

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Solutions for Outside Plant

3M Telecommunications offers an extensive range of housings and closures for outside plant. They are available in a variety of sizes, made from either plastic or metal. For housings, the preferred connection technologies are SID or QSA/LSA plus. For closures the proven splice methods Scotchlok or MS² are more appropriate. These give the maximum number of splices in the smallest possible space. With optical fibre cable, fibre management is more important than density. 3M Telecommunications extensive 'know-how' has produced a variety of closure sealing options. Both encapsulated and mechanically-closed closures are available. For example, the BPEO family of closures are re-enterable several times and do not require specialist tools or additional materials such as gaskets or mastic.

2. Solutions for Outside Plant	104 - 227

2.1 Copper Splicing

Description - 3M™ Scotchlok™ Connectors and Tools

Over 40 years ago, 3M™ introduced the industry's original U element connector, the Scotchlok UR Connector. The latest series of connectors, the Scotchlok UR2, UY2, and UB2A Connectors, feature that same originality in technology advantages, building on the successful Scotchlok Connector's design, shape, color-coded cap concepts, and element technology.

The Series 2 Connectors additionally offer full wire range capability, increased port size to accommodate up to 2.08 mm (0.082») insulation sizes, double elements in all products, and a solvent resistant plastic construction.

UR2/UR2-D Butt Connectors

The UR2 Connector accepts two or three solid copper conductors that can be of different wire

gauges for butt splicing. The connector is filled with a moisture resistant sealant and the UR2-D Connector is a dry version. **RUS Listed**

UY2/UY2-D Butt Connectors

The size of the UY2 Connector reduces the splicing bundle O.D. to a minimum. The wires joined can

be of different wire gauges. Factory inserted sealant seals out moisture. In addition, the UY2 Connector is available in a dry version, UY2- D Connector. **RUS Listed**

UB2A/UB2A-D Tap Connectors

The UB2A Connector has a pre-crimp feature that gives the user a time-saving edge. By positioning

the connector on the conductor and precrimping, the conductor is prevented from slipping out of the connector before the crimp is completed.

Like the UR2 Connector, a factory sealant insulates against moisture and seals out corrosion. The UB2A Connector permits tapping directly onto an existing conductor without interrupting service. In ready access closures, the UB2A Connector eliminates cutting cable pairs, opening circuits, and piecing out wires. The UB2A-D Connector is a dry version of the UB2A Connector. **RUS Listed**

211 Trim-Out Connector

The Scotchlok™ 211 Trim-Out Connector is a polypropylene, moisture-resistant, self-stripping insulation

displacement contact device with a built-in cut-off blade and a test port. Wires are positioned in the connector from the sides, allowing the 211 Connector to be used as a maintenance connector for replacing problem connectors without interrupting service. The 211 Connector may also be used for standard two-wire butt type splicing operations.

A pre-crimp feature permits easy, positive connector positioning by gripping the conductors until the crimp is completed. Excess wire is cut off when the connector is crimped. **RUS Listed**

557TG Connector

Use the Scotchlok 557TG aerial connector to electrically connect two dropwire solid copper legs, insulate

and provide moisture protection for the connection.

2.1 Copper Splicing

Description - 3M™ MS²™ 25 -Pair Splice Modules and Accessories

MS² 25-Pair Super-Mini Splicing Modules

The MS² Super-Mini 25-pair and MS² Super Mate 25-pair Splicing Modules provide the reliability of soldered connections, the efficiency of multi-pair splicing, plus the proven performance of MS² splicing system.

The MS² 4000TR Series Super-Mini and 4005TR Series Super Mate Modules are the basic components of MS² Modular System Splicing from 3M™. The modules are building blocks of a systematized splicing technology that can reduce installation time of outside or inside plant, and in addition can reduce reworking demands, saving both time and effort in your construction and maintenance programs. To make your job easier, all MS² modules are now transparent.

U-shaped contacts enable solder-equivalent connections

The MS² 4000TR 25-pair Series Super-Mini and MS² 4005TR Super Mate Modules feature an array of U-shaped, phosphor-bronze contacts and stainless steel cut-off blades.

