

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

(÷1, ÷2/3) OR (÷2, ÷4/6) CLOCK GENERATION CHIP

Precision Edge<sup>®</sup> SY100S838 SY100S838L

### **FEATURES**

- 3.3V and 5V power supply options
- 50ps output-to-output skew
- Synchronous enable/disable
- Master Reset for synchronization
- Internal 75K $\Omega$  input pull-down resistors
- Available in 20-pin SOIC package

#### TRUTH TABLE

CLK	EN	MR	Function					
Z	L	L	Divide					
ZZ	Н	L	Hold Q0-3					
Х	Х	Н	Reset Q0-3					

#### NOTES:

Z = LOW-to-HIGH transition ZZ = HIGH-to-LOW transition

FSEL	DIVSEL	Q <sub>0</sub> , Q <sub>1</sub> OUTPUTS	Q2, Q3 OUTPUTS
L	L	Divide by 2	Divide by 4
L	Н	Divide by 2	Divide by 6
Н	L	Divide by 1	Divide by 2
Н	Н	Divide by 1	Divide by 3

#### **PIN NAMES**

Pin	Function
CLK	Differential Clock Inputs
FSEL	Function Select Input
ĒN	Synchronous Enable
MR	Master Reset
VBB	Reference Output
Q0, Q1	Differential ÷1 or ÷2 Outputs
Q2, Q3	Differential ÷2/3 or ÷4/6 Outputs
DIVSEL	Frequency Select Input

Precision Edge®

### **DESCRIPTION**

The SY100S838/L is a low skew ( $\div$ 1,  $\div$ 2/3) or ( $\div$ 2,  $\div$ 4/6) clock generation chip designed explicitly for low skew clock generation applications. The internal dividers are synchronous to each other, therefore, the common output edges are all precisely aligned. The devices can be driven by either a differential or single-ended ECL or, if positive power supplies are used, PECL input signal. In addition, by using the VBB output, a sinusoidal source can be AC-coupled into the device. If a single-ended input is to be used, the VBB output should be connected to the CLK input and bypassed to ground via a  $0.01\mu F$  capacitor. The VBB output is designed to act as the switching reference for the input of the SY100S838/L under single-ended input conditions. As a result, this pin can only source/sink up to 0.5mA of current.

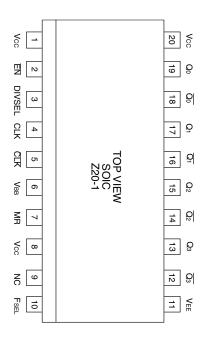

The Function Select (FSEL) input is used to determine what clock generation chip function is. When FSEL input is LOW, SY100S838/L functions as a divide by 2 and by 4/6 clock generation chip. However, if FSEL input is HIGH, it functions as a divide by 1 and by 2/3 clock chip.

The common enable (EN) is synchronous so that the internal dividers will only be enabled/disabled when the internal clock is already in the LOW state. This avoids any chance of generating a runt clock pulse on the internal clock when the device is enabled/disabled as can happen with an asynchronous control. An internal runt pulse could lead to losing synchronization between the internal divider stages. The internal enable flip-flop is clocked on the falling edge of the input clock, therefore, all associated specification limits are referenced to the negative edge of the clock input.

Upon start-up, the internal flip-flops will attain a random state; the master reset (MR) input allows for the synchronization of the internal dividers, as well as for multiple SY100S838/Ls in a system.

#### Notes:

- Parametric values specified at:
   5 volt Power Supply Range
   100S838 Series: -4.2V to -5.5V.
   3 volt Power Supply Range
   100S838L Series: -3.0V to -3.8V.
- 2. Skew is measured between outputs under identical transitions.
- 3. Minimum input swing for which AC parameters are guaranteed. The device will function reliably with differential inputs down to 100mV.
- 4. The CMR range is referenced to the most positive side of the differential input signal. Normal operation is obtained if the HIGH level falls within the specified range and the peak-to-peak voltage lies between VPP (min) and 1.0V. The lower end of the CMR range is dependent on VEE and is equal to VEE +1.65V.
