

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Features

- Identification Transponder in Plastic Cube
- Basic Component: e5530 IDIC®
- Includes Coil and Capacitor for Tuned Circuit Antenna
- Carrier Frequency: 125 kHz

Application

- Car Immobilizer
- Access Control
- Alarm Systems
- Other Identification Systems

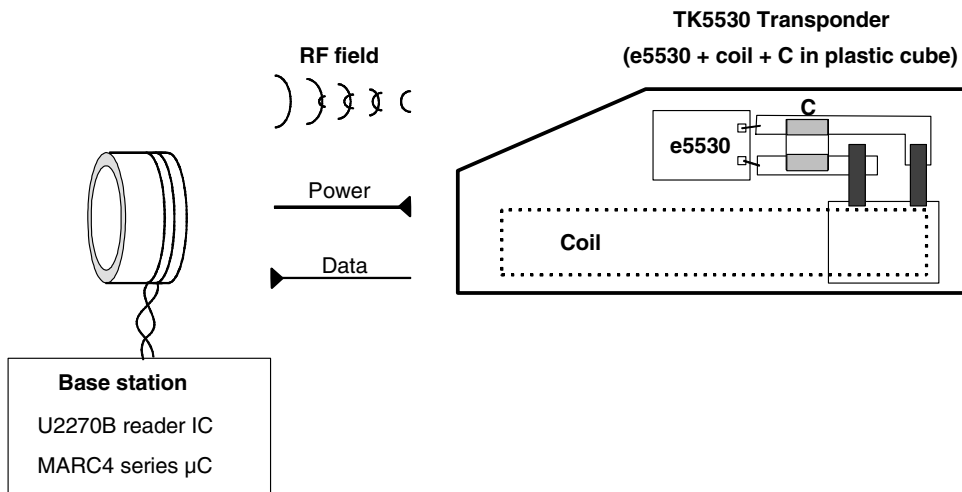

Description

The TK5530 is a complete transponder, which implements all important functions for immobilizer and identification systems. It consists of a plastic cube which accommodates the read-only **ID**entification **I**ntegral **C**ircuit (IDIC®) e5530 and the antenna is realized by a LC-circuit.

The identifying data are stored in a 128 bit PROM on the e5530, realized as an array of laser-programmable fuses. The logic block diagram for the e5530 is shown in Figure 1. The data are sent bit-serially as a code.

Any attempt to fake the base station with a wrong transponder will be recognized immediately.

System Block Diagram

Read-only Transponder

TK5530

General

The transponder consists of a plastic cube which accommodates following components:

- Read-only IDIC[®] with ROM (e5530)
- Antenna realized as tuned LC-circuit

Read-Only IDIC[®] with ROM (e5530)

