## **T3DSO1102:** 2 Channel 100 MHz **T3DSO1104:** 4 Channel 100 MHz **T3DSO1204:** 4 Channel 200 MHz

Teledyne Test Tools new T3DSO1000 Oscilloscopes feature two channel and four channel models. The two channel model is available with 100 MHz analog bandwidth, a single ADC with a 1 GSa/s maximum sample rate, and a single memory module with 14 Mpts of sample memory. The four channel scope is available in 100 and 200 MHz models and incorporates two 1 GSa/s ADCs and two 14 Mpts memory modules. When all channels are enabled, each channel has sample rate of 500 MSa/s and a standard record length of 7 Mpts. When only a single channel per ADC is active, the maximum sample rate is 1 GSa/s and the maximum record length is 14 Mpts.

For ease-of-use, the most commonly used functions can be accessed with its user-friendly front panel design.

The T3DSO1000 series employs a new generation of high speed display technology that provides excellent signal clarity, fidelity and performance. The system noise floor is also lower than similar products in the industry. It comes with a minimum vertical input range of 500 uV/div, an innovative digital trigger system with high sensitivity and low jitter, and a waveform capture rate of 400,000 frames/ sec (sequence mode). The T3DSO1000 also employs a 256-level intensity grading display function and a color temperature display mode not found in other models in this class. Teledyne Test Tools latest oscilloscope offering supports multiple powerful triggering modes including serial bus triggering. Serial bus decoding for IIC, SPI, UART, CAN, LIN bus types is included. The models also include History waveform recording, and sequential triggering that enable extended waveform recording and analysis.

Another powerful addition is the new 1 million point FFT math function that gives the T3DSO1000 very high frequency resolution when observing signal spectra. The new digital design also includes a hardware co-processor that delivers measurements quickly and accurately without slowing acquisition and front-panel response. The features and performance of Teledyne Test Tools new T3DSO1000 cannot be matched in this price class.

The four channel series includes even more functions, including: searching and navigating, on-screen Bode plot, 16 digital channels (Option), an external USB powered 25 MHz AWG module (Option), a USB WIFI adapter (Option), and an embedded application that allows remote control via web browser.

### **FUNCTION & CHARACTERISTICS**

## 7 inch TFT-LCD display and 10 one-button menus

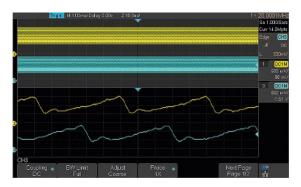

Front panel of the four channel series

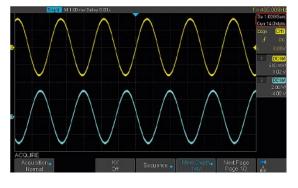

Front panel of the two channel series

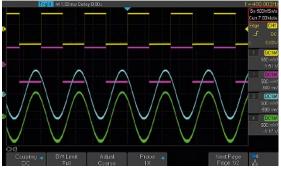

- 7-inch TFT-LCD display with 800 \* 480 resolution
- Most commonly used functions are accessible using 10 different one-button operation keys: Auto Setup, Default, Cursor, Measure, Roll, History, Persist, Clear
- Sweep, Zoom, Print

#### Record Length of Up to 14 Mpts (single channel/pair mode), 7 Mpts/CH (two channels/ pair mode)

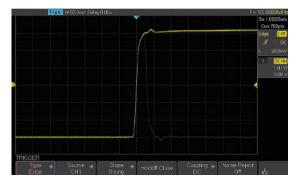

Using hardware-based Zoom technologies and max record length of up to 14 Mpts, users are able to over-sample to capture longer time periods at higher resolution and use the zoom feature to see more details within each signal. When all channels are enabled, each channel has a maximum sample rate of 500 MSa/s. When a single channel per pair is active, that channel has sample rate of 1 GSa/s

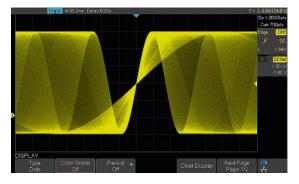

The four channel series has two 1 GSa/s ADC chips (channel 1 and 2 share one, channel 3 and 4 share another), so that each channel can achieve sample rates up to 500 MSa/and work on bandwidths of 200 MHz when all channels are enabled.

#### Waveform Capture Rate Up to 400,000 wfm/s

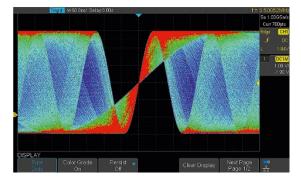

With a waveform capture rate of up to 400,000 wfm/s (sequence mode), the oscilloscope can easily capture the unusual or low-probability events.

#### 256-Level Intensity Grading and Color Temperature Display

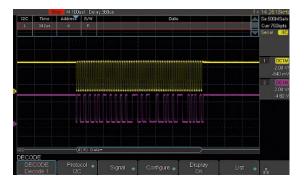

New display technology provides for fast refresh rates. The resulting intensity-graded trace is brighter for events that occur with more frequency and dims when the events occur with less frequency.

