

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

SPECIFICATION: THIS ISSUE: DATE: RW 2525 ISSUE 2 February 2014

SPECIFICATION RW-2525

Document Number 108-121025

TMS - CCUV SLEEVING

1. SCOPE

This Quality Assurance Specification establishes the quality standard for a flexible, flame retarded sleeving specifically designed as UV protection for cable identification markers. The sleeving is suitable for use in wire harness systems requiring high fluid resistance to the effects of nuclear, biological and chemical agent exposure and decontamination as defined in RT-700.

2. REVISION HISTORY

Revision Number	Description of change	Date	Incorporated By
1	Replaces RW 2027 rev 3	March 2000	-
2	Format & update	February 2014	M Priddle

Consult TE Connectivity for the latest dimensions and design specifications.

3. APPLICABLE DOCUMENTS

ASTM D2671: 1 Standard Methods of Testing Heat-Shrinkable Sleeving for Electrical

Use.

ASTM G21 Standard Recommended Practice for determining resistance of

Synthetic Polymeric Materials to Fungi.

AMS-DTL-23053 General Specification for Insulating Sleeving, Electrical, Heat

Shrinkable.

Mil-H-5606 Hydraulic Fluids, Petroleum Base, Aircraft, Missile and Ordnance.

Mil-T-5624 Turbine Fuel, Aviation, Grades JP-4 and JP-5.

Mil-L-7808 Lubricating Oil Aircraft Turbine Engine, Synthetic Base.

Mil-A-8243 Anti-icing and Deicing- Defrosting Fluid.

Mil-L-23699 Lubricating Oil, Aircraft Turbine Engines, Synthetic Base.

O-S-1926 Sodium Chloride, Technical.

RT-700 (TE) Harness System Chemical Agent Exposure & Decontamination.

Subsequent amendments to or revisions of any of the above publications apply to this standard only when incorporated in it by updating or revision.

3.. REQUIREMENTS

3.1 The sleeving shall be homogeneous and essentially free from pinholes, flaws, bubbles, cracks, seams, defects and inclusions. Color shall be clear.

3.2 Dimensions

Size	Inside Diameter	Length	Inside Diameter	Wall Thickness
	As Supplied (min)	As Supplied (min)	After Recovery (max)	After recovery (nom)
	mm	mm	mm	mm
1	3.2	65	1.6	0.25
2	4.8	65	2.4	0.25
3	6.4	65	3.2	0.30
4	9.5	65	4.8	0.30
5	12.7	65	6.4	0.30
6	19.0	65	9.5	0.43
7	25.4	65	12.7	0.48
8	38.0	65	19.0	0.51
9	6.4	32	3.2	0.30
10	12.7	32	6.4	0.30
11	25.4	32	12.7	0.48
12	9.5	32	4.8	0.30
13	19.0	32	9.5	0.43
14	38.0	32	19.0	0.51

3.2 Dimensions (continued)

Size	Inside Diameter	Length	Inside Diameter	Wall Thickness
	As Supplied (min)	As Supplied (min)	After Recovery (max)	After recovery (nom)
	MM	MM	MM	MM
15	3.2	76	1.6	0.25
16	4.8	76	2.4	0.25
17	6.4	76	3.2	0.30
18	9.5	76	4.8	0.30
19	12.7	76	6.4	0.30
20	19.0	76	9.5	0.43
21	25.4	76	12.7	0.48
22	38.0	76	19.0	0.51

3.3 Test Requirements

The sleeving shall meet all the requirements contained in Table 1.

4. TEST METHODS

4.1 Preparation of Test Specimen

Unless otherwise specified, tests shall be carried out on specimens of sleeving recovered by conditioning in an oven at 200°C for 3 minutes and allowed to cool to ambient temperature. Condition the test specimens for 3 hours at 23 ± 3 °C and 50 ± 5 percent humidity prior to all testing.

4.2 Dimensions and Longitudinal Change

The test method shall be as specified in ASTM D2671. The length and inside diameter of three 150 mm long specimens of expanded sleeving shall be measured. The specimens shall be recovered and the length and inside diameter of each shall be measured. The longitudinal change shall be expressed as a percentage of the original length. The minimum and maximum recovered wall thickness shall be determined.

4.3 Tensile Strength and Ultimate Elongation

The test method shall be as specified in ASTM D2671. 25.4 mm bench marks and an initial jaw separation of 25.4 mm shall be used. Rate of jaw separation shall be 50 \pm 5 mm per minute. The test shall be carried out at a temperature of 23 \pm 2 °C.

4.4 Specific Gravity

The test method shall be as specified in ASTM D2671.

4.5 Heat Shock

The test method shall be as specified in ASTM D2671. The specimens shall be conditioned as specified in Table 1

TEST METHODS (continued)

4.6 Heat Ageing

The test method shall be as specified in ASTM D2671. Five tensile test specimens shall be prepared as in Clause 4.1. The specimens shall be conditioned in an oven as specified in Table 1 and tested for ultimate elongation according to Clause 4.3.

4.7 Low Temperature Flexibility

For tubing of expanded diameter less than 6mm cut three tubular specimens 300 mm long from the tubing. For tubing of expanded diameter greater than 6mm cut three strip specimens 6mm wide and 300 mm long from the expanded tubing. The specimens shall be recovered on to mandrels according to Clause 4.1 and conditioned as specified in Table 1. The mandrel diameter shall be 10 times the specimen thickness \pm 10 percent. For tubular specimens, the specimen thickness shall be equivalent to the outside diameter. Without removing the specimens from the cold chamber wrap the specimens 360° around the mandrel in approximately 2 seconds. Disregard any side cracking, cause by flattening of the specimens on the mandrel.

4.8 Clarity Stability

The test methods shall be as specified in MIL-I-23053. The specimens shall be conditioned in an oven as specified in Table 1 and visually examined for legibility of print through the tubing wall.

4.9 Flammability

The test method shall be a specified in ASTM D2671 Procedure C.

4.10 Electric Strength

The test method shall be as specified in ASTM D2671. The specimens shall be recovered on the metal mandrels for 10 minutes at + 175 \pm 2°C or until the tubing has completely shrunk on the mandrels.

4.11 Copper Contact Corrosion

The test method shall be as specified in ASTM D2671 Procedure B. The specimens shall be conditioned as specified in Table 1 and the copper mandrel visually examined.

4.12 Copper Mirror Corrosion

The test method shall be as specified in ASTM D2671 Procedure A. The specimens shall be conditioned as specified in Table 1 and the mirrors shall be visually examined.

4.13 Fungus Resistance

The test method shall be as specified in ASTM G21 and a rating made.

TEST METHODS (continued)

4.14 Water Absorption

The test method shall be as specified in ASTM D2671.

4.15 Fluids Resistance

The test method shall be as specified in ASTM D2671. The test specimens shall be prepared as in Clause 4.1 and immersed in one of the fluids specified in Table 1. They are removed lightly wiped and air dried at $23 \pm 2^{\circ}$ C. The tensile strength and ultimate elongation shall be tested according to Clause 4.3. The test shall be repeated on the remaining specified fluids.

5. Sampling

Testing frequency shall be Production Routine and Qualification.

Production Routine Tests shall be carried out on every batch of sleeving and shall consist of Dimensions and Longitudinal Change.

Qualification tests shall be carried out to the requirements of the Design Authority.

6 Packaging

Packaging shall be in accordance with good commercial practice. Each package shall bear an identification label showing material quantity description, size, color and batch number. Additional information shall be supplied as specified in the contract or order.