As a module is crimped, each contact strips the insulation from the positioned wire and securely grips the conductor. During this crimping operation, the cut-off blades inside each module trim the excess wire.

A single crimp completes a gas-tight connection on all 25-pairs in the module. It's simple and fast, because there's no need to strip or trim any of the individual pairs.

Pair testing is easy

Test entry ports on the front side of all modules provide access for testing individual pairs. All tests can be accomplished without opening the module, stripping insulation, or otherwise interrupting service.

The rugged design and construction of the modules can withstand crimping and reopening to facilitate transfers or cable rearrangements.

MS² 4000-G/TR Super-Mini Splicing Module

The new 4000-G/TR Super-Mini Splicing Module not only meets CAT-5 requirements of the TIA/EIA 568A and the ISO/IEC 11801:1995 for high-speed connectors, but it also delivers in place performance withstanding extended exposure to various conditions of extremely high humidity, including water immersion, while maintaining insulation resistance and circuit integrity.

MS² 4000-DWP/TR Module with Sealant Box

The 4000-DWP/TR 25-pair module combines a 4000- D/TR Super-Mini Module with a 4075-S Sealant Box. This combination offers waterproof

splicing of copper in buried, aerial, and under ground applications.

The module also makes reentry into splices encapsulated with re-enterable gel much easier. Because the sealant box prevents the encapsulants from filling the wire channels and test entry ports, modules may be tested at any time once the sealant box is removed.

The term "waterproof" applies to this system as determined according to 3M™ Test Method No. TP0200-05. Users should write for this method to determine suitability for application.

The MS² 4008D/TR 25-pair Series Super-Mini Modules are similar to the 4000TR Series, except that the cut-off blades have been removed from the bottom of the modules. This allows the run of through wires to be half-tapped without cutting the conductors. The wires in the base are electrically connected, but are not cut off. Both 4000TR and 4008TR Series Modules are available dry, or encapsulated. **RUS Listed**

2.1 Copper Splicing

Description - 3M™ MS²™ 25 -Pair Splice Modules and Accessories

MS² 4075-S Sealant Box

The 4075-S Sealant Box is a molded PBT polyester box designed to be used with the MS² 4000 Series Super-Mini Modules.

One applicator tool is included with every order. **RUS Listed**

MS² 4005-DPM/TR Super Mate Pluggable Module

4005-DPM/TR 25-pair Series Super Mate Pluggable Modules increase productivity and reduce expense by avoiding the time and cost-intensive job of cutting and re-splicing conductors for re-arrangement, addition, and removal of apparatus and stubs. The 4005-DPM/TR Series Super Mate Modules plug into other Super Mate Modules and onto the top of the 4000-D/TR Super-Mini Module Series for bridging applications. The 4005-CBM/TR Series Modules is for bridging to encapsulated 4000-C Series Modules, as a bridge only. The UL Listed 4005-DPM/FR is for applications which require a flame-retardant module.

MS² 4077 Series Sealant Boxes

Designed for use with MS² 4005-DPM/TR Super Mate Modules and/or in combination with 4000-D/TR Modules. The Sealant Boxes provide waterproof protection in PIC splicing applications where one or more modules are plugged together.

One applicator tool is included with each box of 12 sealant boxes.

The term "waterproof" applies to this system as determined according to 3M™ Test Method No. TP0200-05. Users should write for this method to determine suitability for application. **RUS Listed**

- 4077-A One 4005-DPM/TR Module
- 4077-B One 4000-D/TR and one 4005-DPM Module
- 4077-C Two 4005-DPM/TR Modules
- 4077-D Three 4005-DPM/TR Modules

