

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Address: A1208, Overseas Decoration Building, #122 Zhenhua RD., Futian, Shenzhen, China

Features

- Low input offset voltage: 1.5 mV max (A grade)
- Rail-to-rail input and output
- Wide bandwidth 20 MHz
- Stable for gain ≥ 4 or ≤ -3
- Low power consumption: 820 μ A typ
- High output current: 35 mA
- Operating from 2.5 V to 5.5 V
- Low input bias current, 1 pA typ
- ESD internal protection ≥ 5 kV

Related products

- See TSV911, TSV912, and TSV914 for unity-gain stable amplifiers

Applications

- Battery-powered applications
- Portable devices
- Signal conditioning and active filtering
- Medical instrumentation
- Automotive applications

Description

The TSV99x and TSV99xA family of single, dual, and quad operational amplifiers offers low voltage operation and rail-to-rail input and output. These devices feature an excellent speed/power consumption ratio, offering a 20 MHz gain-bandwidth, stable for gains above 4 (100 pF capacitive load), while consuming only 1.1 mA maximum at 5 V. They also feature an ultra-low input bias current. These characteristics make the TSV99x family ideal for sensor interfaces, battery-supplied and portable applications, as well as active filtering. These characteristics make the TSV99x, TSV99xA family ideal for sensor interfaces, battery-supplied and portable applications, as well as active filtering.

	Latch-up immunity	200	mA	

Notes:

⁽¹⁾Value is with respect to the V_{CC-} pin

⁽²⁾Differential voltages are the non-inverting input terminal with respect to the inverting input terminal

⁽³⁾ $V_{CC} - V_{IN}$ must not exceed 6 V

⁽⁴⁾Input current must be limited by a resistor in series with the inputs

⁽⁵⁾Short-circuits can cause excessive heating and destructive dissipation

⁽⁶⁾ R_{th} are typical values

⁽⁷⁾Human body model: 100 pF discharged through a 1.5 kΩ resistor between two pins of the device, done for all couples of pin combinations with other pins floating.

⁽⁸⁾ Machine model: 200 pF charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω), done for all couples of pin combinations with other pins floating

⁽⁹⁾ Charged device model: all pins plus packages are charged together to the specified voltage and then discharged directly to the ground.

Table 2: Operating conditions

Symbol	Parameter	Value	Unit
V _{CC}	Supply voltage	2.5 to 5.5	V
V _{icm}	Common mode input voltage range	(V _{CC-}) - 0.1 to (V _{CC+}) + 0.1	
T _{op}	Operating free air temperature range	-40 to 125	°C

2 Electrical characteristics

In the electrical characteristic tables below, all parameter limits at temperatures other than 25 °C are guaranteed by correlation.

