

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

3M™ Scotch-Weld™ Structural Adhesives

A man in a dark polo shirt stands in a workshop setting, holding a rolled-up set of blueprints in his left hand. He is gesturing with his right hand towards a wireframe globe that displays three-dimensional models of industrial structures like tanks and pipes. To his left, a tube of 3M Scotch-Weld Acrylic Low Odor Adhesive DP8805 NS Green is shown, along with various hardware components like bolts and nuts. The background features a large industrial facility with a metal door and a hexagonal patterned floor.

3M

Improving Product and Process

In today's world, successful new products demand advancements in both design and manufacturing processes. Industrial engineering and design professionals around the world depend on 3M Scotch-Weld Structural Adhesives to help them design beyond the limits of mechanical fasteners to create next generation products.

Trusted Innovations from Aerospace to Office Space

With over 50 years of experience developing innovative structural adhesives for aerospace, automotive and hundreds of other industries, 3M delivers the solutions you can trust. Our advanced formulations create durable bonds, even on challenging materials or in extreme conditions.

Advanced Product Designs and Process Innovations

The benefits of designing and building products with 3M Scotch-Weld Structural Adhesives help drive product success.

- **Freedom of Design:** Improve aesthetics, reduce weight and noise, enhance corrosion and fatigue resistance, and more.
- **Process Efficiencies:** Speed production with quiet, fast and easy manufacturing processes.
- **Low Odor Advantages:** Improve your environment with 3M's low odor structural adhesives.
- **Dispensing Options:** Dispense by hand or with automated equipment.

3M Global Service and Support

3M supports our customers with the testing, technology, and training needed to create better products. Our world-wide support staff has the experience you can rely on for everything from structural adhesive selection to process improvement.

Leverage 3M's proven selection of structural adhesives, deep industry expertise, and technical support to your advantage. Design with Confidence. Build to Last.

Simplifying adhesive decisions for your application

The following questions will help you narrow adhesive choices to two or three possibilities for evaluation.

Q: What materials will be bonded?

A: Structural adhesives work by adhering to the top surface of the bonded parts, so it's important to know the exact material and condition on those surfaces. For metals, will the adhesive be applied to bare metal, or will there be a paint or coating on the surface? For plastics, exactly which base resin? Could there be residual release agents on the surfaces used for mold release?

Q: What is the preferred cure speed?

A: The chosen structural adhesive must have enough work life (open time, pot life) to allow proper mixing and application of the adhesive and assembling of the bonded parts. Smaller assemblies or shorter cycle time production processes may be able to use a faster curing adhesive with a work life of only five minutes or less, while larger assemblies that require alignment and clamping will probably need a work life of 20 minutes or more.

Q: What surface preparation will be required?

A: Structural adhesives generally prefer clean, rough, dry surfaces for highest bond strength. This typically means either light abrasion and solvent cleaning of the surface, or solvent cleaning followed by chemical etching or applying a primer. Adhesion tests should be performed to determine the adequate surface preparation for a specific application.

Q: What types of joints are best for structural adhesives?

A: Joint designs that put the adhesive bond under shear, tension, or compression forces will provide the highest strength. Designs that tend to apply peel or cleavage forces to the adhesive, where the applied stresses are not distributed over the entire bond area, will have lower bond strength, but the bond may still be sufficient for the needs of the application. In addition, optimum bond line thickness typically ranges from 0.005" to 0.020". The adhesive qualification process should always include testing of prototype assemblies to ensure the adhesive will provide enough performance.

Q: How are structural adhesives used and applied?

A: Structural adhesives come in many forms, including low viscosity liquids and non-sag pastes, one- and two-component formulations, short and long work lives, and various package sizes and shapes. Most two-part structural adhesives are available in both bulk containers and convenient, easy-to-use dispense cartridge mixing systems.

Q: What are the general characteristics of the different types of structural adhesives?

A: All structural adhesives provide at least 1,000 psi of overlap shear strength to aluminum, but the different adhesive chemistries have various properties:

- **Epoxy adhesives** come in both two-part adhesives (that cure upon mixing the two components) and one-part adhesives (that cure with temperature). They generally have the highest strength and overall performance. They also provide the best resistance to high temperatures, solvents and outdoor weathering. They adhere well to metals, woods and concrete, and the flexible epoxy adhesives also bond to some plastics and rubbers. Epoxy adhesives usually require clean, abraded surfaces to obtain maximum bond strength.
- **Acrylic adhesives** are two-part adhesives that provide excellent bond strength and durability, although slightly lower than epoxy adhesives. However, they have several features that make them easier to use in many applications and manufacturing processes. These benefits include a much faster cure speed, higher tolerance for oily or unprepared bonding surfaces and the ability to bond a wide variety of materials, including nearly all plastics. Newer acrylic adhesive formulations are room temperature stable with a long shelf life, and some have much lower odor than regular acrylic adhesives.

