Dimming Control Details

Parameters	Minimum	Typical	Maximum
10V output voltage	9.8 V	10 V	10.2 V
10V output source current	-10 mA	—	2 mA
Absolute maximum voltage on the 0-10V input pin	-2 V	—	15 V
Source current on 0-10V input pin	0 mA	—	1 mA

The dimmer control is operated from either a potentiometer or from an input signal of 1 – 10 Vdc. Recommended implementations are provided below.

Option 1 - Potentiometer Control

Option 2 - DC Input

Notes:

1. For the driver to operate properly, the load voltage must be maintained above the minimum voltage threshold (approx. 33% of the max. output voltage for any given model).
2. If the dimming voltage is varied from 10V down to 0V, the output current can be varied from 100%Io down to 10-20%Io.
3. Do not connect the GND of dimming to the output; otherwise the LED driver can not work normally.