3 Electrical characteristic curves

4 Application information

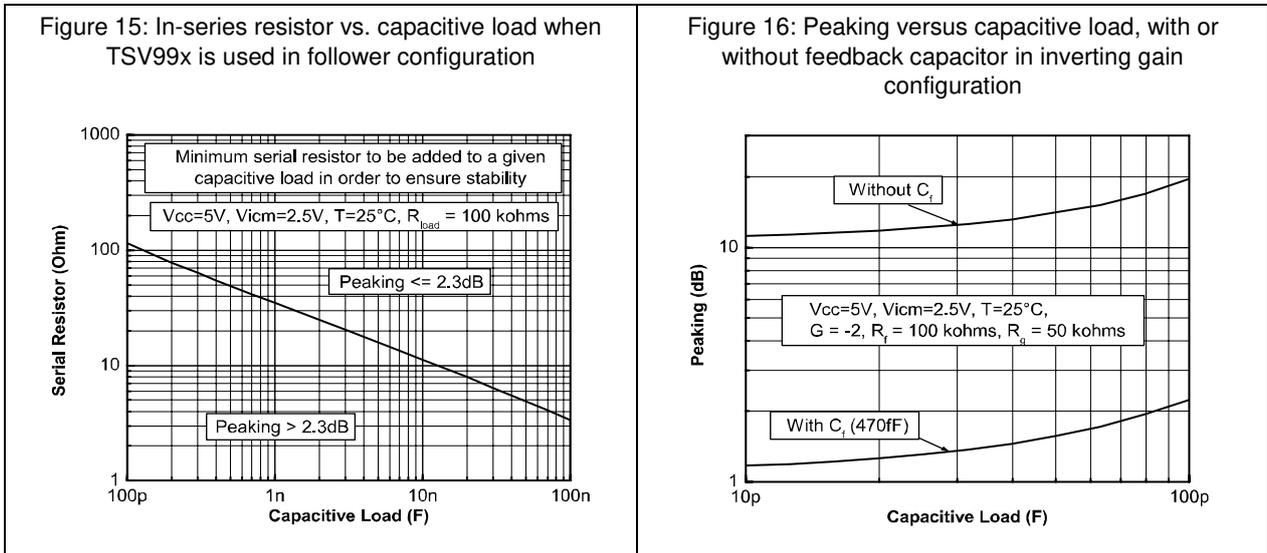

4.1 Driving resistive and capacitive loads

These products are low-voltage, low-power operational amplifiers optimized to drive rather large resistive loads above 2 kΩ.

TSV99x products are not unity gain stable. To ensure proper stability they must be used in a gain configuration, with a minimum gain of -3 or 4.

However, they can be used in a “*follower*” configuration by adding a small, in-series resistor at the output, which drastically improves the stability of the device (*Figure 15* shows the recommended in-series resistor values). Once the in-series resistor value has been selected, the stability of the circuit should be tested on the bench and simulated with the simulation model.

Another way to improve stability and reduce peaking is to add a capacitor in parallel with the feedback resistor. As shown in *Figure 16*, the feedback capacitor drastically reduces the peaking versus capacitive load (inverting gain configuration, gain = -2).

4.2 PCB layouts

For correct operation, it is advised to add 10 nF decoupling capacitors as close as possible to the power supply pins.

4.3 Macromodel

An accurate macromodel of the TSV99x is available on STMicroelectronics’ web site at www.st.com. This model is a trade-off between accuracy and complexity (that is, time simulation) of the TSV99x operational amplifiers. It emulates the nominal performances of a typical device within the specified operating conditions mentioned in the datasheet. It helps to validate a design approach and to select the right operational amplifier, *however, it does not replace on-board measurements*

5 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK[®] packages, depending on their level of environmental compliance. ECOPACK[®] specifications, grade definitions and product status are available at: www.st.com. ECOPACK[®] is an ST trademark.

6 Ordering information

Table 13: Order codes

Order code	Temperature range	Package	Packing	Marking
TSV991ILT	-40 °C to 125 °C	SOT23-5	Tape and reel	K130
TSV991AILT				K129
TSV991IQ2T		DFN8 2x2		K1F
TSV991AIQ2T				K1E
TSV991AIQ1T		DFN6 1.3x1.6x0.55		K5
TSV992IST		MiniSO8		K132
TSV992AIST				K135
TSV992IDT		SO8		V992I
TSV992AIDT				V992AI
TSV994IPT		TSSOP14		V994I
TSV994AIPT				V994AI
TSV994IDT		SO14		V994I
TSV994AIDT				V994AI
TSV991IYLT ⁽¹⁾	-40 °C to 125 °C automotive grade	SOT23-5	K149	
TSV991AIYLT ⁽¹⁾			K150	
TSV992IYDT ⁽¹⁾		SO8	V992IY	
TSV992AIYDT ⁽¹⁾			V992AY	
TSV992IYST ⁽¹⁾		MiniSO8	K149	
TSV992AIYST ⁽¹⁾			K150	
TSV994IYDT ⁽¹⁾		SO14	V994IY	
TSV994AIYDT ⁽¹⁾			V994AY	
TSV994IYPT ⁽¹⁾		TSSOP14	V994IY	
TSV994AIYPT ⁽¹⁾			V994AY	

Notes:

⁽¹⁾Qualified and characterized according to AEC Q100 and Q003 or equivalent, advanced screening according to AEC Q001 & Q 002 or equivalent.

In the table above, all packages except the SO14 are "moisture sensitivity level 1" as per Jedec J-STD-020-C. SO14 is Jedec level 3.
