Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Attention please!

The information given in this document shall in no event be regarded as a guarantee of conditions or characteristics (“Beschaffenheitsgarantie”). With respect to any examples or hints given herein, any typical values stated herein and/or any information regarding the application of the device, Infineon Technologies hereby disclaims any and all warranties and liabilities of any kind, including without limitation warranties of non-infringement of intellectual property rights of any third party.

Information

For further information on technology, delivery terms and conditions and prices please contact your nearest Infineon Technologies Office (**www.infineon.com**).

Warnings

Due to technical requirements components may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies Office.

Infineon Technologies Components may only be used in life-support devices or systems with the express written approval of Infineon Technologies, if a failure of such components can reasonably be expected to cause the failure of that life-support device or system, or to affect the safety or effectiveness of that device or system. Life support devices or systems are intended to be implanted in the human body, or to support and/or maintain and sustain and/or protect human life. If they fail, it is reasonable to assume that the health of the user or other persons may be endangered.

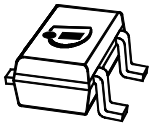
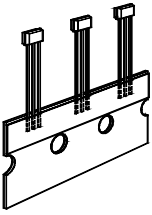
1 Overview



SC59



PG-SSO-3-2

1.1 Features

- 3.0 V to 26 V supply voltage operation
- High sensitivity and high stability of the magnetic switching points
- High resistance to mechanical stress by Active Error Compensation
- Reverse battery protection (– 18 V)
- Superior temperature stability
- Peak temperatures up to 195°C without damage
- Low jitter (typ. 1 µs)
- High ESD performance (± 8 kV HBM)
- Digital output signal with current modulation 6 / 14 mA
- Unipolar version
- SMD package SC59 (SOT23 compatible) - (TLE4976-1H))
- Leaded package PG-SSO-3-2 - (TLE4976L)

1.2 Functional Description

The TLE4976-1H and the TLE4976L are integrated circuit Hall-effect sensors designed specifically for highly accurate applications.

Precise magnetic switching points and high temperature stability are achieved by active compensation circuits and chopper techniques on chip.