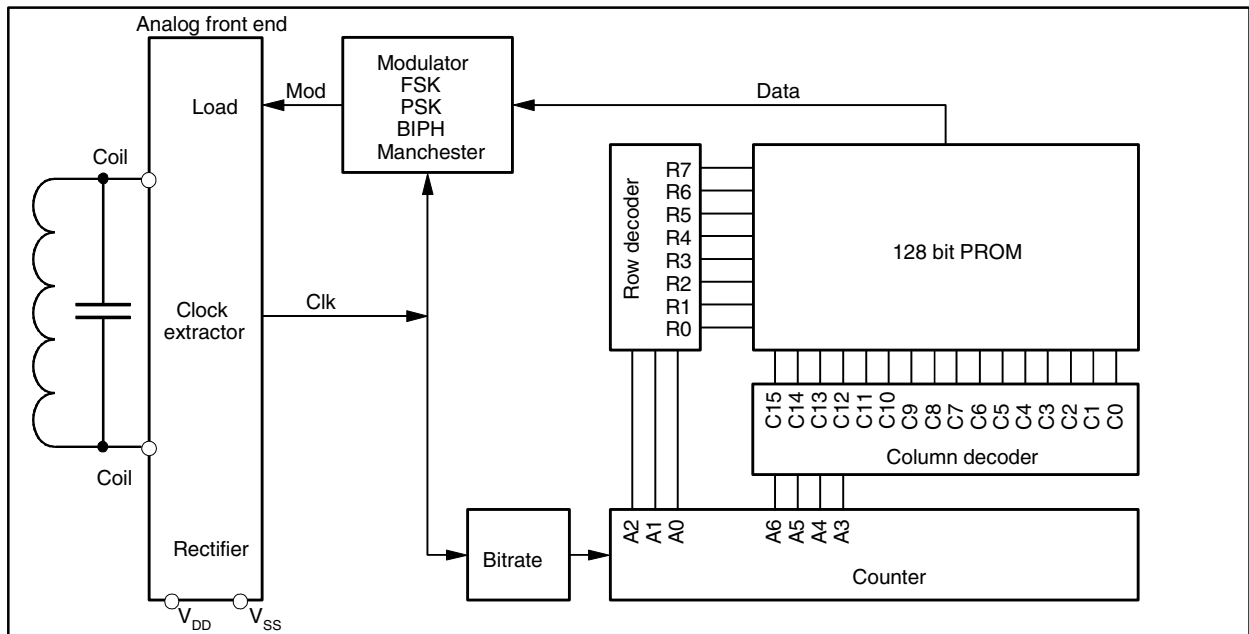

The e5530 is part of a closed coupled identification system (see 'System Block Diagram'). It receives power from a RF transmitter (reader) which is coupled inductively to the IDIC. The TK5530 transponder operates at a nominal frequency of 125 kHz. Receiving RF, the IDIC responds with a data stream by damping the incoming RF via an internal load. This damping in turn can be detected by the reader. The identifying data are stored in a 128-bit PROM on the e5530, which is factory programmed with a unique code (see specification of the e5530).

The e5530 has several possible options regarding modulation, bitrate, memory size etc.

Antenna

The antenna consists of a coil and a capacitor for tuning the circuit to the nominal carrier frequency of 125 kHz. The coil has a ferrite-core for improving the readout distance.

Figure 1. Block Diagram

Absolute Maximum Ratings

Parameter	Symbol	Value	Unit
Operating temperature range	T_{amb}	-40 to +85	°C
Storage temperature range	T_{stg}	-40 to +125	°C
Assembly temperature $t < 5$ min	T_{ass}	170	°C
Magnetic field strength at 125 kHz	H_{pp}	1000	A/m

Operating Characteristics Transponder

$T_{amb} = 25^{\circ}\text{C}$, $f = 125$ kHz unless otherwise specified

Parameters	Test Conditions	Symbol	Min.	Typ.	Max.	Unit
Inductance		L		3.95		mH
LC circuit, $H_{pp} = 20$ A/m						
Resonance frequency	Room temperature	f_r	121.4	125	129.2	kHz
Resonance frequency	$T_{amb} = -40$ to $+85^{\circ}\text{C}$	f_r	120.0		131.0	kHz
Quality factor		Q_{LC}		13		
Magnetic Field Strength (H)						
Max. field strength where tag does not modulate	No influence to other tags in the field	$H_{pp\ not}$		2		A/m
Field strength for operation	$T_{amb} = -40^{\circ}\text{C}$	$H_{pp\ -40}$		30		A/m
Field strength for operation	$T_{amb} = 25^{\circ}\text{C}$	$H_{pp\ 25}$		18		A/m
Field strength for operation	$T_{amb} = 85^{\circ}\text{C}$	$H_{pp\ 85}$		17		A/m
Maximum field strength		$H_{pp\ max}$			600	A/m
Modulation Range (see also H-DV curve)						
Modulation range	$H_{pp} = 20$ A/m $H_{pp} = 30$ A/m $H_{pp} = 50$ A/m $H_{pp} = 100$ A/m	DV		4.0 6.0 8.0 8.0		V

Figure 2. Typical T_K -range of Resonance Frequency

Figure 3. Typical H-DV Curve

Figure 4. Measurement of the Modulation Range DV

Output voltage of the testing application (see figure 6 and 7)

$DV = V1 - V_{mod}$

Measurement Assembly

All parameters are measured in a Helmholtz-arrangement, which generates a homogeneous magnetic field (see Figure 5 and Figure 6). A function generator drives the field generating coils, so the magnetic field can be varied in frequency and field strength.

