

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## 1A LDO Voltage Regulator with "GreenOperation"

☆GreenOperation-Compatible

### ■ GENERAL DESCRIPTION

The XC6220 series is a highly accurate, low noise, high speed, low dropout, and large current CMOS voltage regulator with GreenOperation function. The series consists of a voltage reference, an error amplifier, a current limiter, an inrush current prevention circuit and a phase compensation circuit plus a driver transistor.

With a 0.2Ω on-resistance driver transistor integrated and with output currents up to 1A, the ultra low dropout voltage performance greatly extends battery life as does the GreenOperation function which can switch between high speed and power save modes automatically. Low ESR ceramic capacitors can be used for the output stabilization capacitor ( $C_L$ ).

Output voltage is selectable in 0.05V increments within the range of 0.8V~5.0V, using laser trimming technologies.

An over current protection circuit and a thermal shutdown circuit are built in. The over current protection circuit will operate when the output current reaches its limit current. The thermal shutdown circuit will operate when the junction temperature reaches its limit temperature. The inrush protection circuit works by controlling the inrush current which is charged to  $C_L$  when the IC starts up. In this way, any fluctuations to  $V_{IN}$  caused by inrush current during system start up can be minimized.

The CE function enables the output to be turned off and the IC becomes a stand-by mode resulting in greatly reduced power consumption.

### ■ APPLICATIONS

- CD-ROM, CD-R/RW drives
- DVD drives
- HDD drives
- MIDs, UMPCs
- Digital still cameras, Video cameras
- Portable AV equipment

### ■ FEATURES

<b>Maximum Output Current</b>	: 1000mA (TYP.:1200mA limit) ( $1.2V \leq V_{OUT} \leq 5.0V$ )
<b>Dropout Voltage</b>	: 20mV @ 100mA ( $V_{OUT}=3.0V$ ) : 60mV @ 300mA ( $V_{OUT}=3.0V$ )
<b>Operating Voltage Range</b>	: 1.6V ~ 6.0V
<b>Output Voltage Range</b>	: 0.8V ~ 5.0V (0.05V increments)
<b>Accuracy</b>	: $\pm 1\%$ ( $V_{OUT} \geq 2.0V$ ) : $\pm 20mV$ ( $V_{OUT} < 2.0V$ )
<b>Low Power Consumption</b>	: 8 $\mu A$ (TYP.) in PS mode : 50 $\mu A$ (TYP.) in HS mode
<b>Operating Temperature</b>	: - 40°C ~ +85°C
<b>Thermal Shutdown</b>	: Detect 150°C, Release 135°C(TYP.)
<b>Inrush Current Protection</b>	: 700mA (MAX.)
<b><math>C_L</math> Auto Discharge</b>	: XC6220B/D Series
<b>CE Pull-Down Resistor</b>	: XC6220C/D Series
<b>Output Capacitor</b>	: Ceramic Capacitor Compatible
<b>Packages</b>	: USP-6C, SOT-25, SOT-89-5
<b>Environmentally Friendly</b>	: EU RoHS Compliant, Pb Free

### ■ TYPICAL APPLICATION CIRCUIT

### ■ TYPICAL PERFORMANCE CHARACTERISTICS

## PIN CONFIGURATION

USP-6C  
(BOTTOM VIEW)

SOT-25  
(TOP VIEW)

SOT-89-5  
(TOP VIEW)

\* The No.5 and 6  $V_{IN}$  pins should be connected. The No.1 and 2 pins  $V_{OUT}$  pins should be connected. The dissipation pad for the USP-6C package should be solder-plated in recommended mount pattern and metal masking so as to enhance mounting strength and heat release. If the pad needs to be connected to other pins, it should be connected to the  $V_{SS}$  (No. 4)

## PIN ASSIGNMENT

PIN NUMBER			PIN NAME	FUNCTIONS
SOT-25	SOT-89-5	USP-6C		
3	1	3	CE	ON/OFF Control
1	4	6 & 5	$V_{IN}$	Power Input
2	2	4	$V_{SS}$	Ground
5	5	1 & 2	$V_{OUT}$	Output
4	3	-	NC	No connection

## ■ PRODUCT CLASSIFICATION

### ● Selection Guide

Please see the optional setting for  $C_L$  discharge and internal CE pull-down.

