

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## True RMS Bench Multimeter 5492B

USB (standard) 

RS232 (standard) 

GPIB  
(5492BGPIB only) 

### True RMS Bench Multimeter

The B&K Precision model 5492B is a versatile 5½-digit, 120,000-count bench multimeter suitable for applications in education, service repair, and manufacturing. The instrument enhances your productivity with built-in math functions and USB connectivity. Rel, Max/Min, dBm, dB, %, and Hold functions provide educators with a convenient tool to teach basic math concepts. Additionally, the 5492B offers powerful features not commonly found in other 5½-digit DMMs such as advanced triggering, buffer storage operation, and a GPIB interface option.

The 5492B measures volts and amps with great accuracy and stability, with basic VDC accuracy of 0.01%. The meter is also capable of measuring frequency, period, resistance, continuity, and performing diode tests. Readings can be taken at a maximum rate of 57 readings/sec and stored to an internal 512-byte buffer for post acquisition statistical analysis.

The 5492B was designed for cost-conscious users requiring an accurate meter with a broad range of features offered at a value price.

### Features & benefits

- 5½-digit, 120,000-count display resolution
- 0.01% basic VDC accuracy
- Advanced triggering options such as external, bus and event trigger
- Two and four-wire resistance measurement up to 120 MΩ
- AC voltage and AC current measurement over wide frequency range (ACV 100 kHz/ACI 10 kHz)
- AC (RMS) and DC current measurements up to 12 A
- Limit mode for Pass/Fail testing
- Save/recall up to 10 instrument settings
- Built-in math functions: Rel, Max/Min, dBm, dB, %, Hold, Compare
- CAT I (1000 V)/CAT II (300 V) protection
- USB (Virtual Com) and RS232 interface
- SCPI compatible

### Increase Productivity with PC Connectivity

The 5492B is programmable via USB, RS232, and GPIB (5492BGPIB only) interface using industry standard SCPI commands. Users can remotely control and configure the instrument from a PC and retrieve measurement results for further analysis. The multimeter can also be remotely controlled using application software (via USB & RS232), which supports front panel emulation and data logging of measurement results.

### ▲ Versatile tools

#### Limit Operation

The limit operation lets you set and control the values that determine a HI / IN / LO status of subsequent measurements. The meter can be configured to emit an audible alarm when readings are outside of the configured limit.

#### Advanced Triggering

A variety of advanced trigger options are available: Manual Trigger via a front panel button press, Bus Trigger sending a \*TRG command via PC interface, External Trigger using the EXT TRIG input terminal on the rear panel. Additionally, a trigger delay can be programmed after an event detection, and a VM Comp output is available to indicate the instrument's completion of a present measurement.

#### Fast Buffering with Built-in Statistics

The 5492B provides an internal buffer capable of storing up to 512 readings. Buffer storage operation can be enabled via front panel or remote command. The buffer fills up with the requested number of readings at a rate of up to 57 readings/sec and then stops. The instrument automatically calculates statistical information based on the stored readings such as minimum, maximum, or average reading, and standard deviation, which can then be retrieved along with the readings via the front panel or remote command.

### ▲ Easy operation

## Specifications

### Specifications are based on the following conditions:

- One year calibration cycle
- Operating temperature between 18 °C to 28 °C
- Accuracy expressed as:  $\pm$  (% of reading + % of range) after 30 minutes warm-up and valid for 10 PLC (Slow)
- Temperature coefficient: add  $\pm$  [0.1%  $\times$  (applicable accuracy)/°C] for 0 °C to 18 °C and 28 °C to 40 °C
- Relative humidity: Up to 80% RH for 0 °C to 28 °C (75% RH for 10 M $\Omega$  and above ranges for resistance measurement), up to 70% RH for 28 °C to 40 °C

### DC Voltage

Resolution, Full Scale Reading and Accuracy $\pm$ (% of reading + % of range), 23 °C $\pm$ 5 °C

(1) Specifications are for sine wave inputs >5% of range  
(2)  $\leq 3 \times 10^7$  Volt-Hz for 750 V range  
(3) 1% overrange (757.5V) is readable at 750 V range

Measurement method: AC coupled true RMS, measuring the AC component only

Maximum Crest factor: 3.0 at full scale

Input impedance: 1 M $\Omega$   $\pm$  2% in parallel with capacitance < 100 pF

Input protection: 750 Vrms, 500 Vdc

### DC Current

Resolution, Full Scale Reading and Accuracy $\pm$ (% of reading + % of range), 23 °C $\pm$ 5 °C				
Range	Resolution	Full Scale Reading	Accuracy (1 year)	Burden Voltage <sup>(1)</sup> & Shunt Resistor

12.0000 A <sup>(3)</sup>	100 $\mu$ A	11.9999	0.25+0.004	<0.15 V / 10 m $\Omega$

(1) Typical voltage across the input terminals at full scale reading  
(2) Use REL function  
(3) In 12 A range, > 10~12 ADC is readable for 20 seconds maximum

Input protection: Externally accessible 2A / 250V fuse protecting the low input current terminal (LO).

Internally accessible 20A / 250V fuse protecting the high current input terminal (10A)

120.000 MΩ	1 kΩ	119.999	7.0/(10M+Rx) μA	0.50 +0.008

(1) In order to eliminate the noise interference, which might be induced to the test leads, it is recommended to use a shielded test cable for measuring resistance above 120 kΩ  
(2) Using REL function

Input protection: 1000 Vdc or 750 Vac for all ranges

Note: Rx is the measured resistance value

### Continuity