For closures, please, see chapter 2.2

<p>> 4005-DPM/TR/36PTJ Preterminated Jumper Assemblies The assemblies consist of 24 AWG, PIC, unsheathed 25-pair binder group terminated on each end with a 4005-DPM Module. It enables quick restoration of cut cable and is available in 91,4 cm (36") and 182,9 cm (72") lengths with transparent covers.</p>	12 assy./kit 12/cs. 36" 2,63 (5.8) 72" 3,8 (8.5)	12 each 12 each	4005-DPM/TR/36PTJ
<p>> Bottom Test Plug The 4005-DPM/BTP is a test plug assembly consisting of a 4005- DPM module attached by a 60,9 cm (24") jumper to a module designed to plug into the bottom of a Super-Mini module. This assembly enables re-entry into any Super-Mini/Super Mate combination splice without interruption of service.</p>	1/bag 12/cs.	12 each	4005-DPM/BTP
<p>> Marking Pen Use the 4039 Marking Pen for permanent marking of MS² modules for easy identification at a later date.</p>	12/box 144/cs. 0,5 (1.1)	144 each	4039
<p>> Half-Tap Cover Used to protect wire ends after the half-tap has been cut out of the MS² Super-Mini 4008 Half-Tap Module in pulp/paper and pressurized PIC cable and vault splices.</p>	12/bag 120/cs. 1,4 (3.1)	120 each	4078-C

2.1 Copper Splicing

Description - 3M™ MS²™ 10 -Pair Splice Modules and Accessories

MS² 10-Pair Super-Mini Splicing Modules

Multi-pair splicing; full wire range

The MS² 10-Pair Super-Mini Splicing Modules provide the reliability of soldered connections, plus the efficiency of multi-pair splicing in 10-pair units. This eliminates the need to strip or trim any of the individual pairs, saving time and simplifying the process.

For added convenience and efficiency, all MS² super-mini modules accept 0.35 mm - 0.9 mm (26-19 AWG) solid copper up to a maximum insulation outside diameter of 1.8 mm (0.70) PIC, pulp and paper-insulated conductors.

Solder-equivalent connections

The MS² 10-pair super-mini modules feature an array of U-shaped, phosphor-bronze contacts and stainless steel cut-off blades. As a module is crimped, each contact strips the insulation from the positioned wire and securely grips the conductor. During this crimping operation, the cut-off blades inside each module trim the excess wire. A single crimp completes a gas-tight, solder equivalent connection on all pairs in the module.

MS² 9700-10/TR Module for two-wire straight splicing

The 9700-10/TR module provides for two-wire straight splicing. Like all super-mini modules, the 9700-10 module is designed so that wire gauges and insulation types may be mixed in the module.

MS² 9700-G/TR Super Mini Module

Encapsulated Super-Mini Module for protection against humidity and condensation.

MS² 9708-10/TR Module for half-tap splicing

The 9708-10 Super-Mini Module is similar to the 9700-10 module, except that the cut-off blades have been eliminated from the bottom of the modules. This allows the through wires to be half-tapped without cutting the conductors. The wires in the base are electrically connected, but are not cut off.

2.1 Copper Splicing

Description - 3M™ MS²™ 10 -Pair Splice Modules and Accessories

MS² 9700 Series 10-Pair Super Mate Pluggable Modules

mate modules mate with other super mate modules, allowing multiple counts as necessary.

- Cut apparatus in or out without re-splicing
- Easy pair testing
- Full wire range
- Rugged design
- Ideal for lightweight tooling applications

MS² 9705-10TR Super Mate Pluggable Modules transfer without interrupting service

MS² 9705-10TR Super Mate Pluggable Modules increase productivity and reduce expenses by avoiding the time- and cost-intensive job of cutting and resplicing conductors for re-arrangements, additions, and removals of apparatus and stubs.

With super mate pluggable modules you can do it all, 10 pairs at a time, in “make before break” fashion — without interrupting service. Once a splice is in place, you have the flexibility to complete future transfers by simply plugging and unplugging the existing modules. Using simple handtools, super

2.1 Copper Splicing

Description - 3M™ MS²™ 25-Pair Modular Splicing Rigs & Equipment

MS² 25-Pair Super-Mini Splicing Modules

3M MS² splicing tools and equipment are easy to use in any kind of splicing operation, regardless of the environment or working conditions. By designing system components and techniques that are interchangeable, 3M simplifies the splicing task and reduces potential inventory headaches. Included in the system are detailed step-by-step instructions for each splicing application, user-friendly parts and components, and testing equipment to optimize splice accuracy.

