mail

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Low Voltage 1.2V/1.8V/2.5V CML 1:4 Fanout Buffer 6.4Gbps with Equalization

General Description

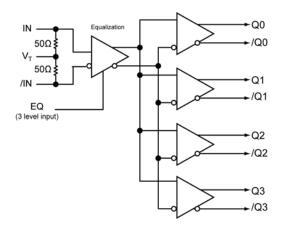

The SY56020R is a fully-differential, low-voltage 1.2V/1.8V/2.5V CML 1:4 Fanout Buffer with input equalization. The SY56020R can process clock signals as fast as 4.5GHz or data patterns up to 6.4Gbps.

The differential input includes Micrel's unique, 3-pin input termination architecture that interfaces to CML differential signals, without any level-shifting or termination resistor networks in the signal path. The differential input can also accept AC-coupled LVPECL and LVDS signals. Input voltages as small as 200mV ($400mV_{pp}$) are applied before the 9", 18" or 27" FR4 transmission line. For AC-coupled input interface applications, an internal voltage reference is provided to bias the V_T pin. The outputs are CML, with extremely fast rise/fall times guaranteed to be less than 90ps.

The SY56020R operates from a 2.5V \pm 5% core supply and a 1.2V, 1.8V or 2.5V \pm 5% output supply and is guaranteed over the full industrial temperature range (-40°C to +85°C). The SY56020R is part of Micrel's high-speed, Precision Edge[®] product line.

Datasheets and support documentation can be found on Micrel's web site at: <u>www.micrel.com</u>.

Functional Block Diagram

Features

- 1.2V/1.8V/2.5V CML 1:4 Fanout Buffer
- Equalizes 9, 18, 27 inches of FR4
- Guaranteed AC performance over temperature and voltage:
 - DC-to > 6.4Gbps Data throughput
 - DC-to > 4.5GHz Clock throughput
 - <280 ps propagation delay (IN-to-Q)
 - <15ps within-device skew
 - <90ps rise/fall times
- Ultra-low jitter design
 - <1ps_{RMS} random jitter
- High-speed CML outputs
- + 2.5V ±5% V_{CC} , 1.2/1.8V/2.5V ±5% V_{CCO} power supply operation
- Industrial temperature range: -40°C to +85°C
- Available in 16-pin (3mm x 3mm) QFN package

Applications

- Data distribution
- SONET clock and data distribution
- Fiber Channel clock and data distribution
- Gigabit Ethernet clock and data distribution

Markets

- Storage
- ATE
- Test and measurement
- Enterprise networking equipment
- High-end servers
- Metro area network equipment

Ordering Information

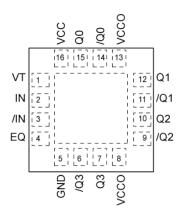

Part Number	Package Type	Operating Range	Operating Range Package Marking	
SY56020RMG	QFN-16	Industrial	R020 with Pb-Free bar-line indicator	NiPdAu Pb-Free
SY56020RMGTR ⁽²⁾	QFN-16	Industrial	R020 with Pb-Free bar-line indicator	NiPdAu Pb-Free

Notes:

1. Contact factory for die availability. Dice are guaranteed at $T_A = 25^{\circ}C$, DC Electricals only.

2. Tape and Reel.

Pin Configuration

16-Pin QFN

Truth Table

EQ	Equalization FR4 6mil Stripline
LOW	9"
FLOAT	18"
HIGH	27"

Pin Description

Pin Number	Pin Name	Pin Function	
2,3	IN, /IN	Differential Input: Signals as small as 200mV V _{PK} (400mV _{PP}) applied to the input of 9, 18 or 27 inches 6mil FR4 stripline transmission line are then terminated with this differential input. Each input pin internally terminates with 50Ω to the VT pin.	
1	VT	Input Termination Center-Tap: Each side of the differential input pair terminates to VT pin. This pin provides a center-tap to a termination network for maximum interface flexibility. An internal high impedance resistor divider biases VT to allow input AC-coupling. For AC-coupling, bypass VT with 0.1μ F low-ESR capacitor to V _{CC} . See "Interface Applications" subsection and Figure 2a.	
4	EQ	Three level input for equalization control. High, float, low.	
16	VCC	Positive Power Supply: Bypass with $0.1\mu F/0.01\mu F$ low-ESR capacitors as close to the V _{CC} pins as possible. Supplies input and core circuitry.	
8,13	VCCO	Output Supply: Bypass with $0.1\mu F/0.01\mu F$ low-ESR capacitors as close to the V _{CCO} pins as possible. Supplies the output buffers.	
5	GND, Exposed pad	Ground: Exposed pad must be connected to a ground plane that is the same potential as the ground pins.	
15,14	Q0, /Q0		
12,11	Q1, /Q1	CML Differential Output Pairs: Differential buffered copy of the input signal. The output swing is	
10,9	Q2, /Q2	typically 390mV. See "Interface Applications" subsection for termination information.	
7,6	Q3, /Q3

$V_{T_{IN}}$	Voltage from Input to V_T				1.28	V

Notes:

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum ratings conditions for extended periods may affect device reliability.

