

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

SY58016L

**3.3V, 10Gbps Differential
CML Line Driver/Receiver
with Internal Termination**

General Description

The SY58016L is a high-speed, current mode logic (CML) differential receiver. It is ideal for interfacing with high frequency sources. It can be used as a Line Receiver, Line Driver, and Limiting Amplifier. The device can be operated from DC to 10Gbps. The input incorporates internal termination resistors, and directly interfaces to a CML logic signal. The output is CML compatible, and includes 50Ω load resistors.

Data sheets and support documentation can be found on Micrel's web site at: www.micrel.com.

Features

- Accepts up to 10.7Gbps data
- < 45ps edge rate
- Gain ≥ 4V/V
- CML/PECL differential inputs
- CML outputs
- Internal 50Ω input termination
- Internal 50Ω output load resistors
- Available in die or 16-pin (3mm x 3mm) MLF package

Applications

- Backplane buffering
- OC-3/OC-192 SONET clock or data distribution/driver
- All GigE clock or data distribution/driver
- Fibre Channel distribution/driver

1,4	D, /D	CML, PECL differential inputs with internal 50Ω pull-up resistors.
2,3,10,11	VTR	Transmission Line Return: Normally connected to the most positive supply.
6, 7, 14, 15 Exposed pad	VEE	Most negative supply. Exposed pad to be at the same electrical potential as VEE pins.
12, 9	Q, /Q	CML differential outputs with internal 50Ω pull-up resistors.
5, 8, 13, 16	VCC	Positive power supply: +3.3V nominal.

Notes:

1. Permanent device damage may occur if Absolute Maximum Ratings are exceeded. This is a stress rating only, and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.
2. The data sheet limits are not guaranteed if the device is operated beyond the operation ratings.
3. The device is guaranteed to meet the CD specifications, show in the table above, after thermal equilibrium has been established. The device is tested in a socket such that transverse airflow of ≥ 500 lfpm is maintained.
4. Junction-to-board resistance assumes exposed pad is soldered (or equivalent) to the devices most negative potential on the PCB.

Package Notes:

1. Package meets Level 2 Moisture Sensitivity Classification and is shipped in Dry-pack form.
2. Expose pad must be soldered to a ground for proper thermal management.