Figure 5. Testing Application

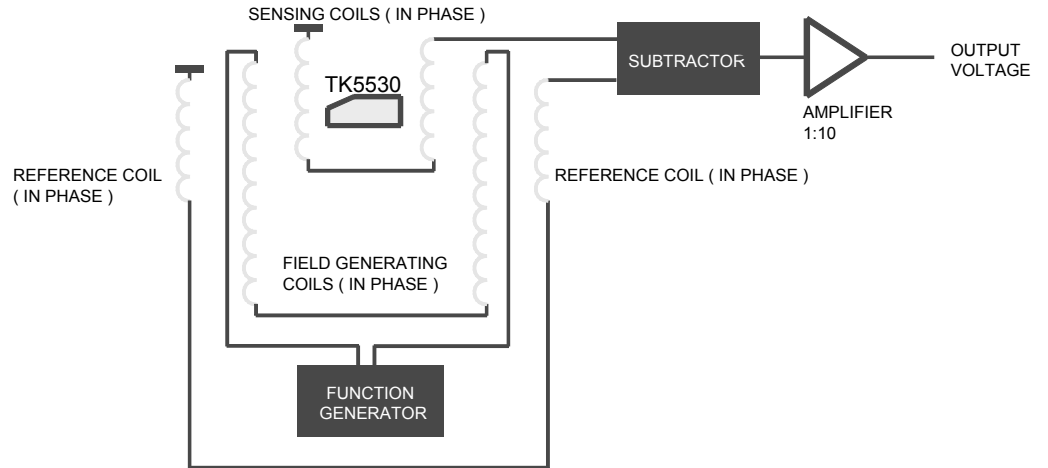

Figure 6. Testing Geometry

IDIC® (Reference Data Sheet e5530)

Memory size maximum	128 Bit (details see “Coding”)
Memory type	ROM
Programming	Laser cutting
Data rate	RF/32 - RF/64
Encoding	Manchester or Bi-phase
Modulation	AM
Maximum coil voltage (internally limited) V_{pp} (I = 5 mA)	16 V

Coding

The memory of the TK5530 can be selected to be a 64- or 128-bit rolling code. In the non-standard version, the first 8 bits are a customer-specific pattern. This can be selected by the customer, provided that Atmel agrees to the customer’s proposal. This pattern is unique within the serial rolling code data stream. The ID code and further bit informations following the 8-bit header can also be defined within the customer’s specification.

The set-up of a suitable coding scheme can be provided on customer’s request.

Read Distance

The maximum distance between the base station and the TK5530 mainly depends on the base station, the coil geometries and the modulation options chosen (see U2270B Antenna Design Hints and the U2270B data sheet). When generating an appropriate field with a suitable reader technique, a distance of 10 cm and more can be obtained. When using the Atmel U2270B demo board, the typical distances in the range of 0 to 5 cm can be achieved. Maximum distance values which are generally valid can not be given in this data sheet. The exact measuring of the maximum distance should be carried out with the TK5530 being integrated into the specific application.

Ordering Information

Extended Type Number	Modul.	Data Rate	Con-figuration	Check-sum	Header	ID Code	SPQ (Minimum Volume)	Minimum Order Volume
TK5530HM-232-PP	Manch.	RF/32	64 bit	no check-sum	E6	fixed and unique code	10 kpcs	>1 kpcs (per order, from stock)
TK5530HM-zzz-PP	defined by customer							> 300 kpcs p.a.

- Note:
- 1) Definition of customized part number basing on orders for first year volume (300 kpcs)
 - 2) Definition of header, ID code, checksum etc. according to customers data base
 - 3) 8.000 US\$ initial cost for metal mask
 - 4) Lead time 5 month
 - 5) Low volume customized application can be covered by TK5550F-PP programming, for identical application, as TK5530H-zzz-PP.