PRODUCT NAME	CONDITIONS
XC6220A	without CE Pull-down resistor, without $C_L$ auto discharge (Semi-custom)
XC6220B	without CE Pull-down resistor, with $C_L$ auto discharge (Standard)
XC6220C	with CE Pull-down resistor, without $C_L$ auto discharge (Semi-custom)
XC6220D	with CE Pull-down resistor, with $C_L$ auto discharge (Semi-custom)

### ● Ordering Information

XC6220 ①②③④⑤⑥-⑦<sup>(\*)</sup>

DESIGNATOR	DESCRIPTION	SYMBOL	DESCRIPTION
①	Type of CE	A	without CE Pull-down resistor, without $C_L$ discharge (Semi-custom)
		B	without CE Pull-down resistor, with $C_L$ discharge (Standard)
		C	with CE Pull-down resistor, without $C_L$ discharge (Semi-custom)
		D	with CE Pull-down resistor, with $C_L$ discharge (Semi-custom)
② ③	Output Voltage	08~50	e.g. 3.0V → ①=3, ②=0
④	Output Voltage Accuracy	1	Output voltage {O.O0v} (the 2 <sup>nd</sup> decimal place is "0") :HS Mode Accuracy $\pm 1\%$ ( $V_{OUT(T)} \geq 2.1V$ ), within 0.02V ( $V_{OUT(T)} \leq 2.0V$ ) :PS Mode Accuracy $\pm 2\%$ ( $V_{OUT(T)} \geq 2.1V$ ), within 0.04V ( $V_{OUT(T)} \leq 2.0V$ )
		B	Output voltage {O.O5v} (the 2 <sup>nd</sup> decimal place is "5") :HS Mode Accuracy $\pm 1\%$ ( $V_{OUT(T)} \geq 2.05V$ ), within 0.02V ( $V_{OUT(T)} \leq 1.95V$ ) :PS Mode Accuracy $\pm 2\%$ ( $V_{OUT(T)} \geq 2.05V$ ), within 0.04V ( $V_{OUT(T)} \leq 1.95V$ )
⑤⑥-⑦	Packages Taping Type <sup>(*)</sup>	MR	SOT-25
		MR-G	SOT-25
		PR	SOT-89-5
		PR-G	SOT-89-5
		ER	USP-6C
		ER-G	USP-6C

<sup>(\*)</sup> The "-G" suffix indicates that the products are Halogen and Antimony free as well as being fully RoHS compliant.

<sup>(\*)</sup> The device orientation is fixed in its embossed tape pocket. For reverse orientation, please contact your local Torex sales office or representative. (Standard orientation: ⑤R-⑦, Reverse orientation: ⑤L-⑦)

## ■ BLOCK DIAGRAMS

●XC6220A Series (Semi-custom)

●XC6220B Series

●XC6220C Series (Semi-custom)

●XC6220D Series (Semi-custom)

\* Diodes inside the circuits are ESD protection diodes and parasitic diodes.

