

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

TEA6848H

## 1 FEATURES

- FM mixer 1 for conversion of FM RF (65 to 108 MHz and US weather band) to IF of 10.7 MHz; the mixer provides inherent image rejection; for European and US FM band/WB (weather band) the mixer is driven with a 'high' injection Local Oscillator (LO); in Japan FM band and East Europe FM band the mixer is driven with a 'low' injection LO
- AM mixer 1 for conversion of AM RF to AM IF1 of 10.7 MHz
- LC tuner oscillator providing mixer frequencies for FM mixer and AM mixer 1
- AM mixer 2 for conversion of AM IF1 to AM IF2 of 450 kHz
- Crystal oscillator providing mixer frequencies for AM mixer 2 and FM mixer 2 and reference for synthesizer PLL, IF count, timing for Radio Data System (RDS) update and reference frequency for car audio signal processor ICs
- Fast synthesizer PLL tuning system with local control for inaudible RDS updating
- Timing function for RDS update algorithm and control signal output for car audio signal processor ICs (TEA688x, SAA77xx, TEF689x)
- Digital alignment circuit for bus controlled matching of oscillator tuning voltage to FM antenna tank circuit tuning voltage
- AGC PIN diode drive circuit for FM RF AGC; AGC detection at FM mixer input; the AGC PIN diode drive can be activated by the I<sup>2</sup>C-bus as a local function for search tuning; AGC threshold is a programmable and keyed function switchable via the I<sup>2</sup>C-bus
- FM IF linear amplifier with high dynamic input range
- FM mixer 2 for conversion of FM IF1 to FM IF2 of 450 kHz with inherent image rejection
- Fully integrated dynamic selectivity and FM demodulator at IF2; improved sensitivity with dynamic threshold extension; centre frequency of IF2 selectivity alignment via the I<sup>2</sup>C-bus
- Level detector for AM and FM with temperature compensated output voltage; starting point and slope of level output is programmable via the I<sup>2</sup>C-bus

- AM cascode AGC stage and RF PIN diode drive circuit; AGC threshold detection at AM mixer 1 and IF2 AGC input; threshold for detection at mixer 1 input is programmable via the I<sup>2</sup>C-bus
- AM IF2 AGC and demodulator
- AM AF output switchable to provide AM IF2 for AM stereo decoder
- AM noise blanker with detection at IF1 and blanking at AM IF2
- Software controlled flag output
- Buffer output for weather band flag
- Adjacent channel detector, modulation detector and frequency offset for instantaneous bandwidth control of the integrated filter
- Flag and voltage output indicating the actual bandwidth
- I<sup>2</sup>C-bus alignment of centre frequency and gain variation as functions of bandwidth of the IF2 filter and centre frequency of the offset detector.

## 2 GENERAL DESCRIPTION

The TEA6848H is a single IC with car radio tuner for AM, FM and Weather Band (WB) intended for microcontroller tuning with the I<sup>2</sup>C-bus. It provides the following functions:

- AM double conversion receiver for LW, MW and SW (31 m, 41 m and 49 m bands) with IF1 = 10.7 MHz and IF2 = 450 kHz
- FM double conversion receiver with integrated image rejection for IF1 and for IF2 capable of selecting US FM, US weather, Europe FM, East Europe FM and Japan FM bands; fully integrated dynamic selectivity at 450 kHz FM IF2; FM demodulator with dynamic threshold extension; centre frequency alignment of IF2 selectivity via the I<sup>2</sup>C-bus
- The tuning system includes VCO, crystal oscillator and PLL synthesizer on one chip.

