Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

CUI INC®

SERIES: VWQBS2-SIP | **DESCRIPTION:** DC-DC CONVERTER

FEATURES

- 2 W isolated output
- wide input (4:1)
- industry standard 9 pin SIP package
- single unregulated outputs
- 1,500 V isolation
- short circuit protection
- wide temperature (-40~85°C)
- efficiency up to 79%

RoHS

APPLICATION NOTES

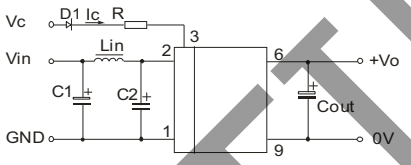
1. **Requirement on Output Load**
   To ensure this module can operate efficiently and reliably, During operation, the minimum output load is not less than 10% of the full load, and that this product should never be operated under no load! If the actual output power is very small, please connect a resistor with proper resistance at the output end in parallel to increase the load, or use our company's products with a lower rated output power.

2. **Overload Protection**
   Under normal operating conditions, the output circuit of these products has no protection against overload. The simplest method is to connect a self-recovery fuse in series at the input end or add a circuit breaker to the circuit.

Vin (Vdc)	Fuse (slow-blow type) (mA)
24	250
48	150

3. **Recommended Circuit**
   If you want to further decrease the input/output ripple, an "LC" filtering network may be connected to the input and output ends of the DC/DC converter, see (Figure 1).

Figure 1



However, the capacitance of the output filter capacitor must be proper. If the capacitance is too big, a startup problem might arise. For every channel of output, provided the safe and reliable operation is ensured, the greatest capacitance of its filter capacitor see (Table 1).

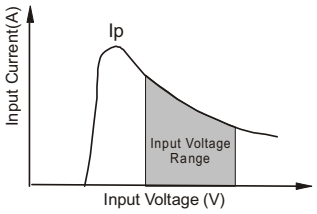
C1/C2	10 ~ 100 μF
Lin	4.7 ~ 120 μH
Cout	100 μF

4. **CTRL Terminal**
   When open or high impedance, the converter work well; When this pin is 'high'; the converter shutdown; It should be note that the input current should between 5~10 mA,exceeding the maximum 20 mA will cause permanence damage to the converter. The value of Vc not limited and desirable 5 Vdc, 12 Vdc, or directly with Vin. The value of R can be derived as follows:

$$R = \frac{V_C - V_D - 1.0}{I_C}$$

5. **Input Current**
   Nominal input voltage range. The input current of the power supply must be sufficient to the startup current (Ip) of the DC-DC module.

   General: Ip ≤1.4*Iin-max



6. **No parallel connection or plug and play**