Type	Package
TLE4976-1H	SC59
TLE4976L	PG-SSO-3-2

1.3 Pin Configuration (top view)

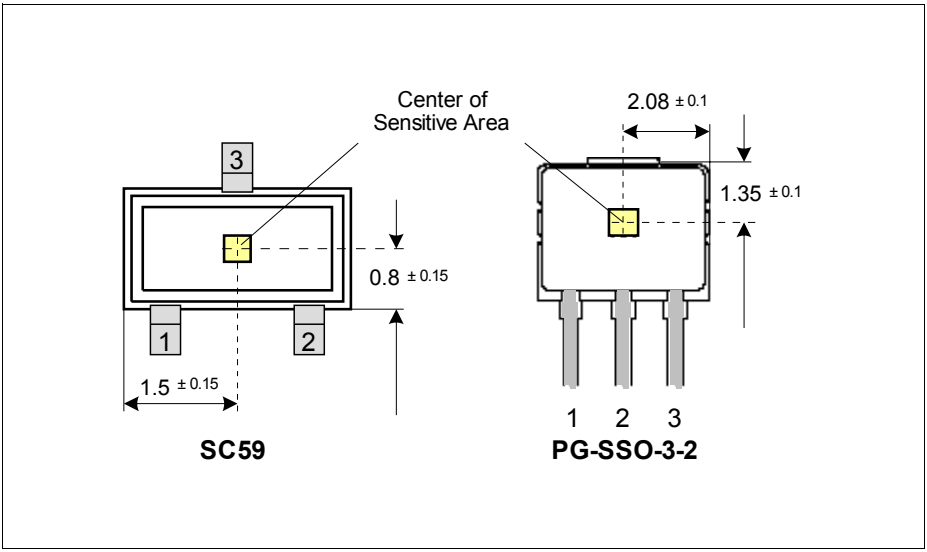


Figure 1 Pin Definition and Center of Sensitive Area

2.1 Block Diagram

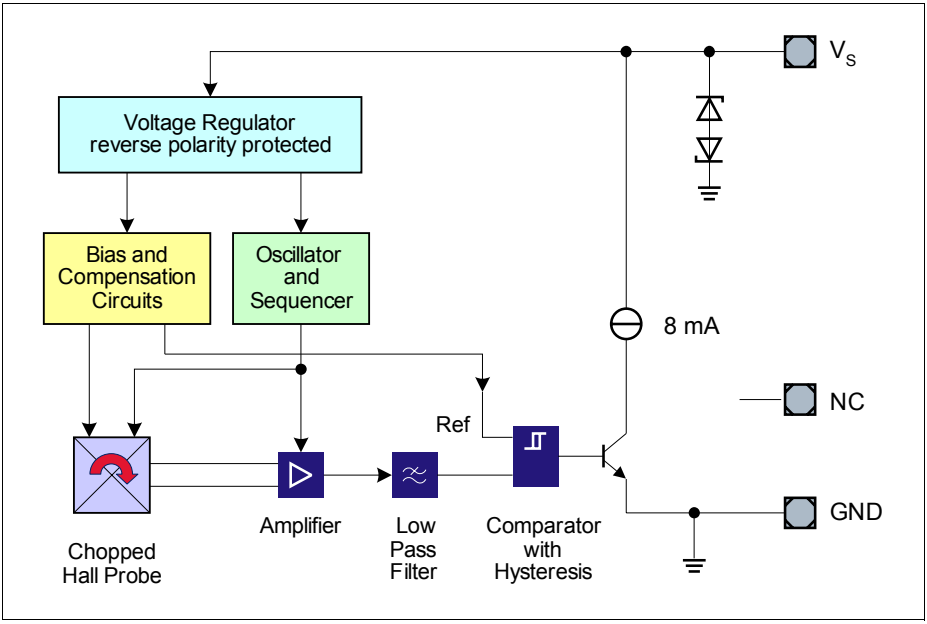

Figure 2 Block Diagram

2.2 Circuit Description

The chopped Hall IC Switch comprises a Hall probe, bias generator, compensation circuits, oscillator, and output transistor.

The bias generator provides currents for the Hall probe and the active circuits. Compensation circuits stabilize the temperature behavior and reduce technology variations.

The Active Error Compensation rejects offsets in signal stages and the influence of mechanical stress to the Hall probe caused by molding and soldering processes and other thermal stresses in the package.

This chopper technique together with the threshold generator and the comparator ensure high accurate magnetic switching points.

The current consumption depends on the switching status.

3 Maximum Ratings

Table 3 Absolute Maximum Ratings
T_j = – 40°C to 150°C

Parameter	Symbol	Limit Values		Unit	Conditions
		min.	max.		
Supply voltage	V_S	– 18 – 18 – 18	18 24 26	V	 for 1 h, R_s+R_L ≥ 75 Ω for 5 min, R_s+R_L ≥ 75 Ω
Supply current through protection device	I_S	– 50	+ 50	mA	
Junction temperature	T_j	– – – –	155 165 175 195	°C	for 2000 h (not additive) for 1000 h (not additive) for 168 h (not additive) for 3 x 1 h (additive)
Storage temperature	T_S	– 40	150	°C	
Magnetic flux density	B	–	unlimited	mT	

Note: Stresses above those listed here may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Table 4 ESD Protection [1)]

Parameter	Symbol	Limit Values		Unit	Notes
		min.	max.		
ESD voltage	V_{ESD}	–	± 8	kV	HBM, R = 1.5 kΩ, C = 100 pF T_A = 25°C

1) Human Body Model (HBM) tests according to: EOS/ESD Association Standard S5.1-1993 and Mil. Std. 883D method 3015.7

4 Operating Range

Table 5 Operating Range

Parameter	Symbol	Limit Values			Unit	Conditions
		min.	typ.	max.		
Supply voltage	V_S	3	–	18	V	
		3		24		for 5 min, $R_s+R_L > 100\ \Omega$
Junction temperature	T_j	- 40 –	– –	150 175	°C	 for 168 h

5 Electrical and Magnetic Parameters

Table 6 Electrical Characteristics [1].