## 3 ORDERING INFORMATION

TYPE NUMBER	PACKAGE

## 6 PINNING

SYMBOL	PIN	DESCRIPTION
FMLIMDCFDB1	1	decoupling in-phase FM limiter
FMLIMDCFDB2	2	decoupling quadrature phase FM limiter
AMIF2DEC	3	decoupling for AM IF2 input
IREFFMIF2	4	reference current for FM IF2
AMNBHOLD	5	AM noise blanker threshold
AMIF2IN	6	AM IF2 input (450 kHz) for demodulator AGC and AM level detector
IF1GND	7	AM IF1 ground
FMMIX2IN	8	FM mixer 2 input
COFFSET	9	DC feedback for offset compensation RDS mute
FMMIX2DEC	10	FM mixer 2 decoupling
IFCDAATEST	11	test pin for IF centre DAA
IFAMPOUT	12	IF amplifier output (10.7 MHz)
V <sub>DDA1</sub>	13	analog supply voltage 1 (8.5 V) for FM IF amplifier
IFAMPIN	14	FM IF amplifier and AM mixer 2 input (10.7 MHz)
IFAMPDEC	15	FM IF amplifier and AM mixer 2 decoupling
IF2FILQ	16	test output quadrature phase FM IF2 filter
IF2FILI	17	test output in-phase FM IF2 filter
MIX1OUT1	18	FM mixer and AM mixer 1 IF output 1 (10.7 MHz)
MIX1OUT2	19	FM mixer and AM mixer 1 IF output 2 (10.7 MHz)
V <sub>DDA2</sub>	20	analog supply voltage 2 (8.5 V) for FM and AM RF
SWFLAG	21	output software programmable flag
AMMIX1DEC	22	AM mixer 1 decoupling
AMMIX1IN	23	AM mixer 1 input
VAMCASFB	24	feedback for cascode AM AGC
VAMCAS	25	cascode AM AGC
TAFAMAGC	26	AF time constant of AM front-end AGC
THFAMAGC	27	HF time constant of AM front-end AGC
IAMAGC	28	PIN diode drive current output of AM front-end AGC
V <sub>ref(MIX)</sub>	29	reference voltage for FM RF mixer
FMMIXIN1	30	FM RF mixer input 1
RFGND	31	RF ground
i.c.	32	internal connection
FMMIXIN2	33	FM RF mixer input 2
WBFLAG	34	buffered weather band flag output
IFMAGC	35	PIN diode drive current output of FM front-end AGC
TFMAGC	36	time constant of FM front-end AGC
TKEYEDAGC	37	time constant of keyed FM front-end AGC
DAAOUT	38	output of digital auto alignment circuit for antenna tank circuit
DAATD	39	temperature compensation diode for digital auto alignment circuit for antenna tank circuit
DAAIN	40	input of digital auto alignment circuit for antenna tank circuit

New In Car Entertainment car radio tuner IC with  
Precision Adjacent Channel Suppression (NICE-PACS)

TEA6848H

SYMBOL	PIN	DESCRIPTION
i.c.	41	internal connection
V <sub>tune</sub>	42	tuning voltage
CPOUT	43	charge pump output
V <sub>DDA3</sub>	44	analog supply voltage 3 (8.5 V) for tuning PLL
FREF	45	reference frequency output for signal processor IC
V <sub>DDD</sub>	46	digital supply voltage (5 V)
DGND	47	digital ground
VCOGND	48	VCO ground
OSCFDB	49	VCO feedback
OSCTNK	50	VCO tank circuit
V <sub>DDA4</sub>	51	analog supply voltage 4 (8.5 V) for VCO
MPXDCFDB	52	DC feedback for FM MPX signal path
AFSAMPLE	53	AF sample flag output for car audio signal processor IC
AFHOLD	54	AF hold flag output for car audio signal processor IC
TRDSMUTE	55	time constant for RDS update mute
AMAFIF2	56	AM demodulator AF output or IF2 output for AM stereo (multiplexed by I <sup>2</sup> C-bus)
RDSMPX	57	MPX output for RDS decoder and signal processor (not muted)
FMMPX	58	FM demodulator MPX output
V <sub>DDA5</sub>	59	analog supply voltage 5 (5 V) for on-chip power supply
MODDET	60	modulation detector input
V <sub>DDA6</sub>	61	analog supply voltage 6 (8.5 V) for on-chip power supply
IFBWFLAG	62	FM IF2 bandwidth flag output
SDA	63	I <sup>2</sup> C-bus data line input and output
SCL	64	I <sup>2</sup> C-bus clock line input
V <sub>IFBW</sub>	65	monitor voltage for FM IF2 bandwidth
IF2GND	66	AM IF2 ground
CINT	67	demodulator loop filter
MODETOUT	68	modulation detector output
TACD	69	adjacent channel detector time constant
V <sub>level(AMFM)</sub>	70	level voltage output for AM and FM
XTAL1	71	crystal oscillator 1
XTALGND	72	crystal oscillator ground
XTAL2	73	crystal oscillator 2
V <sub>level(ACD)</sub>	74	level voltage output for adjacent channel detector
ACDTHRES	75	adjacent channel detector threshold
IREF	76	reference current for power supply
AMMIX2OUT1	77	AM mixer 2 output 1 (450 kHz)
AMMIX2OUT2	78	AM mixer 2 output 2 (450 kHz)
CAGC	79	AM IF AGC capacitor/offset detector alignment (FM)
V <sub>ref(lim)</sub>	80	limiter reference voltage

TEA6848H

## 7 FUNCTIONAL DESCRIPTION

### 7.1 Oscillators

#### 7.1.1 VCO

The varactor tuned VCO provides the local oscillator signal for both FM and AM mixer 1. It has a frequency range of 162.9 to 248.2 MHz.

