

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

SERIES: VLD25-DIP | **DESCRIPTION:** LED DRIVER

FEATURES

- power LED driver
- wide input and output voltage range
- DIP package
- constant current output
- PWM dimming and analog dimming
- short circuit protection
- high efficiency up to 95%

| MODEL | input voltage range (Vdc) | output voltage range (Vdc) | output current range (mA) | ripple and noise max (mVp-p) | dimming control | efficiency typ (%) |

APPLICATION NOTES

1. Typical Application Circuits

To protect the LED(s), you could connect a PTC to input of all channels as shown in application circuit.
 Note: Negative output terminal should not connected to GND. Module may be damaged.

2. Digital Dimming Control

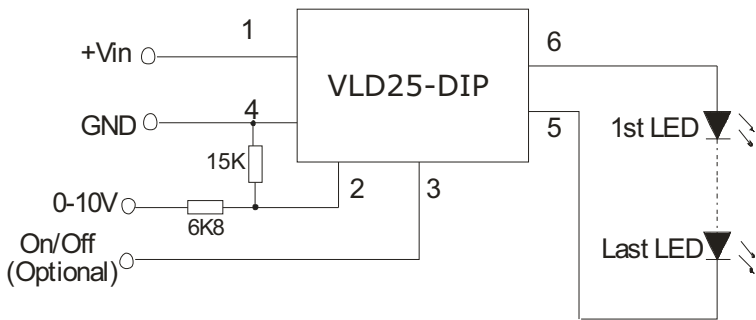

Formula for output current:

$$I_{o,set} = \frac{(DT-0.8)}{T} I_{o,norm}$$

$I_{o,set}$ refers to the expected output current value.
 $I_{o,norm}$ refers to the rated output current
 D refers to the pulse width of the PWM signal
 T refers to the cycle of the PWM signal

Note: This formula is only supplied as a reference and the output current may be deviated from for different load conditions. The Ton(min) of PWM signal must be greater than 0.8ms, otherwise the driver cannot be operated normally. It is natural for the driver to generate audible noise during dimming process because the frequency of the control circuit is within human audible range (20Hz~20kHz). In order to make the LED flashes not visible to human eye, the PWM dimming frequency is recommended to be set above 100Hz. PWM curve (Vin=24 V, 5 LEDs)
