# mail

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## 5-BIT REGISTERED TRANSCEIVER

## FEATURES

- **25** $\Omega$  cut-off bus outputs
- **50** $\Omega$  receiver outputs
- Transmit and receive registers with separate clocks
- 1500ps max. delay from CLK1 to Bus Outputs (BUS)
- 1500ps max. delay from CLK2 to Receiver Outputs (Q)
- Individual bus enable pins
- Internal 75KΩ input pull-down resistors
- Voltage and temperature compensation for improved noise immunity
- Industry standard 100K ECL levels
- Extended supply voltage option: VEE = -4.2V to -5.5V
- Available in 28-pin PLCC package

## DESCRIPTION

The SY100S891 is a 5-bit registered transceiver containing five bus transceivers with both transmit and receive registers. The bus outputs (BUS0 - BUS4) are specified for driving a 25 ohm bus and the receive outputs  $(Q_0 - Q_4)$  are specified for driving a 50 ohm line. The bus outputs have a normal high level output voltage and a normal low level output voltage when the bus enable (BUSEN0 - BUSEN4) is high. However, the output is switched to a cut-off level when a bus-enable is low. This cut-off level is sufficiently low that a relatively high impedance is presented to the bus in order to minimize reflections. There is one bus-enable for each bus driver: a clock (CLK1) which is common to all five bus driver registers; and a separate clock (CLK2) which is common to all five receive registers. Data at the D inputs is clocked to the Bus register by a positive transition of CLK1 and data on the bus is clocked into the Receiver register by a positive transition of CLK2. A high on the Master Reset clears all registers.

### **PIN NAMES**

Pin	Function
BUSEN0-4	Bus Enable Inputs
D0 – D4	Data Inputs
CLK1	Bus Driver Clock Input
CLK2	Receive Register Clock
MR	Master Reset
Q0 – Q4	Bus Receive Outputs
BUS0-4	Bus Outputs

## **PACKAGE/ORDERING INFORMATION**

## **Ordering Information**

Part Number	Package Type	Operating Range	Package Marking	Lead Finish
SY100S891JC	J28-1	Commercial	SY100S891JC	Sn-Pb
SY100S891JCTR <sup>(1)</sup>	J28-1	Commercial	SY100S891JC	Sn-Pb
SY100S891JZ <sup>(2)</sup>	J28-1	Commercial	SY100S891JC with Pb-Free bar-line indicator	Matte-Sn
SY100S891JZTR <sup>(1, 2)</sup>	J28-1	Commercial	SY100S891JC with Pb-Free bar-line indicator	Matte-Sn

#### Notes:

1. Tape and Reel.

2. Pb-Free package is recommended for new designs.
