

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

### Features

- Supply Voltage +4 to +36V
- Supply Current < 1.2mA
- Loss Resistance 5 to 50kΩ
- Oscillator Frequency < 1MHz
- Output Transistors  $I = 20\text{mA}$ ,  $V_{CE(\text{sat})} \leq 1.1\text{V}$

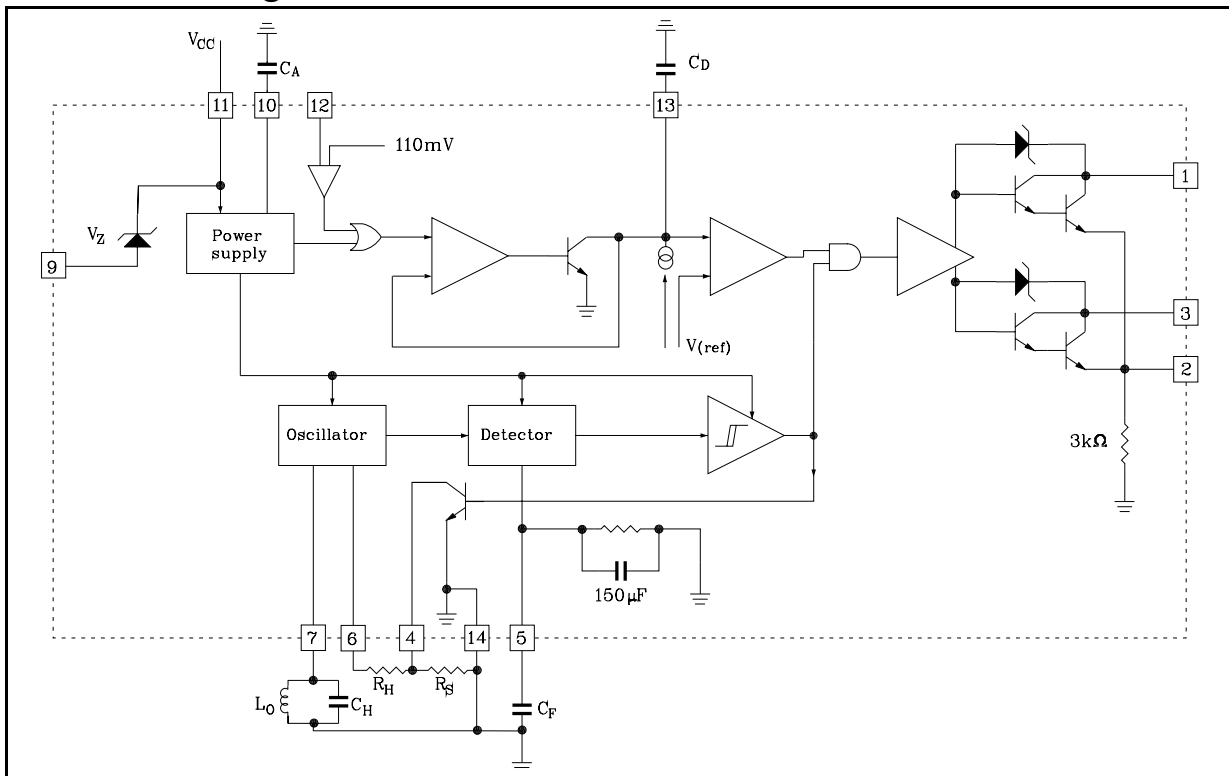

### Description

The TDE0160 is designed to detect metal bodies by the effect of Eddy currents on the HF losses of a coil. It has two complementary open collector outputs with peak limiting. Hysteresis is adjustable, and an electronic switching circuit is incorporated for disabling both outputs.

An internal zener diode maintains the supply voltage to the circuit in “dipole” operation.

### 3 Operating Mode

If  $I_C$  exceeds  $I_{CO} = V_{(ref)} / R_d$  the switch cuts off the output transistor and tests the value of current  $I_C$ , with time constant  $0.5C_d$ . On power up the internal start system cuts off the output transistors until  $V_{CC}$  reaches a value permitting normal operation of the circuit.
