Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Industrial M8 and M12 Series Circular Connector

1. Scope

1.1 Contents

This specification covers the requirements for product performance, test methods and quality assurance provisions of M Series Connector family.

2. Applicable Documents :

The following documents form a part of this specification to the extent specified herein. In the event of conflict between the requirements of this specification and the product drawing, the product drawing shall take precedence. In the event of conflict between the requirements of this specification and the referenced documents, this specification shall take precedence.

2.1 TE Specifications:

- 501-106140: Qualification Test Report For M12 Screw Type Connector (T411XXXXXXX-XXX)
- 501-106140-1: Qualification Test Report For M12 Cable Assembly (T415XXXXXX-XXX and T416XXXXXXX-XXX)
- 501-106140-2: Qualification Test Report For M8 Cable Assembly (T405XXXXXX-XXX and T406XXXXXX-XXX)
- 501-106140-3: Qualification Test Report For M12 Panel mount (T413XXXXXX-XXX and T414XXXXXX-XXX and T417XXXXXXX-XXX)
- 501-106140-4: Qualification Test Report For M8 Screw Assembly (T401XXXXXX-XXX)

2.2 Commercial Standards and Specifications:

- IEC 61076-2-101: Detail specification for M12 connectors with screw-locking
- IEC 61076-2-104: Detail specification with M8 screw-locking or snap-locking
- IEC 60512: Electromechanical Components For Electronic Equipment; Basic Testing Procedure and Measuring Methods
- IEC-60529: Degree of Protection Provided by Enclosures(IP Code)

3.1 Design and Construction:

Product shall be of the design, construction and physical dimensions specified on the applicable product drawing.

3.2 Materials:

Material used in the construction of this product should be as specified on the applicable product drawing.

- 3.3 Ratings:
- 3.3.1 Electrical
 - A. Voltage Rating : M12: 250V (≤4 way)/60V (5 way)/30V (>5 way) M8: 60V (3 way)/30V (4 and 5 way)
 - B. Current Rating: Refer to Fig.3.
 - C. Temperature Rating : -25° C to 85° C
 - D. Insulation Resistance: $100M\Omega$ Min.
- 3.3.2 Environmental

Sealing Requirements: IP65/IP67 Durability: 100 cycles

3.4 Performance Requirements and Test Descriptions :

The product shall be designed to meet the electrical, mechanical and environmental performance requirements specified in Fig 1.

All tests shall be performed at the ambient environmental conditions per IEC 512, unless otherwise specified.

NOTE:

- (a) When the initial test group A has been completed, the specimens are divided in the 3 groups B, C, D. All connectors in each group shall undergo the tests specified for the relevant group numbers indicate sequence in which tests are performed.
- (b) It's allowed to perform with an additional specimen, extending the total number of specimen by 1.
- (c) First cycle
- (d) Remaining cycles
- (e) Test with additional specimen for over-molding type cable assembly
- (f) This test group should be tested without the screw nut

Plugs and receptacles should be prepared in accordance with applicable Instruction Sheet and should be elected at random from current production. Each test group shall consist of 3 specimens Min. unless otherwise stated.

B. Test Sequence

Qualification inspection shall be verified by testing specimens as specified in figure 2.

4.2 Requalification testing

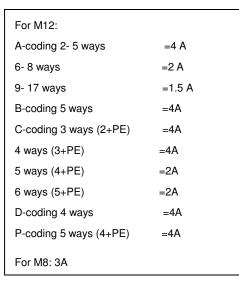

If changes significantly affecting form, fit or function are made to the product or manufacturing process or controlling industry specification, product assurance, shall coordinate requalification testing, consisting of all or part of the original testing sequence as determined by development/product, quality and reliability engineering.

4.3 Acceptance

Acceptance is based on verification that the product meets the requirements of Figure 1. Failures attributed to equipment, test setup or operator deficiencies shall not disqualify the product. If product failure occurs, corrective action shall be taken and samples resubmitted for qualification. Testing to confirm corrective action is required before resubmitted.

4.4 Quality conformance Inspection

The applicable quality inspection plan shall specify the sampling acceptable quality level to be used. Dimensional and functional requirements shall be in accordance with the applicable product drawing and this specification.
