### DESCRIPTION

NEC's UPC2747TB and UPC2748TB are Silicon RFIC's which are manufactured using the NESAT III process. These devices are suitable as buffer amplifiers for cellular radio and other communication receivers. The UPC2747TB/48TB are pin compatible and have comparable performance as the larger UPC2747T/48T, so they are suitable for use as a replacement to help reduce system size. The IC's are housed in a 6 pin super minimold or SOT-363 package. NEC's stringent quality assurance and test procedures ensure the highest reliability and performance.

**PIN DESCRIPTION**

Pin No.	Pin Name	Applied Voltage (V)	Description	Internal Equivalent Circuit
1	Input	0.8 <sup>1</sup> 0.8 <sup>2</sup>	Signal input pin. An internal matching circuit, configured with resistors, enables 50 Ω connection over a wide bandwidth. A multi-feedback circuit is designed to cancel the deviations of h <sub>FE</sub> and resistance. This pin must be coupled to the signal source with a blocking capacitor.	
4	Output	2.79 <sup>1</sup> 2.72 <sup>2</sup>	Signal output pin. An internal matching circuit, configured with resistors, enables 50 Ω connection over a wide bandwidth. This pin must be coupled to the output load with a blocking capacitor.	
6	VCC	2.7 to 3.3	Power supply pin. This pin should be externally equipped with a bypass capacitor to minimize ground impedance.	
2 3 5	GND	0	Ground pin. This pin should be connected to system ground with minimum inductance. Ground pattern on the board should be formed as wide as possible. All the ground pins must be connected together with wide ground pattern to minimize impedance difference.	

The above diagram is for the UPC2747TB. The resistor marked with a star does not exist in the UPC 2748TB.
