

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

General Description

The XR81101-CA02 is a clock synthesizer operating at a 3.3V/2.5V supply with Integer divider, using a 25MHz parallel resonant crystal reference input provides a 125MHz LVPECL outputs. The device is optimized for use with a 25MHz crystal (or system clock) and generates a 125MHz output clock for GE applications. The LVPECL outputs have very low phase noise jitter of sub 150fs, while consuming extremely low power.

The application diagram below shows a typical synthesizer configuration with any standard crystal oscillating in fundamental mode. Internal load capacitors are optionally available to minimize/eliminate external crystal loads. A system clock can also be used to overdrive the oscillator for a synchronous timing system.

The typical phase noise plot below shows the jitter integrated over the 1.875MHz to 20MHz range that is widely used in WAN systems. These clock devices show a very good high frequency noise floor below -150dB.

The XR81102 is a family of Universal Clock synthesizer devices in TSSOP-8 packages. The devices generate ANY frequency in the range of 100MHz to 1.5GHz by utilizing a highly flexible delta sigma modulator and a wide ranging VCO. These devices can be used with standard crystals or external system clock to support a wide variety of applications. This family of products has an extremely low power PLL block with core power consumption 40% less than the equivalent devices from competition. By second sourcing several of the existing sockets, these devices provides a very compelling power efficiency value benefit across all market segments.

Other clock multiplier and/or driver configurations are possible in this clock family and can be requested from the factory

FEATURES

- XR81102-CA02: Factory configured
- One differential LVPECL output pair
- Crystal oscillator interface which can also be overdriven using a single-ended reference clock
- Output frequency: 125MHz
- Crystal/input frequency: 25MHz, parallel resonant crystal
- RMS phase jitter @ 125MHz, 1.875MHz - 20MHz: < 150fs
- Full 3.3V or 2.5V operating supply
- -40°C to 85°C ambient operating temperature
- Lead-free (RoHS 6) package

APPLICATIONS

- Gigabit Ethernet
- Low-jitter Clock Generation
- Synchronized clock systems

Ordering Information – [page 8](#)

Typical Application

Absolute Maximum Ratings

Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Maximum Rating condition for extended periods may affect device reliability and lifetime.

Supply Voltage.....	+4.2V
Input Voltage.....	-0.5V to VCC + 0.5V
Output Voltage.....	-0.5V to VCC + 0.5V
Reference Frequency/Input Crystal.....	10MHz to 60MHz
Storage Temperature.....	-55°C to +125°C
Lead Temperature (Soldering, 10 sec).....	300°C
ESD Rating (HBM - Human Body Model).....	2kV

Operating Conditions

Operating Temperature Range.....-40°C to +85°C

Electrical Characteristics

Unless otherwise noted: $T_A = -40^{\circ}\text{C}$ to $+85^{\circ}\text{C}$, $V_{CC} = 3.3\text{V}\pm 5\%$ or $2.5\text{V}\pm 5\%$, $V_{EE} = 0\text{V}$

Symbol	Parameter	Conditions	*	Min	Typ	Max	Units
3.3V Power Supply DC Characteristics							
V_{CC}	Power Supply Voltage		•	3.135	3.3	3.465	V
I_{EE}	Power Supply Current	Measured at 156.25MHz and includes the output load current			68		mA
2.5V Power Supply DC Characteristics							
V_{CC}	Power Supply Voltage		•	2.375	2.5	2.625	V
I_{EE}	Power Supply Current	Measured at 156.25MHz and includes the output load current			58		mA
LVCMOS/LVTTL DC Characteristics							
V_{IH}	Input High Voltage	$V_{CC} = 3.465\text{V}$	•	2.42		$V_{CC} + 0.3$	V
		$V_{CC} = 2.625\text{V}$	•	1.83		$V_{CC} + 0.3$	V
V_{IL}	Input Low Voltage	$V_{CC} = 3.465\text{V}$	•	-0.3		1.03	V
		$V_{CC} = 2.625\text{V}$	•	-0.3		0.785	V
I_{IH}	Input High Current (OE, FSEL[1:0])	$V_{IN} = V_{CC} = 3.465\text{V}$ or 2.625V	•			15	μA
I_{IL}	Input Low Current (OE, FSEL[1:0])	$V_{IN} = 0\text{V}$, $V_{CC} = 3.465\text{V}$ or 2.625V	•	-10			μA
LVPECL DC Characteristics							
V_{OH}	Output High Voltage		•	$V_{CC} - 1.3$		$V_{CC} - 0.4$	V
V_{OL}	Output Low Voltage		•	$V_{CC} - 2.0$		$V_{CC} - 1.6$	V
V_{SWING}	Peak-to-Peak Output Voltage Swing		•	0.6		1.2	V
Crystal Characteristics							
X_{Mode}	Mode of Oscillations			Fundamental			
X_f	Frequency				25		MHz
ESR	Equivalent Series Resistance					50	Ω
C_S	Shunt Capacitance					7	pF
AC Characteristics							
f_{OUT}	Output Frequency				125		MHz
$t_{jit}(\phi)$	RMS Phase Jitter	125MHz Integration Range 1.875MHz-20MHz			0.15		pS
$t_{jit}(cc)$	Cycle-to-Cycle Jitter	Using 25MHz, 18pF resonant crystal	•			10	pS
t_R/t_F	Output Rise/Fall Time	20% to 80%	•	100		500	pS
Odc	Output Duty Cycle		•	48		52	%

* Limits applying over the full operating temperature range are denoted by a "•".

Pin Configuration

Pin Assignments

Pin No.	Pin Name	Type	Description
1	V _{CC}	Supply	Power supply pin.
2	XTAL_OUT	Output	Crystal oscillator output.
3	XTAL_IN	Input	Crystal oscillator input.
4	V _{EE}	Supply	Negative supply pin.
5	OE	Input (900KΩ pull-up)	Output enable pin - LVCMOS/LVTTL active high input. Outputs are enabled when OE = high. Outputs are disabled when OE = low.
6	V _{CC}	Supply	Power supply pin.
7	\bar{Q}	Output	Inverted LVPECL output.
8	Q	Output	Positive LVPECL output.

Functional Block Diagram

Typical Performance Characteristics

Figure 1 shows a typical phase noise performance plot for a 125MHz clock output. The data was taken using the industry standard Agilent E5052B phase noise instrument. The integration range is 1.875MHz to 20MHz.

Figure 1: 125MHz Operation, Typical Phase Noise at 3.3V

Application Information

Termination for LVPECL Outputs

The termination schemes shown in Figure 2 and Figure 3 are typical for LVPECL outputs. Matched impedance layout techniques should be used for the LVPECL output pairs to minimize any distortion that could impact your maximum operating frequency. Figure 4 is an alternate termination scheme that uses a Y-termination approach.