Systemized splicing technology

MS² splicing simplifies wire joining and terminating operations by allowing many jobs to be performed with the same components, tools, and techniques. Any of five standard splicing rigs with MS² splicing modules could meet all your multi-pair splicing requirements in inside or outside plant — new construction, cable rearrangements or maintenance. Easily learned procedures, designed to assure both splicing accuracy and good housekeeping, make the system's components simple to master.

MS² 4021-M2/36 Splicing Rig

The 4021-M2/36 Splicing Rig is a complete splicing rig designed for one-person fold-back or inline splicing. This rig contains the 4036-25 Hand Crimper.

MS² 4049 Lite Rig

The MS² 4049 Lite Rig is a complete splicing rig and provides many features and benefits.

MS² 4026-A Module Maintenance Kit

The 4026-A Module Maintenance Kit contains the tools necessary for reentry of Super-Mini and Super Mate Modules

2.2 Splice Protection Products

Description - Closures SLiC™

3M Floating Bond, 3M Rigid Bond, 3M Spiral End Seal

The 3M SLiC aerial closure is a single-piece aerial closure, easily installed in construction or maintenance situations. The one piece construction permits complete splice access after placement without removal of the closure or bonding from the cables. The closures are free breathing and suitable for straight, butt and branch splices of non-pressurised communication cables.

Splices are protected by the closure's double-wall moulded polyethylene construction. The durable SLiC closure will not crack or break in even the harshest environment. All components are attached to the closure.

Due to its interlocking ends, the SLiC aerial closure can expand to meet any size sheath opening without special kits, eliminating excess inventory. The 2 x 29, 3 x 33, 5 x 33, and 7 x 33 closures can be extended while maintaining their initial strength. The SLiC aerial closure does not require taping, bricking or any special labour-intensive practices. The end seals assure a snug fit on cables and eliminate the need for a drip collar. Sealing collars or tape are not required when using the SLiC closure.

The two, three, five, seven, and nine-inch diameter closures feature a universal end seal to handle any plant configuration. There are six sizes available, accommodating splice openings from 254 to 635 mm (10 to 25 inches). **RUS listed**

Fewer parts and easier installation with the SLiC Aerial Closure.

- Superior seal
- Easily adaptable
- Single piece design
- Double wall moulded construction
- Made from durable, rugged materials
- Easy to access and re-enter

Specifications

- One piece construction
- Provides easy installation; no loose parts
- Double walled, moulded construction
- Resists breaking or cracking
- Interlocking ends
- Extendible for long sheath openings
- Hanger/bonding system
- No external or additional bonding material required
- Quick release latch
- Easy re-entry
- Attached sheath retention (SR) bracket
- Protects cable sheath pull-out or movement (only for rigid bond)
- Spiral end seal
- One size fits multiple cable configurations

2.2 Splice Protection Products

Description - Closures SLiC™

SLiC Aerial Terminal and SLiC Aerial Terminal with Spiral End Seal

The 3M SLiC Aerial Terminal and the SLiC Aerial Terminal with Spiral End Seal are distribution terminals and closures contained within a lightweight, double-wall moulded-plastic housing designed for fixed-count termination of aerial drop wires. Special block configurations required by the individual customer are also available and may be completed either at the factory or by the customer.

End seals of the SLiC Terminal are designed to assure proper sizing and a snug fit around the cable sheath. This eliminates the need for drip collars to prohibit water from entering the splice chamber. The

SLiC Terminal with Rubber End Seal comes packaged with singleport end seals; however, customers may use double-port or tripleport end seals as their applications require. The 7.6 cm SLiC Terminal with spiral end seal comes packaged with three port end seals. And, the 12.7 cm terminal comes packaged with four port end seals.

Specifications

- Two-closure-in-one housing design
Separates splice and drop chamber
- One piece construction
Eases installation
- Self-healing drop wire ports
Minimises weather and insect problems
- Sleeves extend in either or both directions
Eliminates need for separate rehabilitation and distribution splices; accommodates long sheath openings
- Accommodates a variety of terminating blocks
Adaptable to user requirements
- Multiple distribution counts
Counts range in multiples of 5, from 5 to 25
- Spiral end seal
One size fits multiple cable configurations
