

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

**REFERENCE FREQUENCY 16.368 MHz, 2nd IF FREQUENCY 4.092 MHz
RF/IF FREQUENCY DOWN-CONVERTER +
PLL FREQUENCY SYNTHESIZER IC FOR GPS RECEIVER****DESCRIPTION**

The μ PB1007K is a silicon monolithic integrated circuit for GPS receiver. This IC is designed as double conversion RF block integrated Pre-Amplifier + RF/IF down-converter + PLL frequency synthesizer on 1 chip.

This IC is lower current than the μ PB1005K and packaged in a 36-pin QFN package.

This IC is manufactured using our 30 GHz f_{max} UHS0 (Ultra High Speed Process) silicon bipolar process.

FEATURES

- Double conversion : $f_{REFin} = 16.368$ MHz, $f_{1stIFin} = 61.380$ MHz, $f_{2ndIFin} = 4.092$ MHz
- Integrated RF block : Pre-Amplifier + RF/IF frequency down-converter + PLL frequency synthesizer
- Needless to input counter data : fixed division internal prescaler
 - VCO side division : $\div 200$ ($\div 25$, $\div 8$ serial prescaler)
 - Reference division : $\div 2$
- Supply voltage : $V_{CC} = 2.7$ to 3.3 V
- Low current consumption : $I_{CC} = 25.0$ mA TYP. @ $V_{CC} = 3.0$ V
- Gain adjustable externally : Gain control voltage pin (control voltage up vs. gain down)
- On-chip pre-amplifier : $G_P = 15.5$ dB TYP. @ $f = 1.57542$ GHz
NF = 3.2 dB TYP. @ $f = 1.57542$ GHz
- Power-save function : Power-save dark current $I_{CC}(PD) = 5$ μ A MAX.
- High-density surface mountable : 36-pin plastic QFN

APPLICATIONS

- Consumer use GPS receiver of reference frequency 16.368 MHz, 2nd IF frequency 4.092 MHz (for general use)

ORDERING INFORMATION

Part Number	Package	Supplying Form
μ PB1007K-E1-A	36-pin plastic QFN	<ul style="list-style-type: none">• 12 mm wide embossed taping• Pin 1 indicates pull-out direction of tape• Qty 2.5 kpcs/reel

Remark To order evaluation samples, contact your nearby sales office.

Part number for sample order: μ PB1007K-A

PIN EXPLANATION

Pin No.	Pin Name	Applied Voltage (V)	Pin Voltage (V)	Function and Application	Internal Equivalent Circuit
1	Pre-AMP _{out}	–	voltage as same as V _{CC}	Output pin of Pre-amplifier. Output biasing and matching required as it is a open collector output.	
2	V _{CC} (V _{reg})	2.7 to 3.3	–	Supply voltage pin of voltage regulator. This pin should be externally equipped with bypass capacitor to minimize ground impedance.	
3	GND(V _{reg})	0	–	Ground pin of voltage regulator.	
35	Pre-AMP _{in}	–	0.79	Input pin of Pre-amplifier. LC matching circuit must be connected to this pin.	
36	GND(Pre-AMP)	0	–	Ground pin of Pre-amplifier.	
4	RF-MIX _{in}	–	1.00	Input pin of RF mixer. 1 575.42 MHz band pass filter can be inserted between pin 1 and 4.	
5	GND(RF-MIX)	0	–	Ground pin of RF mixer.	
33	RF-MIX _{out}	–	1.30	Output pin of RF mixer. 1st IF filter must be inserted between pin 31 and 33.	
34	V _{CC} (RF-MIX)	2.7 to 3.3	–	Supply voltage pin of RF mixer. This pin should be externally equipped with bypass capacitor to minimize ground impedance.	
6	1stLO-OSC1	–	1.80	Pin 6 and 7 are each base pin of differential amplifier for 1st LO oscillator. These pins should be equipped with LC and varactor to oscillate on 1 636.80 MHz as VCO.	
7	1stLO-OSC2	–	1.80		
8	V _{CC} (1stLO-OSC)	2.7 to 3.3	–	Supply voltage pin of differential amplifier for 1st LO oscillator circuit.	

Pin No.	Pin Name	Applied Voltage (V)	Pin Voltage (V)	Function and Application	Internal Equivalent Circuit			
9	V _{cc} (PLL Block)	2.7 to 3.3	–	Supply voltage pin of PLL block. This pin should be externally equipped with bypass capacitor to minimize ground impedance.				
10	CP _{out}	–	Output in accordance with phase difference. This pin should be equipped with external RC in order to adjust dumping factor and cut-off frequency. This tuning voltage output must be connected to varactor diode of 1stLO-OSC.					
11	GND(PLL Block)	0	–	Ground pin of PLL block.				
12	V _{cc} (PLL Block)	2.7 to 3.3	–	Supply voltage pin of PLL block. This pin should be externally equipped with bypass capacitor to minimize ground impedance.				
13	LO _{out}	–	1.85	Monitor pin of 1/200 prescaler output.				
14	REF _{out} 2	–	1.68	Monitor pin of 1/2 prescaler output.				
15	Power Down1	0 or V _{cc}	–	Stand-by mode control pin of Pre-amplifier block, 1stLO-OSC block, charge pump prescaler block, LO output amplifier, RF mixer, IF mixer, 2ndIF amplifier.				
				<table border="1"> <tr> <td>Low</td> <td>OFF</td> </tr> <tr> <td>High</td> <td>ON</td> </tr> </table>		Low	OFF	High
Low	OFF							
High	ON							