- **Urethane adhesives** are two-part adhesives that are relatively flexible when cured, and therefore tend to have excellent impact resistance and good adhesion to most plastics. They also bond well to woods, concrete and rubbers, but they tend to have reduced resistance to solvents and high temperatures. Uncured adhesive components are sensitive to moisture.

- **Cyanoacrylate adhesives** (instant adhesives) are one-component, lower viscosity liquids that cure extremely quickly with just contact pressure and surface moisture. They adhere well, with thin bond lines, to plastics, metals and rubbers. With the use of primers, they can also adhere to low surface energy plastics and elastomers. They tend to have low flexibility, peel strength and impact resistance compared to other structural adhesives. They are generally used for applications such as gasket bonding and smaller assemblies.

- **Anaerobic adhesives** are one-part adhesives that cure on active metal surfaces when oxygen gets excluded from the bond line. These products keep your factory running efficiently, reducing maintenance and leakage. They do not bond well to glass, plastics or rubbers, and are primarily used for applications such as locking threads and sealing pipe connections.

Tensile

Tensile is pull exerted equally over the entire joint. Pull direction is straight and away from the adhesive bond.

Shear

Shear is pull directed across the adhesive, forcing the substrates to slide over each other.

Cleavage

Cleavage is pull concentrated at one edge of the joint, exerting a prying force on the bond. The other edge of the joint is theoretically under zero stress.

Peel

Peel is concentrated along a thin line at the edge of the bond where one substrate is flexible.

Key Markets & Applications for 3M™ Scotch-Weld™ Structural Adhesives

Sporting Goods

Key Benefits:

- Excellent impact resistance
- High strength for small joints
- Bonds rubber, composites and metals

Lead Products:

DP420NS Black, DP8810NS, PR100

Specialty Vehicle

Key Benefits:

- Reduces weight
- High strength
- Vibration & fatigue resistant

Lead Products:

STRUCTURAL ADHESIVE FAMILIES

Rigid Epoxy Adhesives have higher tensile strength at given elongations for greater long-term holding power. Mostly used for rigid substrates (metals) with high static loads.

Flexible Epoxy Adhesives have lower tensile strength at given elongations for greater capability to withstand differential movement of bonded parts; higher peel strength; and higher adhesion to most plastics.

Toughened Epoxy Adhesives have higher tensile strength at given elongations for greater fatigue resistance, best suited for dynamic stresses. Because of the toughness it imparts greater long-term holding power; higher peel strength; lower adhesion to most plastics; and significantly higher resistance against shock, vibration, and impact loads.

One-part Heat-cured Epoxy Adhesives are rigid adhesives that have outstanding strength when measured at elevated temperatures; these adhesives require a thermal cure, typically around 250-350°F (120-180°C) for 40-60 minutes, to achieve full strength.

MMA Acrylic Adhesives are based on methyl methacrylate (MMA) monomer, which provides greater adhesion to a wide variety of materials including most plastics and paint systems, and are tolerant of many surface contaminations. High impact resistance for metal bonds.

Low Odor Acrylic Adhesives are designed to improve the odor of typical MMA adhesives, featuring a much faster rate of strength build than most 2K structural adhesives. They provide excellent adhesion to a wide variety of materials, including many plastics and paint systems. They also provide high impact resistance for plastic bonds and are tolerant of many surface contaminations.

LSE Acrylic Adhesives are based on special monomers that provide outstanding adhesion to most TPOs (Thermoplastic Olefins) and "low surface energy" plastics, such as polypropylene and polyethylene, without surface treatment.

Semi-rigid Urethane Adhesives have higher tensile modulus, and lower elongation capability, with greater long-term holding power.

Flexible Urethane Adhesives have lower tensile modulus and higher elongation capability. Excellent adhesion to most plastics.

INSTANT ADHESIVE FAMILIES

Plastic & Rubber (PR) Instant Adhesives bond to the widest variety of materials, have an extremely fast cure speed, and come in a wide range of viscosity.