## ■ ABSOLUTE MAXIMUM RATINGS

Ta=25°C

PARAMETER	SYMBOL	RATINGS	UNITS
Input Voltage	V <sub>IN</sub>	6.5	V
Output Current <sup>(*1)</sup>	I <sub>OUT</sub>	1400	mA
Output Voltage	V <sub>OUT</sub>	V <sub>SS</sub> -0.3 ~ V <sub>IN</sub> +0.3	V
CE Input Voltage	V <sub>CE</sub>	V <sub>SS</sub> -0.3 ~ 6.5	V
Power Dissipation	Pd	250	mW
		600 (PCB mounted) <sup>(*2)</sup>	
		500

**NOTE:**

- \*1: Unless otherwise stated,  $V_{IN}=V_{OUT(T)}+1.0V$ .
- \*2:  $V_{OUT(E)}$  = Effective output voltage (see the voltage chart)  
(ie. The output voltage when " $V_{OUT(T)}+1.0V$ " is provided at the  $V_{IN}$  pin while maintaining a certain  $I_{OUT}$  value.
- \*3:  $V_{OUT(T)}$ : Nominal output voltage
- \*4:  $V_{dif}=\{V_{IN1}^{(6)} - V_{OUT1}^{(5)}\}$
- \*5:  $V_{OUT1}$ =A voltage equal to 98% of the  $V_{OUT(T)}$  when an amply stabilized  $I_{OUT} \{V_{OUT(T)}+1.0V\}$  is input in the HS mode.
- \*6:  $V_{IN1}$ =The input voltage when  $V_{OUT1}$  appears as input voltage is gradually decreased.
- \*7: For the XC6220B/D series only. The XC6220A/C series (semi-custom) discharges by resistors R1 and R2 only as shown in the block diagrams.
- \*8: For the XC6220A/C series, output voltage rises when the IC is in the high temperature stand-by mode.

## OPERATIONAL EXPLANATION

The voltage divided by resistors R1 & R2 is compared with the internal reference voltage by the error amplifier. The P-channel MOSFET which is connected to the V<sub>OUT</sub> pin is then driven by the subsequent output signal. The output voltage at the V<sub>OUT</sub> pin is controlled & stabilized by a system of negative feedback. The current limit circuit and short protect circuit operate in relation to the level of output current. The GO function monitors the output current and switches the IC between two operating modes according to the level of output current. Further, the IC's internal circuitry can be shutdown via the CE pin's signal.

### <GreenOperation>

The XC6220 series always operates in a green operation (GO) mode. The GO mode enables the IC to switch automatically between the high speed (HS) mode or the power save (PS) mode according to the level of output current. The switching point of the HS mode and the PS mode is fixed inside the IC. When the output current becomes I<sub>GOR</sub>=1.0mA (MIN.) or below, the mode changes automatically to the PS mode after a delay time of hundreds of microseconds. Supply current in light load is greatly reduced. Also when the output current becomes I<sub>GO</sub> 10mA (MAX.) or more, the mode changes automatically to the HS mode and the IC returns to high speed operation.

### <Low ESR capacitor>

The XC6220 series has a built-in phase compensation circuit which means that a stable output voltage is achieved even if the IC is used with low ESR capacitors. In order to ensure stable phase compensation it is recommended that a C<sub>L</sub> capacitor is connected as close as possible to the V<sub>OUT</sub> pin and V<sub>SS</sub> pin. For a stable power supply, please connect an input capacitor (C<sub>IN</sub>) between the V<sub>IN</sub> pin and the V<sub>SS</sub> pin.

Values required for the phase compensation are shown in the chart below. If a loss of the capacitance happens, the stable phase compensation may not be obtained. Please ensure to use a capacitor which does not depend on bias or temperature too much.

Recommended output capacitor (C<sub>L</sub>) Values corresponding to input capacitor (C<sub>IN</sub>)

OUTPUT VOLTAGE (V)	INPUT CAPACITOR VALUE		
	4.7 μF	10 μF	22 μF
0.80V~0.95V	×	×	22 μF
1.00V~1.45V	47 μF	47 μF	22 μF
1.50V~1.75V	47 μF	22 μF	10 μF
1.80V~2.95V	47 μF	6.8 μF	6.8 μF
3.00V~3.50V	47 μF	4.7 μF	4.7 μF
3.55V~5.00V	47 μF	10 μF	6.8 μF

× No option

### <Current Limiter, Short-Circuit Protection>

The XC6220 series includes a fold-back circuit, which aids the operation of the current limiter and circuit protection. When the load current reaches the current limit level, the fold-back circuit operates and output voltage drops. As a result of this drop in output voltage, output current also decreases. When the output pin is shorted, a current of about 180mA flows.