#### 7.1.2 PLL

Fast synthesizer PLL tuning system with local control for inaudible RDS updating.

#### 7.1.3 CRYSTAL OSCILLATOR

The crystal oscillator provides a 20.5 MHz signal that is used for:

- Reference frequency for frequency synthesizer PLL
- Local oscillator for AM mixer 2 and FM mixer 2
- Reference frequency for the IF counter
- Timing signal for the RDS update algorithm
- Reference frequency (75.368 kHz) for the TEA688x (car audio signal processor - CASP) or TEF689x (car radio integrated signal processor - CRISP).

### 7.2 DAA

To reduce the number of manual alignments in production the following I<sup>2</sup>C-bus controlled Digital Auto Alignment (DAA) functions are included:

- FM RF DAA
  - 7-bit DAA circuitry for the conversion of the VCO tuning voltage to a controlled alignment voltage for the FM antenna tank circuit
- FM and AM level DAA
  - Level DAA circuitry for alignment of slope (3-bit) and starting point (5-bit) of the level curve
- IF2 centre DAA
  - Centre frequency alignment (7-bit) of integrated FM IF2 dynamic selectivity.

### 7.3 FM signal channel

#### 7.3.1 FM MIXER 1

FM quadrature mixer converts FM RF (65 to 108 MHz and weather band) to IF of 10.7 MHz. The FM mixer provides inherent image rejection and high RF sensitivity.

It is capable of tuning the US FM, US weather, Europe FM, Japan FM and East Europe FM bands:

- US FM = 87.9 to 107.9 MHz
- US weather FM = 162.4 to 162.55 MHz
- Europe FM = 87.5 to 108 MHz
- Japan FM = 76 to 91 MHz
- East Europe FM = 65 to 74 MHz.

#### 7.3.2 BUFFER OUTPUT FOR WEATHER BAND FLAG (PIN WBFLAG)

The buffer output on pin WBFLAG is HIGH for weather band mode.

#### 7.3.3 FM KEYED AGC

The AGC threshold is programmable and the keyed AGC function is switchable via the I<sup>2</sup>C-bus. AGC detection occurs at the input of the first FM mixer. If the keyed AGC function is activated, the AGC is keyed only by the narrow band level. The AGC PIN diode drive can be activated via the I<sup>2</sup>C-bus as a local function for search tuning. The AGC sources a constant 10 mA current into the FM PIN diode in AM mode.

#### 7.3.4 FM IF AMPLIFIER

The FM IF amplifier provides 18 dB amplification with high linearity over a wide dynamic range.

#### 7.3.5 FM MIXER 2

The FM mixer 2 converts 10.7 MHz FM IF1 to 450 kHz FM IF2 in I and Q phase to achieve image rejection in the demodulator.

# New In Car Entertainment car radio tuner IC with Precision Adjacent Channel Suppression (NICE-PACS)

TEA6848H

## 7.3.6 FM IF2 DYNAMIC SELECTIVITY

The IF bandwidth of the FM IF2 is automatically adjusted depending on modulation and reception conditions. The centre frequency of the selectivity is adjusted by a 7-bit instruction via the I<sup>2</sup>C-bus. The dynamic selectivity mode and three fixed bandwidths (**60, 90 and 130 kHz**) can be selected via the I<sup>2</sup>C-bus. The IF2 bandwidth is set to **13 kHz** in weather band mode.

## 7.3.7 FM QUADRATURE DEMODULATOR

The FM quadrature demodulator is adjustment free.

## 7.3.8 ADJACENT CHANNEL DETECTOR AND THRESHOLD EXTENSION

In the event of breakthrough of a strong neighbouring transmitter, the IF2 bandwidth is reduced dynamically. At low RF input voltages and low modulation levels the IF2 bandwidth is reduced to achieve improved sensitivity by demodulator threshold extension.

## 7.3.9 BANDWIDTH CONTROL 'ACTIVE' FLAG (PIN IFBWFLAG)

Flag output IBFW = 1 from pin IFBWFLAG indicates that the IF2 bandwidth is reduced.

## 7.3.10 BANDWIDTH CONTROL MONITOR VOLTAGE (PIN V<sub>IFBW</sub>)

The actual bandwidth is indicated by a voltage at pin V<sub>IFBW</sub> that is proportional, not linear, to the IF bandwidth.

## 7.4 AM signal channel

### 7.4.1 AM TUNER INCLUDING MIXER 1 AND MIXER 2

The AM tuner is realized in a double conversion technique and is capable of selecting LW, MW and SW bands.

AM mixer 1 converts AM RF to IF1 of 10.7 MHz, while AM mixer 2 converts IF1 of 10.7 MHz to IF2 of 450 kHz:

- LW = 144 to 288 kHz
- MW = 530 to 1710 kHz (US AM band)
- SW = 5.73 to 9.99 MHz (including the 31 m, 41 m and 49 m bands).