Surface Insensitive (SI) Instant Adhesives cure even on acidic surfaces (such as wood, paper, leather, and ceramic); these adhesives have a slower cure speed than traditional instant adhesives.

Super Fast (SF) Instant Adhesives provide the fastest rate of cure speed for most applications.

Low Odor (LO) Instant Adhesives provide a reduced blooming effect for applications that require an improved appearance.

Engineered Grade (EG) Instant Adhesives provide excellent overall performance for most applications.

Rubber Toughened (RT) Instant Adhesives can be used for applications that require improved impact strength or vibration resistance; preferred for applications bonding two rigid materials together.

Metal (MC) Instant Adhesives provide improved performance on metal substrates.

General Purpose (EC) Instant Adhesives are slightly less expensive products that have lower strength and impact resistance compared to traditional instant adhesives.

ANAEROBIC ADHESIVE FAMILIES

Threadlockers (TL) hold screws and other threaded fasteners in place to prevent loosening from shock, vibration, and thermal expansion and contraction; these adhesives replace lock washers and nylon-insert nuts.

Retaining Compounds (RT) bond and seal non-threaded cylindrical metal assemblies, such as press-fit or slip-fit parts; these adhesives replace keys, splines, and set screws.

Pipe Sealants (PS) provide a pressure seal on threaded tubes and pipes; these adhesives replace various tapes and pastes.

Gasket Makers (GM) fill voids between metal parts to create a form-in-place gasket; these adhesives replace o-rings and pre-formed gaskets.

3M™ Scotch-Weld™ Low Surface Energy (LSE) Plastic Bonding Adhesives

3M's Low Surface Energy Structural Acrylic Adhesives bond to low surface energy plastics such as Polypropylene (PP), Polyethylene (HDPE) and most Thermoplastic Polyolefins (TPOs), providing structural adhesive bond strength that causes the plastic material to fail before the adhesive bond.

DP8010 Blue

3M™ Scotch-Weld™ Concrete Repair Adhesives

3M's Concrete Repair Urethane Adhesives repair cracks and patch holes in minutes, providing minimal disruption to your operations. Products are available for both horizontal and vertical surfaces. **DP600**

3M™ Scotch-Weld™ Plastic and Rubber Instant Adhesives

The PR (Plastic & Rubber) series of products bonds to most plastics and rubbers with a range of viscosities that will fit all your application needs.
PR40, PR100, PR600, PR1500, PRGel

3M™ Scotch-Weld™ Super Fast Instant Adhesives

The SF (Super Fast) series products are very fast setting and bond to most surfaces, including leathers and other acidic materials, making them the first choice for fast cure and material versatility.
SF20 & SF100

3M™ Scotch-Weld™ Engineered Grade Instant Adhesives

3M's Engineered Grade Instant Adhesives combine high performance, excellent adhesion and temperature resistance with the speed of instant adhesives – providing you with differentiated capabilities for your most difficult thin bond line applications. **CA5, CA40, CA40H, CA50 Gel**

3M™ Scotch-Weld™ Threadlockers

3M's Threadlocker Adhesives offer a range of products including temporary, permanent and high temperature resistance. These adhesives conform to most industry recognized standards for torque and strength. **TL42, TL62, TL71, TL90**

For low volume applications and take-it-to-the-job convenience, the 3M™ EPX Plus II and EPX metal manual applicators comfortably dispense any of the 3M™ Scotch-Weld™ Duo-Pak Structural Adhesives. For higher volume applications, select the 200ml manual dispenser, or the 200ml or 400ml pneumatic dispenser. For concrete repair, there are both manual or pneumatic options.

Surface Preparation Tips

The following surface preparation steps are generally recommended for most substrates and structural adhesives. See Technical Data Sheets for more specific recommendations.

METALS	PLASTICS AND RUBBERS	GLASS
<ol style="list-style-type: none"> 1. Wipe surface with acetone or methyl ethyl ketone (MEK) using a clean cloth. A heavier degreaser may be needed if the substrate contains a layer of processing oil. 2. Lightly abrade surface with sandblasting, fine grit sandpaper or 3M™ Scotch-Brite™ 7447 maroon pads. 3. Wipe surface with acetone or MEK to remove debris. 4. Allow solvent to evaporate before applying adhesive. 	<ol style="list-style-type: none"> 1.