Pin No.	Pin Name	Applied Voltage (V)	Pin Voltage (V)	Function and Application	Internal Equivalent Circuit				
16	Power Down2	0 or V _{CC}	–	Stand-by mode control pin of reference block. <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td>Low</td> <td>OFF</td> </tr> <tr> <td>High</td> <td>ON</td> </tr> </table>	Low	OFF	High	ON	
Low	OFF								
High	ON								
17	REF _{out} 1	–	–	Output pin of reference frequency. The frequency from pin 19 can be taken out as 3 V _{P-P} swing.					
18	REF _{in} 2	–	2.45	Input pin of reference frequency. This pin should be grounded through capacitor.					
19	REF _{in} 1	–	2.45	Input pin of reference frequency. This pin can use as an input pin of reference frequency buffer. This pin should be equipped with external 16.368 MHz oscillator (example: TCXO).					
20	V _{CC} (REF Block)	2.7 to 3.3	–	Supply voltage pin of reference block. This pin should be externally equipped with bypass capacitor to minimize ground impedance.					
21	GND(REF Block)	0	–	Ground pin of reference block.					
22	2ndIF _{out}	–	1.80	Output pin of 2nd IF amplifier. This pin output 4.092 MHz. This pin should be equipped with external buffer amplifier to adjust level to next stage on user's system.					
23	V _{CC} (2nd IF-AMP)	2.7 to 3.3	–	Supply voltage pin of 2nd IF amplifier. This pin should be externally equipped with bypass capacitor to minimize ground impedance.					
24	2ndIF _{bypass}	–	2.10	Bypass pin of 2nd IF amplifier. This pin should be grounded through capacitor.					
25	2ndIF _{in} 2	–	2.10	Pin of 2nd IF amplifier input 2. This pin should be grounded through capacitor.					
26	2ndIF _{in} 1	–	2.10	Pin of 2nd IF amplifier input 1. 2nd IF filter can be inserted between 26 and 28.					
27	GND(2nd IF-AMP)	0	–	Ground pin of 2nd IF amplifier.					

Pin No.	Pin Name	Applied Voltage (V)	Pin Voltage (V)	Function and Application	Internal Equivalent Circuit
28	IF-MIX _{out}	–	1.0	Output pin of IF mixer. IF mixer output signal goes through gain control amplifier before this emitter follower output port.	
29	V _{cc} (IF-MIX)	2.7 to 3.3	–	Supply voltage pin of IF mixer. This pin should be externally equipped with bypass capacitor to minimize ground impedance.	
30	V _{gc} (IF-MIX)	0 to 3.3	–	Gain control voltage pin of IF mixer output amplifier. This voltage performs forward control (V _{gc} up → Gain down).	
31	IF-MIX _{in}	–	1.97	Input pin of IF mixer.	
32	GND(IF-MIX)	0	–	Ground pin of IF mixer.	

Caution Ground pattern on the board must be formed as wide as possible to minimize ground impedance.

ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Test Conditions	Ratings	Unit
Supply Voltage	V _{CC}	T _A = +25°C	3.6	V
Total Circuit Current	I _{CCTotal}	T _A = +25°C	100	mA

NOTES ON CORRECT USE

- (1) Observe precautions for handling because of electro-static sensitive devices.
- (2) Form a ground pattern as widely as possible to minimize ground impedance (to prevent abnormal oscillation).
- (3) Keep the wiring length of the ground pins as short as possible.
- (4) Connect a bypass capacitor (example: 1 000 pF) to the V_{CC} pin.
- (5) High-frequency signal I/O pins must be coupled with the external circuit using a coupling capacitor.

★ **RECOMMENDED SOLDERING CONDITIONS**

This product should be soldered and mounted under the following recommended conditions. For soldering methods and conditions other than those recommended below, contact your nearby sales office.

Soldering Method	Soldering Conditions	Condition Symbol
Infrared Reflow	Peak temperature (package surface temperature) : 260°C or below Time at peak temperature : 10 seconds or less Time at temperature of 220°C or higher : 60 seconds or less Preheating time at 120 to 180°C : 120±30 seconds Maximum number of reflow processes : 3 times Maximum chlorine content of rosin flux (% mass) : 0.2%(Wt.) or below	IR260
VPS	Peak temperature (package surface temperature) : 215°C or below Time at temperature of 200°C or higher : 25 to 40 seconds Preheating time at 120 to 150°C : 30 to 60 seconds Maximum number of reflow processes : 3 times Maximum chlorine content of rosin flux (% mass) : 0.2%(Wt.) or below	VP215
Wave Soldering	Peak temperature (molten solder temperature) : 260°C or below Time at peak temperature : 10 seconds or less Preheating temperature (package surface temperature) : 120°C or below Maximum number of flow processes : 1 time Maximum chlorine content of rosin flux (% mass) : 0.2%(Wt.) or below	WS260
Partial Heating	Peak temperature (pin temperature) : 350°C or below Soldering time (per side of device) : 3 seconds or less Maximum chlorine content of rosin flux (% mass) : 0.2%(Wt.) or below	HS350

Caution Do not use different soldering methods together (except for partial heating).