## 7.4.2 AM RF AGC

The AM wideband AGC in front of the first AM mixer is realized first by a cascaded NPN transistor, which controls the transconductance of the RF amplifier JFET with 10 dB of AGC range. Second, an AM PIN diode stage with antenna type and frequency dependent AGC range is available. The minimum JFET drain source voltage is controlled by a DC feedback loop (pin VAMCASFB) in order to limit the cascode AGC range to 10 dB. If the cascode AGC is not required, a simple RF AGC loop is possible by using only a PIN diode. In this event pins VAMCASFB and VAMCAS have to be open-circuit. In FM mode, the cascade switches off the JFET bias current to reduce total power consumption. The PIN diode is biased by 1 mA in FM mode.

The AGC detection points for AM AGC are at the first AM mixer input (threshold programmable via the I<sup>2</sup>C-bus) and the IF2 AGC input (fixed threshold).

## 7.4.3 AM DETECTOR

The AM output provides either a detected AM AF or the corresponding AM IF2 signal. The IF2 signal can be used for AM stereo decoder processing. Soft mute function is controlled by the I<sup>2</sup>C-bus in AM mono mode.

## 7.4.4 AM NOISE BLANKER

The detection point for the AM noise blanker is the output stage of AM mixer 1, while blanking is realized at the output of the mixer 2.

Trigger sensitivity can be modified by adding an external resistor at pin AMNBHOLD.

## 7.5 FM and AM level detector

FM and AM level detectors provide the temperature compensated output voltage. The starting points and slopes of the level detector outputs are programmable via the I<sup>2</sup>C-bus.

# New In Car Entertainment car radio tuner IC with Precision Adjacent Channel Suppression (NICE-PACS)

TEA6848H

## 7.6 IF2 filter gain alignment

The 4-bit filter gain alignment reduces the change in IF filter gain spread when the bandwidth is changed in dynamic mode from 155 kHz (maximum) to 25 kHz (minimum).

A frequency has to be chosen in the middle of European/US FM band, Japan band or OIRT band (for East Europe) and the IC has to be set into dynamic bandwidth mode (IF2 bandwidth is 155 kHz).

Setting and clearing the FMBW bit continuously allows the adjustment of the gain alignment to minimum change in AM/FM DC level.

## 7.7 Frequency offset detector/alignment

A very strong undesired neighbouring signal causes offset in the demodulator in case of weak desired input signal.

The frequency offset detector reduces the bandwidth of the IF2 filter when the detected offset in the demodulator is too large.

There are four bits available for frequency offset detector alignment. Every band has to be aligned separately. Tuning has to be set to middle of the band, input signal unmodulated, bit IFBW = 1 (alignment voltage will be given to pin IFBWFLAG). The DC voltage at pin IFBWFLAG has to be aligned to the minimum value.

## 8 LIMITING VALUES

In accordance with the Absolute Maximum Rating System (IEC 60134).

SYMBOL	PARAMETER	CONDITIONS	MIN.	MAX.	UNIT
$V_{DDA1}$	analog supply voltage 1 for FM IF amplifier		-0.3	+10	V
$V_{DDA2}$	analog supply voltage 2 for FM and AM RF		-0.3	+10	V
$V_{DDA3}$	analog supply voltage 3 for tuning PLL		-0.3	+10	V
$V_{DDA4}$	analog supply voltage 4 for voltage controlled oscillator		-0.3	+10	V
$V_{DDA5}$	analog supply voltage 5 for on-chip power supply		-0.3	+6.5	V
$V_{DDA6}$	analog supply voltage 6 for on-chip power supply		-0.3	+10	V
$V_{DDD}$	digital supply voltage		-0.3	+6.5	V
$\Delta V_{DD8.5-DD5}$	difference between any 8.5 V supply voltage and any 5 V supply voltage	note 1	-0.3	-	V
$T_{stg}$	storage temperature		-55	+150	°C
$T_{amb}$	ambient temperature		-40	+85	°C
$V_{es}$	electrostatic handling voltage	note 2	-200	+200	V
		note 3	-2000	+2000	V

### Notes

- To avoid damage and wrong operation it is necessary to keep all 8.5 V supply voltages at a higher level than any 5 V supply voltage. This is also necessary during power-on and power-down sequences. Precautions have to be provided in such a way that interference cannot pull down the 8.5 V supply below the 5 V supply.
- Machine model ( $R = 0 \Omega$ ,  $C = 200 \text{ pF}$ ).
- Human body model ( $R = 1.5 \text{ k}\Omega$ ,  $C = 100 \text{ pF}$ ).