### <CE Pin>

The IC's internal circuitry can be shutdown via the signal from the CE pin with the XC6220 series. With the XC6220B/D series, output at the V<sub>OUT</sub> pin will be pulled down to the V<sub>SS</sub> level. However, with XC6220A/B series, the C<sub>L</sub> auto-discharge resistor is connected in parallel to R1 and R2 while the power supply is applied to the V<sub>IN</sub> pin. Therefore, the time until the V<sub>OUT</sub> pin reaches the V<sub>SS</sub> level is shortened. The output voltage becomes unstable, when the CE pin is open. If this IC is used with the correct output voltage for the CE pin, the logic is fixed and the IC will operate normally. However, with the XC6220C/D series, supply current may increase as a result of through current in the IC's internal circuitry when medium voltage is input.

**XC6220x301**

## OPERATIONAL EXPLANATION (Continued)

### <CL High Speed Auto-Discharge Function>

The XC6220B/D series can quickly discharge the electric charge at the output capacitor ( $C_L$ ), when a low signal to the CE pin, which enables the whole IC circuit put into an OFF state, is inputted to the CE pin via the N-channel transistor located between the  $V_{OUT}$  pin and the  $V_{SS}$  pin (cf. BLOCK DIAGRAM). The  $C_L$  auto-discharge resistance value is fixed to  $460\ \Omega$  ( $V_{IN}=6.0V$ ,  $V_{OUT}=5.0V$  at TYP.). The discharge time of the output capacitor ( $C_L$ ) is set by the  $C_L$  auto-discharge resistance ( $R_{DCHG}$ ) and the output capacitor ( $C_L$ ). By setting a time constant of the  $C_L$  auto-discharge resistance value [ $R_{DCHG}$ ] and an output capacitor value ( $C_L$ ) as  $\tau$  ( $\tau = C \times R_{DCHG}$ ), the output voltage after discharge via the N channel transistor is calculated by the following formulas.

$$V = V_{OUT} \times e^{-t/\tau}, \quad \text{or } t = \tau \ln( V_{OUT(E)} / V )$$

where

$V$  : Output voltage after discharge

$V_{OUT(E)}$  : Output voltage

$t$  : Discharge time

$\tau$  :  $C_L$  auto-discharge resistance  $R_{DCHG}$   $\times$  Output capacitor ( $C_L$ ) value  $C$

For the XC6220A/C series, output voltage may rises when in the high stand-by mode. Please note that in that case, the typical characteristics may worse. When the XC6220A/C series is used, please be noted the characteristics shown below.

XC6220A501xx

Output Voltage vs. Input Voltage

### <Thermal Shutdown>

When the junction temperature of the built-in driver transistor reaches the temperature limit level ( $150^\circ\text{C}$  TYP.), the thermal shutdown circuit operates and the driver transistor will be turned OFF. The IC resumes its operation when the thermal shutdown function is released and the IC's operation is automatically restored because the junction temperature drops to the level of the thermal shutdown release voltage.

### <Inrush Current Protection>

The XC6220 series includes an inrush current protection circuit.

The inrush current protection circuit suppresses inrush current charged to  $C_L$  when the IC starts up to 700 mA (MAX.) for approximately 1 ms.

\* Please note that the device can not provide the output current beyond 700 mA for a period of approximately 1 ms after the CE pin goes high.

## NOTES ON USE

1. Please use this IC within the stated absolute maximum ratings. The IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please strengthen  $V_{IN}$  and  $V_{SS}$  wiring in particular.
3. Please wire the input capacitor ( $C_{IN}$ ) and the output capacitor ( $C_L$ ) as close to the IC as possible.