Parameter	Symbol	Limit Values			Unit	Conditions
		min.	typ.	max.		
Supply current low	I_{SLOW}	5	6	7	mA	B > B_{RP} V_S = 3 V ... 18 V
Supply current high	I_{SHiGH}	12	14	17	mA	B < B_{OP} V_S = 3 V ... 18 V
Reverse current	I_{SR}	0	–	0.2	mA	V_S = - 18 V
Output fall time	t_f	–	0.4	1.6	µs	R_S = 100 Ω, see: **Figure 3 "Timing Definition" on Page 12**
Output rise time	t_r	–	0.4	1.6	µs	
Chopper frequency	f_{OSC}	–	320	–	kHz	
Switching freq.	f_{SW}	0	–	15 [2]	kHz	
Delay time [3]	t_d	–	13	–	µs	
Output jitter [4]	t_{QJ}	–	1	–	$µs_{RMS}$	Typical value for square wave signal 1 kHz
Power-on time [5]	t_{PON}	–	13	–	µs	$V_S \geq$ 3.0 V
Thermal resistance [6]	R_{thJA}	–	100	–	K/W	SC59
		–	–	190		PG-SSO-3-2

1) over operating range, unless otherwise specified. Typical values correspond to VS =12 V and TA = 25°C

2) To operate the sensor at the max. switching frequency, the value of the magnetic signal amplitude must be 1.4 times higher than for static fields.
This is due to the - 3 dB corner frequency of the low pass filter in the signal path.

3) Systematic delay between magnetic threshold reached and output switching

4) Jitter is the unpredictable deviation of the output switching delay

5) Time from applying $V_S \geq$ 2.7 V to the sensor until the output state is valid

6) Thermal resistance from junction to ambient

Calculation of the ambient temperature (SC59 example)

e.g. for V_S = 12.0 V, R_S = 100 Ω, $I_{SHIGHtyp}$ = 14 mA :

Power Dissipation: P_{DIS} = 148.4 mW.

In $T_A = T_j - (R_{thJA} \times PDIS) = 175°C - (100\ K/W \times 0.15\ W)$

Resulting max. ambient temperature: T_A = 160°C

Table 7 Magnetic Characteristics TLE4976-1H and TLE4976L[1)]

Parameter	Symbol	T_j [°C]	Limit Values			Unit	Notes
			min.	typ.	max.		
Operate point	B_{OP}	- 40...150	5.5	9.25	11.0	mT	TLE4976-1H
		- 40 25 150	1.1 1.0 0.9	4.1 4.0 3.8	6.1 6.0 5.8		TLE4976L
Release point	B_{RP}	- 40...150	5.0	7.25	10.5	mT	TLE4976-1H
		- 40 25 150	3.1 3.0 2.9	6.1 6.0 5.8	8.2 8.0 7.7		TLE4976L
Hysteresis	B_{HYS}	- 40...150	0.5	2	3	mT	TLE4976-1H
		- 40 25 150	– 0.5 –	– 2.0 –	– 3.5 –		TLE4976L
Temperature compensation of magnetic thresholds	TC	–	–	0	–	ppm/°C	TLE4976-1H
				- 200			TLE4976L
Repeatability of magnetic thresholds [2)]	B_{REP}		–	40	–	μT_{RMS}	Typ. value for $\Delta B / \Delta t$ > 12 mT/ms

1) over operating range, unless otherwise specified. Typical values correspond to VS = 12 V.

2) B_{REP} is equivalent to the noise constant

Note: Typical characteristics specify mean values expected over the production spread.

Field Direction Definion

Positive magnetic fields related with south pole of magnet to the branded side of package.

