

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Features

- Operating range from $V_{CC} = 1.8$ to 6 V
- Rail-to-rail input and output
- Extended V_{icm} ($V_{CC-} - 0.2$ V to $V_{CC+} + 0.2$ V)
- Low supply current (400 μ A)
- Gain bandwidth product (1.6 MHz)
- High unity gain stability
- ESD tolerance (2 kV)
- Latch-up immunity
- Available in
 - SOT23-5 micropackage
 - MiniSO-8, SO-8, SO-14
 - TSSOP8, TSSOP14 package

Applications

- Battery powered applications (toys)
- Portable communication devices (cell phones)
- Audio drivers (headphone drivers)
- Laptop/notebook computers

Description

The TS187x (single, dual and quad) device can operate with voltages as low as 1.8 V. They feature both input and output rail-to-rail.

The common mode input voltage extends 200 mV beyond the supply voltages at 25 °C, while the output voltage swing is within 100 mV of each rail with a 600 Ω load resistor. The devices consume typically 400 μ A per channel while offering 1.6 MHz of gain bandwidth product. The amplifiers provide a high output drive capability at typically 65 mA loads.

These features make the TS187x family ideal for sensor interface, battery supplied and portable applications.

- All voltage values, except differential voltage, are with respect to network terminal.
- Differential voltages are the non-inverting input terminal with respect to the inverting input terminal. If $V_{id} > \pm 1$ V, the maximum input current must not exceed ± 1 mA. When $V_{id} > \pm 1$ V, add an input series resistor to limit the input current.
- Short-circuits can cause excessive heating. Destructive dissipation can result from simultaneous short-circuits on all amplifiers.
- Human body model: a 100 pF capacitor is charged to the specified voltage, then discharged through a 1.5 k Ω resistor between two pins of the device. This is done for all couples of connected pin combinations while the other pins are floating.
- Machine model: a 200 pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω). This is done for all couples of connected pin combinations while the other pins are floating.
- Charged device model: all pins and package are charged together to the specified voltage and then discharged directly to ground through only one pin. This is done for all pins.
- Short-circuits from the output to V_{CC} can cause excessive heating. The maximum output current is approximately 80 mA, independent of the magnitude of V_{CC} . Destructive dissipation can result from simultaneous short-circuits on all amplifiers.

5 Revision history

Table 14. Document revision history

Date	Revision	Changes
01-Apr-2002	1	First release.
02-Jan-2005	2	Modifications on AMR Table 2 on page 3 (explanation of V_{id} and V_i limits).
21-May-2007	3	Added limits over temperature range in Table 4 on page 5 , Table 5 on page 6 , Table 6 on page 7 . Added SVR in Table 6 (SVR parameter removed from Table 4 and Table 5). Added equivalent input voltage noise in Table 4 , Table 5 , and Table 6 . Added R_{thjc} values in Table 2 . Added automotive grade part numbers to order codes table. Moved order codes table to Section 4 on page 23 . Updated format of package information.
17-Jan-2008	4	Updated footnote for automotive grade order codes in Table 13 .
12-Mar-2010	5	Updated document format. Modified headings, added root part number TS187xA and added Table 1: Device summary on cover page. Corrected typical values for A_{Vd} , I_{source} , I_{sink} and V_{ol} in Table 4 , Table 5 and Table 6 . Added Figure 48: Common mode rejection ratio vs. frequency at $V_{CC} = 5 V$. Updated package information in Chapter 3 . Removed order codes for SO-8 automotive grade packages (TS1871IYDT and TS1871AIYDT) from Table 13 . Removed order codes for DIP package from Table 13 .
06-Jul-2012	6	Updated Table 13: Order codes .
19-Nov-2012	7	Updated Features (added MiniSO-8, SO-8, SO-14, TSSOP8, and TSSOP14 package). Updated titles of Table 5 and Table 6 (replaced V_{DD} by V_{CC}). Updated TS1871IYLT, TS1871AIYLT, TS1872IYDT, TS1872AIYDT, TS1874IYDT, TS1874AIYDT, TS1874IYPT, TS1872IYPT, TS1872AIYPT, and TS1874AIYPT order code in Table 13 (status qualified). Updated packaging for TS1874IYDT and TS1874AIYDT order code (indicated only tape and reel) in Table 13 . Added note 1. below Table 13 . Minor corrections throughout document.
