

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

**TRIPLE  
PECL-TO-ECL TRANSLATOR**

**SY100EL91**

**FEATURES**

- 620ps typical propagation delay
- Fully differential design
- Supports standard operation
- Available in 20-pin SOIC package

**DESCRIPTION**

The SY100EL91 is a triple PECL-to-ECL translator. It receives standard voltage PECL signals and translates them to different ECL output signals.

A  $V_{BB}$  output is provided for interfacing with single ended PECL signals at the input. If a single ended input is to be used, the  $V_{BB}$  output should be connected to the  $\bar{D}$  input. The active signal would then drive the D input. When used, the  $V_{BB}$  output should be bypassed to ground via a  $0.01\mu\text{F}$  capacitor. The  $V_{BB}$  output is designed to act as the switching reference for the EL91 under single ended input switching conditions. As a result this pin can only source/sink up to 0.5mA of current.

To accomplish the level translation the EL91 requires three power rails. The  $V_{CC}$  supply should be connected to the positive supply, and the  $V_{EE}$  pin should be connected to the negative power supply. The GND pins as expected are connected to the system ground plane. Both  $V_{EE}$  and  $V_{CC}$  should be bypassed to ground via  $0.01\mu\text{F}$  capacitors.

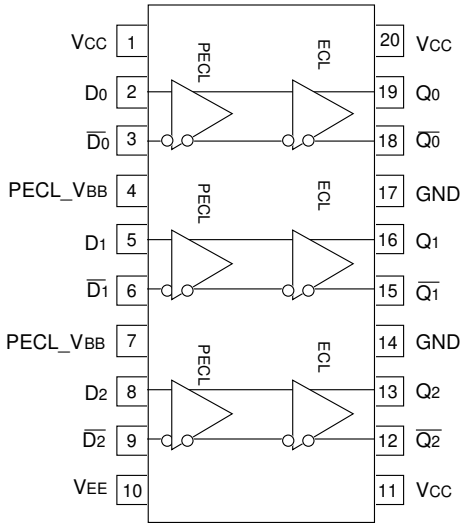

Under open input conditions, the  $\bar{D}$  input will be biased at  $V_{CC}/2$  and the D input will be pulled to GND. This condition will force the Q output to a LOW, ensuring stability.

**PIN NAMES**

Pin	Function
D <sub>n</sub>	PECL Inputs
Q <sub>n</sub>	ECL Outputs
PECL_V <sub>BB</sub>	PECL Reference Voltage Output

**PACKAGE/ORDERING INFORMATION**

**Ordering Information<sup>(1)</sup>**

**20-Pin Wide SOIC (Z20-1)**

Part Number	Package Type	Operating Range	Package Marking	Lead Finish
SY100EL91ZC	Z20-1	Commercial	SY100EL91ZC	Sn-Pb
SY100EL91ZCTR <sup>(2)</sup>	Z20-1	Commercial	SY100EL91ZC	Sn-Pb

SY100EL91ZITR <sup>(2)</sup>	Z20-1	Industrial	SY100EL91ZI	Sn-Pb
SY100EL91ZG <sup>(3)</sup>	Z20-1	Industrial	SY100EL91ZG with Pb-Free bar-line indicator	NiPdAu Pb-Free
SY100EL91ZGTR <sup>(2, 3)</sup>	Z20-1	Industrial	SY100EL91ZG with Pb-Free bar-line indicator	NiPdAu Pb-Free

**Notes:**

1. Contact factory for die availability. Dice are guaranteed at  $T_A = 25^\circ\text{C}$ , DC Electricals only.
2. Tape and Reel.
3. Pb-Free package is recommended for new designs.

$t_r$ $t_f$	Output Rise/Fall Times Q (20% to 80%)	320	400	580	320	400	580	320	400	580	320	400	580	ps

### Notes:

- Skew is measured between outputs under identical transitions.
- Minimum input swing for which AC parameters are guaranteed. The device has a DC gain of ~40.
- The CMR range is referenced to the most positive side of the differential input signal. Normal operation is obtained if the HIGH level falls within the specified range and the peak-to-peak voltage lies between  $V_{PP}$  min. and 1V.
