltage can be programmed by an MCU through a dedicated pin which implements single-wire protocol. Soft-start with controlled inrush current limit and thermal shutdown are integrated functions of the device.

Table 2. Pin description

Pin n°	Symbol	Description
1	L _{X1}	Switching node of the step up converter
2	PGND	Power ground pin
3	V _{O1}	Step up converter output voltage
4	NC	Not connected
5	AGND	Signal ground pin. This pin must be connected to power ground pin
6	V _{REF}	External voltage reference
7	S-wire	Negative voltage setting pin, uses S-wire protocol
8	EN	Enable control pin. ON = V _I . When pulled low, the device goes in shutdown mode
9	V _{O2}	Inverting converter output voltage
10	L _{X2}	Switching node of the inverting converter
11	V _{INA}	Analog input supply voltage
12	V _{INP}	Power input supply voltage
	exposed pad	Internally connected to AGND. Exposed pad must be connected to AGND and PGND in the PCB layout in order to guarantee proper operation of the device.

3 Maximum ratings

Table 3. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V_{INA}, V_{INP}	DC supply voltage	-0.3 to 6	V
EN,S-wire	Enable pin, S-wire pin	-0.3 to 6	V
I_{LX2}	Inverting converter's switching current	Internally limited	A
L_{X2}	Inverting converter switching node	-10 to $V_{INP}+0.3$	V
V_{O2}	Inverting converter output voltage	-10 to GND+0.3	V
V_{O1}	Step-up converter output voltage	-0.3 to 6	V
L_{X1}	Step-up converter switching node	-0.3 to $V_{O1}+0.3$	V
I_{LX1}	Step up converter's switching current	Internally limited	A
V_{REF}	Reference voltage	-0.3 to 3	V
P_D	Power dissipation	Internally limited	mW
T_{st}	Storage temperature range	-65 to 150	°C
T_J	Maximum junction temperature	150	°C
ESD	ESD protection HBM	2	kV

Note: Absolute maximum ratings are those values beyond which damage to the device may occur. Functional operation under these condition is not implied.
