Target applications for the TLE496x Hall switch family are all applications which require a high precision Hall switch with an operating temperature range from -40°C to 170°C. Its superior supply voltage range from 3.0 V to 32 V with overvoltage capability (e.g. load-dump) up to 42 V without external resistor makes it ideally suited for automotive and industrial applications.

The TLE4964-2K is a unipolar switch with a typical operating point B_{OP} = 28 mT and a hysteresis of B_{HYS} = 5.5 mT. It is ideally suited for various position detection applications.

2.4 Block Diagram

2.5 Functional Block Description

The chopped Hall IC switch comprises a Hall probe, bias generator, compensation circuits, oscillator and output transistor.

The bias generator provides currents for the Hall probe and the active circuits. Compensation circuits stabilize the temperature behavior and reduce influence of technology variations.

The active error compensation (chopping technique) rejects offsets in the signal path and the influence of mechanical stress to the Hall probe caused by molding and soldering processes and other thermal stress in the package. The chopped measurement principle together with the threshold generator and the comparator ensures highly accurate and temperature stable magnetic thresholds.

The output transistor has an integrated overcurrent and overtemperature protection.

Figure 2-3 Timing Diagram TLE4964-2K

Figure 2-4 Output Signal TLE4964-2K

2.6 Start-up behavior

The magnetic threshold exhibit a hysteresis $B_{HYS} = B_{OP} - B_{RP}$. In case of a power-on with a magnetic field B within hysteresis ($B_{RP} < B < B_{OP}$) the output of the sensor is set to "HIGH" per default. After the first crossing of B_{OP} or B_{RP} of the magnetic field the output is set to the correct value.

3 Specification

3.1 Application Circuit

The following **Figure 3-1** shows one option of an application circuit. As explained above the resistor R_S can be left out (see **Figure 3-2**). The resistor R_Q has to be in a dimension to match the applied V_S to keep I_Q limited to the operating range of maximum 25 mA.

e.g.:

$$V_S = 12 \text{ V}$$

$$I_Q = 12 \text{ V} / 1200 \text{ } \Omega = 10 \text{ mA}$$

1) This lifetime statement is an anticipation based on an extrapolation of Infineon's qualification test results. The actual lifetime of a component depends on its form of application and type of use etc. and may deviate from such statement. The lifetime statement shall in no event extend the agreed warranty period.

Attention: Stresses above the max. values listed here may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Maximum ratings are absolute ratings; exceeding only one of these values may cause irreversible damage to the integrated circuit.

Calculation of the dissipated power P_{DIS} and junction temperature T_J of the chip (SC59 example):

e.g for: $V_{DD} = 12\text{ V}$, $I_S = 2.5\text{ mA}$, $V_{QSAT} = 0.5\text{ V}$, $I_Q = 20\text{ mA}$

Power dissipation: $P_{DIS} = 12\text{ V} \times 2.5\text{ mA} + 0.5\text{ V} \times 20\text{ mA} = 30\text{ mW} + 10\text{ mW} = 40\text{ mW}$

Temperature $\Delta T = R_{thJA} \times P_{DIS} = 300\text{ K/W} \times 40\text{ mW} = 12\text{ K}$

For $T_A = 150\text{ °C}$: $T_J = T_A + \Delta T = 150\text{ °C} + 12\text{ K} = 162\text{ °C}$

3.3 Operating Range

The following operating conditions must not be exceeded in order to ensure correct operation of the TLE4964-2K. All parameters specified in the following sections refer to these operating conditions unless otherwise mentioned.

Table 3-3 Operating Conditions Parameters

Parameter	Symbol	Values			Unit	Note / Test Condition
		Min.	Typ.	Max.		
Supply voltage	V_{DD}	3.0		32 ¹⁾	V	
Output voltage	V_Q	-0.3		32	V	
Junction temperature	T_j	-40		170	°C

Product characteristics involve the spread of values guaranteed within the specified voltage and ambient temperature range. Typical characteristics are the median of the production and correspond to $V_{DD} = 12\text{ V}$ and $T_A = 25^\circ\text{C}$. The below listed specification is valid in combination with the application circuit shown in [Figure 3-1](#) and [Figure 3-2](#)