6 Timing Diagram

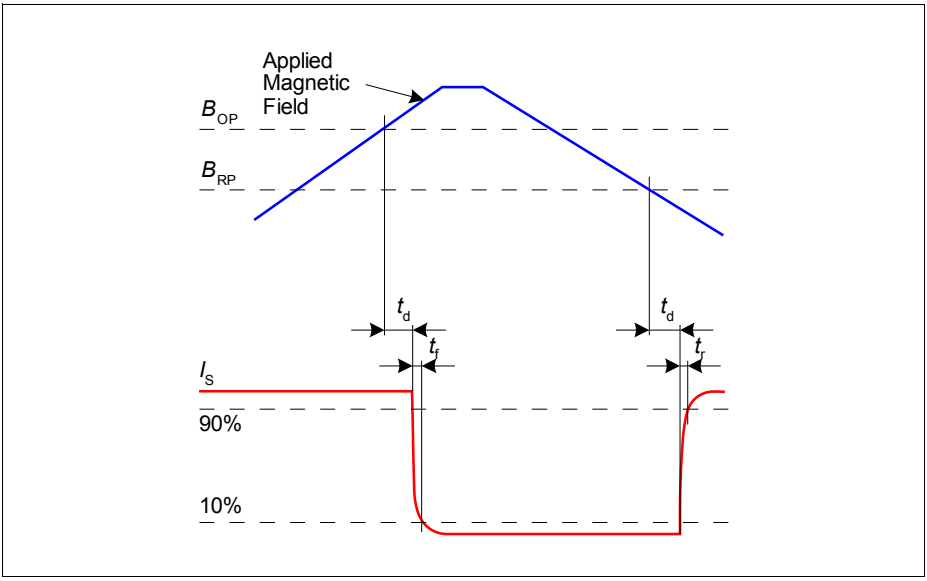

Figure 3 Timing Definition

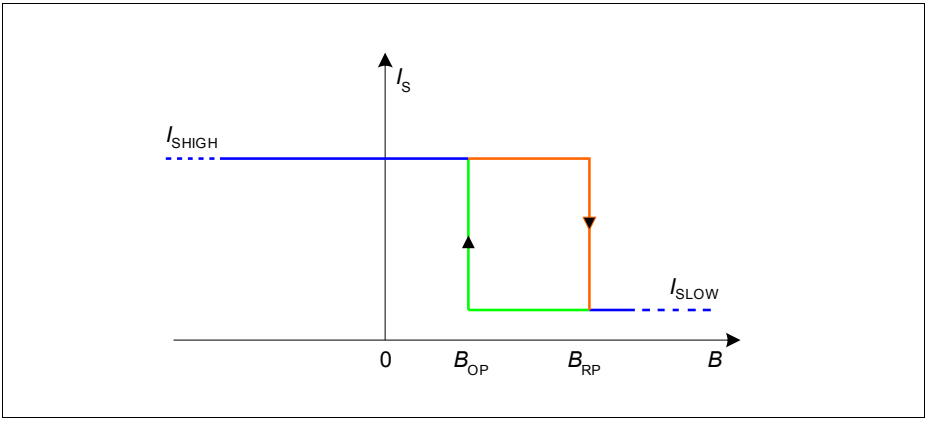

Figure 4 Output Signal

7 Application Circuit

The advantage of the current interface is, that only two wires are necessary to connect the sensor.

At least one series resistor is required to convert the two output states of the Hall sensor from current consumption to a voltage information.

A typical value for R_L is 100 Ω. This gives a typical signal voltage level V_{SIG} of 0.8 V in the Off state and 1.4 V in the On state.

If the sensor is operated in an application environment with disturbances on the supply line, an additional series resistor R_S is recommended. The maximum value for the series resistor R_S can be calculated using the following formula:

$$R_{Smax} = \frac{V_{Supplymin} - V_{Smin}}{I_{Shighmax}} - R_L$$

V_{S_min} is the minimal supply voltage which might occur due to disturbances on the supply line V_S.

Example: $V_{Supplymin}$ = 6 V; V_{Smin} = 3 V; R_L = 100 Ω; $I_{Shighmax}$ = 17 mA : R_{Smax} **= 76.5** Ω