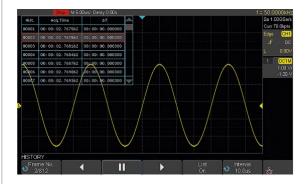

The color temperature display is similar to the intensitygraded trace function, but the trace occurrence is represented by different colors (color "temperature") as opposed to changes in the intensity of one color. Red colors represents the more frequent events, while blue is used to mark points that occur lest frequently.

#### **Serial Bus Decoding Function (Standard)**

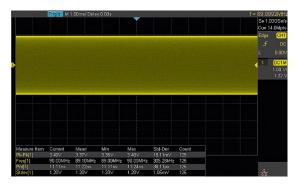

T3DSO1000 displays the decoding through the events list. Bus protocol information can be quickly and intuitively displayed in a tabular format.

## History Waveforms (History) Mode and Segmented Acquisition (Sequence)

Playback the latest triggered events using the history function. Segmented memory collection will store trigger events into multiple (Up to 80,000) memory segments, each segment will store triggered waveforms and timestamp each frame.

#### True measurement to 14 M points

At any one timebase, T3DSO1000 can measure using all 14 M sample points. This ensures the accuracy of measurements while the math coprocessor decreases measurement time and increases ease-of-use.

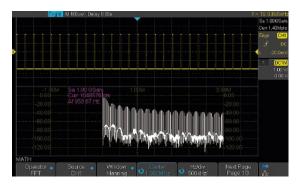

#### **Gate and Zoom Measurement**

Through Gate and Zoom measurement, the user can specify an arbitrary interval of waveform data analysis and statistics. This helps avoid measurement errors that can be caused by invalid or extraneous data, greatly enhancing the measurements' validity and flexibility.

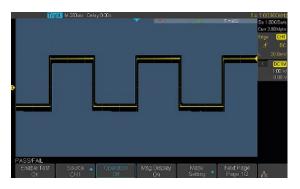

### **FUNCTION & CHARACTERISTICS**

#### **1 M points FFT**

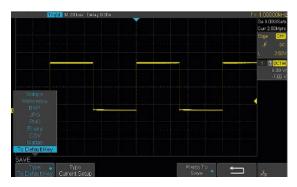

The new math co-processor enables FFT analysis of incoming signals using up to 1 M samples per waveform. This provides high frequency resolution with a fast refresh rate. The FFT function also supports a variety of window functions so that it can adapt to different spectrum measurement needs.

#### Hardware-Based High Speed Pass/Fail function

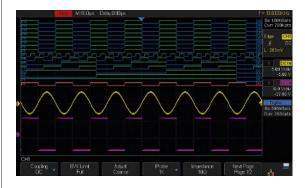

The T3DSO1000 utilizes a hardware-based Pass/Fail function, performing up to 40,000 Pass/Fail decisions each second. Easily generate user defined test templates provide trace mask comparison making it suitable for long-term signal monitoring or automated production line testing.

#### **Customizable Default Key**

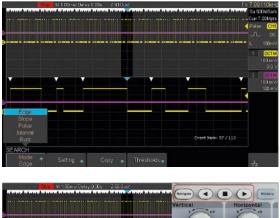

The current parameters of the oscilloscope can be preset to Default Key through the Save menu.

#### 16 Digital Channels/MSO (four channel series only, option)

16 digital channels enables users to acquire and trigger on the waveforms then analyze the pattern, simultaneously with one instrument. Color coded logic levels clearly differentiate high and low states.

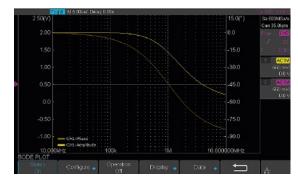

#### Search and Navigate (four channel series only)

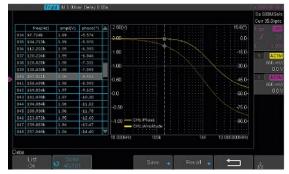

The T3DSO1000 4 channel series can search events specified by the user in a frame. It can also navigate by time (delay position) and historical frames.

#### **Bode Plot (four channel series only)**

T3DSO1000 can control the USB AWG module, control an independent Teledyne Test Tools T3AFG instrument, scan an object's amplitude and phase frequency response, and display the data as a Bode Plot. It can also show the result lists, and export the data to a USB disk.

#### USB WiFi Adapter (four channel series only, option)

WiFi control of instrumentation can provide a convenient and safe method of configuring and collecting data. This new feature works with a Teledyne Test Tools approved WiFi adapter to provide wireless control and communications with Teledyne Test Tools 4 channel scopes. The approved adapter is the TP-Link TL-WN725N (not supplied).

#### USB 25 MHz AWG Module (four channel series only, option)

The four channel series supports an optional USB 25 MHz function/arbitrary waveform generator that is operated from the USB host connection. Functions include Sine, Square, Ramp, Pulse, Noise, DC and 45 built-in waveforms. The arbitrary waveforms can be accessed and edited by the Teledyne Test Tools PC software.

#### **Complete Connectivity**

Back panel of the four channel series

#### Back panel of the two channel series

T3DS01000 supports USB Host, USB Device (USB-TMC), LAN(VXI-11), Pass/Fail and Trigger Out.

#### Web control (four channel series only)

With the new embedded web server, users can control the 4 channel scopes from a simple web page. This provides remote troubleshooting and monitoring capabilities.