2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.

3. Package thermal resistance assumes exposed pad is soldered (or equivalent) to the device's most negative potential on the PCB. ψ_{JB} and θ_{JA} values are determined for a 4-layer board in still-air number, unless otherwise stated.

4. The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.

CML Outputs DC Electrical Characteristics⁽⁵⁾

 V_{CCO} = 1.14V to 1.26V R_L = 50 Ω to $V_{CCO,}$

 V_{CCO} = 1.7V to 1.9V, 2.375V to 2.625V, R_L = 50 Ω to V_{CCO} or 100 Ω across the outputs.

 V_{CC} = 2.375V to 2.625V; T_A = –40°C to +85°C, unless otherwise stated.

Symbol	Parameter	Condition	Min.	Тур.	Max.	Units
V _{OH}	Output HIGH Voltage	R_L = 50 Ω to V_{CCO}	$V_{CC}-0.020$	$V_{CC}-0.010$	Vcc	V
V _{OUT}	Output Voltage Swing	See Figure 3a	300	390	475	mV
Vdiff_ou t	Differential Output Voltage Swing	See Figure 3b	600	780	950	mV
R _{OUT}	Output Source Impedance		45	50	55	Ω

Three Level EQ Input DC Electrical Characteristics⁽⁵⁾

 V_{CC} = 2.375V to 2.625V; T_A = -40°C to +85°C, unless otherwise stated.

Symbol	Parameter	Condition	Min.	Тур.	Max.	Units
V _{IH}	Input HIGH Voltage		$V_{CC}-0.3$		V _{CC}	V
V _{IL}	Input LOW Voltage		0		V _{EE} + 0.3	V
IIH	Input HIGH Current	$V_{IH} = V_{CC}$			400	μA
IIL	Input LOW Current	V _{IL} = GND	-480			μA

Note:

5. The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.

AC Electrical Characteristics

 V_{CCO} = 1.14V to 1.26V R_L = 50 Ω to V_{CCO} ,

 V_{CCO} = 1.7V to 1.9V, 2.375V to 2.625V, R_{L} = 50 Ω to V_{CCO} or 100 Ω across the outputs,

$V_{CC} = 2.375$	/ to 2.625V; $T_A = -40^{\circ}C$ to +85°C,	unless otherwise stated.

Symbol	Parameter	Condition	Min.	Тур.	Max.	Units
f	Maximum Eroquanay	NRZ Data	6.4			Gbps
f _{MAX}	Maximum Frequency	V _{OUT} > 200mV Clock	4.5			GHz
t _{PD}	Propagation Delay IN-to-Q	Note 6, Figure 1	100	180	280	ps
4	Output-to-Output Skew	Note 7		3	15	ps
t _{Skew}	Part-to-Part Skew	Note 8			100	ps
t _{Jitter}	Random Jitter	Note 9			1	ps _{RMS}
t _r t _f	Output Rise/Fall Time (20% to 80%)	At full output swing.	20	50	90	ps

Notes:

6. Propagation delay is measured with no attenuating transmission line connected to the input.

9. Random jitter is measured with a K28.7 pattern, measured at $\leq f_{MAX}$.

^{7.} Output-to-Output skew is the difference in time between both outputs, receiving data from the same input, for the same temperature, voltage and transition.

^{8.} Part-to-part skew is defined for two parts with identical power supply voltages at the same temperature and no skew at the edges at the respective inputs.

Interface Applications

For Input Interface Applications see Figures 4a-e and for CML Output Termination, see Figures 5a-d.

CML Output Termination with VCCO 1.2V

For VCCO of 1.2V, Figure 5a, terminate the output with 50Ω to 1.2V, DC coupled, not 100Ω differentially across the outputs.

If AC-coupling is used, Figure 5d, terminate into 50Ω to 1.2V before the coupling capacitor and then connect to a high value resistor to a reference voltage.

Do not AC-couple with internally terminated receiver. For example, 50Ω ANY-IN input. AC-coupling will offset the output voltage by 200mV and this offset voltage will be too low for proper driver operation. Any unused output pair needs to be terminated when VCCO is 1.2V, do not leave floating.

CML Output Termination with VCCO 1.8V, 2.5V

For VCCO of 1.8V, Figure 5a and Figure 5b, terminate either with 50 ohms to VCCO or 100 ohms differentially across the outputs. AC- or DC-coupling is fine. For best signal integrity, terminate any unused output pairs.

Input Termination

From 1.8V CML driver: Terminate input with VT tied to 1.8V. Don't terminate 100 ohms differentially.

From 2.5V CML driver: Terminate input with either VT tied to 2.5V or 100 ohms differentially.

The input cannot be DC-coupled from a 1.2V CML driver.

Input AC-Coupling

The SY56020R input can accept AC-coupling from any driver. Bypass VT with a 0.1μ F low-ESR capacitor to VCC as shown in Figures 4c and 4d. VT has an internal high impedance resistor divider as shown in Figure 2a, to provide a bias voltage for AC-coupling.
