

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# SY898530U

500MHz 1:16 3.3V-to-2.5/3.3V LVPECL  
Fanout Buffer

## General Description

The SY898530U is a 1:16 Fanout buffer which can accept most standard differential logic levels and outputs the signal as a differential 2.5V or 3.3V LVPECL signal. The part can amplify input signals as small as 150mVpp to the full LVPECL output swing. The SY898530U is well suited for clock distribution applications which demand versatility and low-skew performance. It is pin-to-pin compatible with IDT's ICS8530 fanout buffer.

The SY898530U operates from a 3.3V  $\pm 5\%$  core power supply and a 2.5V  $\pm 5\%$  or a 3.3V  $\pm 5\%$  output supply. The SY898530U is guaranteed over the full commercial temperature range (0°C to +70°C). It is available in a 48-pin TQFP lead-free package.

Data sheets and support documentation can be found on Micrel's web site at [www.micrel.com](http://www.micrel.com).

## Functional Block Diagram

## Features

- 16 Differential 2.5V/3.3V LVPECL outputs
- Differential CLK inputs. Accepts LVDS, LVPECL, LVHSTL, SSTL, HCSL logic levels
- Translates any single-ended input signal to 2.5/3.3V LVPECL levels with a resistor bias on /CLK input
- 500MHz maximum output frequency
- <50ps output skew
- <250ps part-to-part skew
- <2ns propagation delay
- 3.3V Core, 2.5/3.3V output operating supply
- 0°C to +70°C operating temperature
- Available in 48-pin TQFP package
- Pin-to-pin compatible with ICS8530

## Applications

- Data distribution
- High-performance PCs
- Communications
- Parallel processor-based systems

## Pin Configuration

48-Pin TQFP (TQFP-48)

## Pin Description

Pin Number	Pin Name	Pin Function
36, 37	CLK, /CLK	Differential Clock Inputs. Accepts LVDS, LVPECL, LVHSTL, SSTL, HCSL logic levels. CLK is internally connected to a pull-down resistor, /CLK is internally connected to a pull-up resistor. See "Pin Characteristics" for typical values.

**Notes:**

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum ratings conditions for extended periods may affect device reliability.
2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
3.  $\theta_{JA}$  and  $\theta_{JC}$  values are determined for a 4-layer board in still-air.
4. For single-ended applications, the maximum input voltage for CLK, /CLK is  $V_{CC} + 0.3V$ .
5. Common mode voltage is defined as  $V_{IH}$ .
6. The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.

## AC Electrical Characteristics

$V_{CC} = 3.135V$  to  $3.465V$ ,  $V_{CCO} = 2.375V$  to  $3.465V$ ,  $T_A = 0^{\circ}C$  to  $+70^{\circ}C$ , unless otherwise stated.

	Duty Cycle		47	50	53	%

### Notes:

7. Measured from the differential input crossing point to the differential output crossing point.
8. Output-to-Output skew is the difference in time between outputs, receiving data from the same input, for the same temperature, voltage and transition.
9. Part-to-part skew is defined for two parts with identical power supply voltages at the same temperature and no skew at the edges at the respective inputs.
10. This parameter is defined in accordance with JEDEC Standard 65.

## Typical Characteristics

$V_{CC} = 3.3V$ ,  $V_{CCO} = 2.5V$  or  $3.3V$ ,  $T_A = 25^\circ C$ , Input Signal =  $800mV$

## Junction Temperature

The maximum recommended junction temperature is  $T_J = 125^\circ\text{C}$ . The outputs are terminated with 50 ohms to  $V_{CC0} - 2V$ . Below is a calculation of the worst case scenario with zero airflow:

$T_J$  = Junction Temperature

$T_A$  = Ambient Temperature

$\Theta_{JA}$  = Junction-to-Ambient Thermal Resistance

$P_d$  = Power Dissipation

$$P_d = P_{d\_core} + P_{d\_outputs}$$

$$P_{d\_core} = V_{CC\_max} * I_{EE\_max}$$

$$P_{d\_core} = 3.465V * 125mA = 433mW$$

$$P_{d\_output} = P_{d\_h} + P_{d\_l}$$

$$P_{d\_h} = [(V_{oh} - (V_{CC0} - 2V))/R_L] * (V_{CC0} - V_{oh\_max})$$

$$P_{d\_h} = [(2V - 0.7V)/50\Omega] * 0.7V$$

$$P_{d\_h} = 18.2mW$$

$$P_{d\_l} = [(V_{ol} - (V_{CC0} - 2V))/R_L] * (V_{CC0} - V_{ol\_max})$$

$$P_{d\_l} = [(2V - 1.4V)/50\Omega] * 1.4V$$

$$P_{d\_l} = 16.8mW$$

$$P_{d\_output} = 35mW$$

$$P_{d\_outputs} = 16 * 35mW$$

$$P_{d\_outputs} = 560mW$$

$$P_d = 433mW + 560mW$$

$$P_d = 0.993 W$$

$$T_J = T_A + \Theta_{JA} * P_d$$

$$T_{J\_worst\_case} = 70^\circ\text{C} + 0.993W * 48^\circ\text{C/W}$$

$$T_{J\_worst\_case} = 118^\circ\text{C in still air.}$$

The worst case junction temperature is below 125 C.

## Output Interface Applications

**Notes:**

1. For +2.5V systems: R1 = 250Ω, R2 = 82.5Ω.

**Figure 2. Three-Resistor "Y-Termination"**

**Notes:**

1. Power-saving alternatives to Thevenin termination.
2. Place termination resistors as close to destination inputs as possible.
3. For +2.5V systems, R<sub>b</sub> = 19Ω. R<sub>b</sub> resistor sets the DC bias voltage, equal to V<sub>t</sub>.
