

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

GENERAL DESCRIPTION

The XRP6668 is a dual channel synchronous current mode PWM step down (buck) converter capable of delivering up to 1 Amp of current per channel and optimized for portable battery-operated applications.

Based on a current mode 1.5MHz constant frequency PWM control scheme, the XRP6668 reduces the overall component count and solution footprint as well as provides a low output voltage ripple and excellent line and load regulation. It also implements a PFM mode to improve light load efficiency as well as a 100% duty cycle LDO mode. Output voltage is adjustable to as low as 0.6V with a better than 3% accuracy while a low quiescent current supports the most stringent battery operating conditions.

Built-in over temperature and under voltage lock-out protections insure safe operations under abnormal operating conditions.

The XRP6668 is offered in a RoHS compliant, "green"/halogen free 8-pin exposed pad SOIC package.

APPLICATIONS

- **Portable Equipments**
- **Battery Operated Equipments**
- **Audio-Video Equipments**
- **Networking & Telecom Equipments**

FEATURES

- **Dual Channel Step Down Converter**
- **Guaranteed 1A/1A Output Current**
 - Input Voltage: 2.5V to 5.5V
- **1.5MHz PWM Current Mode Control**
 - PFM Mode Operations at Light Load
 - 100% Duty Cycle LDO Mode Operations
- **Adjustable Output Voltage Range**
 - As Low as 0.6V with $\pm 3\%$ Accuracy
- **Internal Compensation Network**
- **30 μ A Quiescent Current**
- **Over Temperature & UVLO Protections**
- **RoHS Compliant "Green"/Halogen Free 8-Pin Exposed Pad SOIC Package**

TYPICAL APPLICATION DIAGRAM

Fig. 1: XRP6668 Application Diagram

ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

Input Voltage V_{IN} -0.3V to 6.0V
 EN, V_{FB} Voltages -0.3V to V_{IN}
 SW Voltage..... -0.3V to ($V_{IN} + 0.3V$)
 Storage Temperature -65°C to 150°C
 Lead Temperature (Soldering, 10 sec) 260°C
 ESD Rating (HBM - Human Body Model) 2kV
 ESD Rating (MM - Machine Model) 200V
 Junction Temperature (Notes 1, 3) 150°C

OPERATING RATINGS

Input Voltage Range V_{IN}2.5V to 5.5V
 Junction Temperature Range -40°C to 85°C
 Thermal Resistance
 θ_{JA} (8 Pin HSOIC) 42°C/W
 θ_{JC} (8 Pin HSOIC) 10°C/W

ELECTRICAL SPECIFICATIONS

Specifications with standard type are for an Ambient Temperature of $T_A = 25^\circ\text{C}$ only; limits applying over the full Operating Ambient Temperature range are denoted by a "•". Minimum and Maximum limits are guaranteed through test, design, or statistical correlation. Typical values represent the most likely parametric norm at $T_A = 25^\circ\text{C}$, and are provided for reference purposes only. Unless otherwise indicated, $V_{IN} = 3.6V$, $T_A = 25^\circ\text{C}$.

| Parameter | Min. | Typ. | Max. | Units | Conditions |
|------------------------------------|-------|-------|-----------|---------------|--|
| Input Voltage Range | 2.5 | | 5.5 | V | |
| Feedback Current | | | ± 100 | nA | |
| Regulated Feedback Voltage | 0.588 | 0.600 | 0.612 | V | |
| Output Voltage Accuracy | -3 | | +3 | % | • $I_{OUT} = 100\text{mA}$ |
| Reference Voltage Line Regulation | | | 1 | %/V | • $V_{IN} = 3V$ to 5.5V |
| Output Voltage Line Regulation | | | 1 | %/V | • $V_{IN} = 3V$ to 5.5V |
| Peak Inductor Current | 1.5 | 2.3 | | A | $V_{FB} = 0.5V$ or $V_{OUT} = 90\%$ |
| PWM Quiescent Current (Note 2) | | 376 | | μA | $V_{FB} = 0.5V$ or $V_{OUT} = 90\%$, dual channel |
| PFM Quiescent Current | | 30 | | μA | $V_{FB} = 0.65V$ or $V_{OUT} = 108\%$, dual channel |
| Shutdown | | 0.1 | 1 | μA | $V_{RUN} = 0V$, $V_{IN} = 4.2V$, dual channel |
| Oscillator Frequency | 1.2 | 1.5 | 1.8 | MHz | • $V_{FB} = 0.6V$ or $V_{OUT} = 100\%$ |
| Short-Circuit Oscillator Frequency | | 900 | | kHz | • $V_{FB} = 0V$ or $V_{OUT} = 0V$ |
| $R_{DS(ON)}$ of PMOS | | 0.24 | | Ω | $I_{SW} = 100\text{mA}$ |
| $R_{DS(ON)}$ of NMOS | | 0.21 | | Ω | $I_{SW} = -100\text{mA}$ |
| Under Voltage Lock Out | | 1.8 | | V | |
| SW Leakage | | | ± 1 | μA | $V_{RUN} = 0V$, $V_{SW} = 0V$ or 5V, $V_{IN} = 5V$ |
| Enable Threshold | | | 1.2 | V | • |
| Shutdown Threshold | 0.4 | | | V | • |
| RUN Leakage Current | | | ± 1 | μA | • |

Note 1: T_J is a function of the ambient temperature T_A and power dissipation P_D : ($T_J = T_A + (P_D * \theta_{JA})$)
 Note 2: Dynamic quiescent current is higher due to the gate charge being delivered at the switching frequency.
 Note 3: This IC has built-in over-temperature protection to avoid damage from overload conditions.
 Note 4: θ_{JA} is measured in the natural convection at $T_A = 25^\circ\text{C}$ on a high effective thermal conductivity test board (4 layers, 2S2P) of JEDEC 51-5 thermal measurement standard.
 Note 5: θ_{JC} represents the resistance to the heat flows the chip to package top case.

BLOCK DIAGRAM

PIN ASSIGNMENT

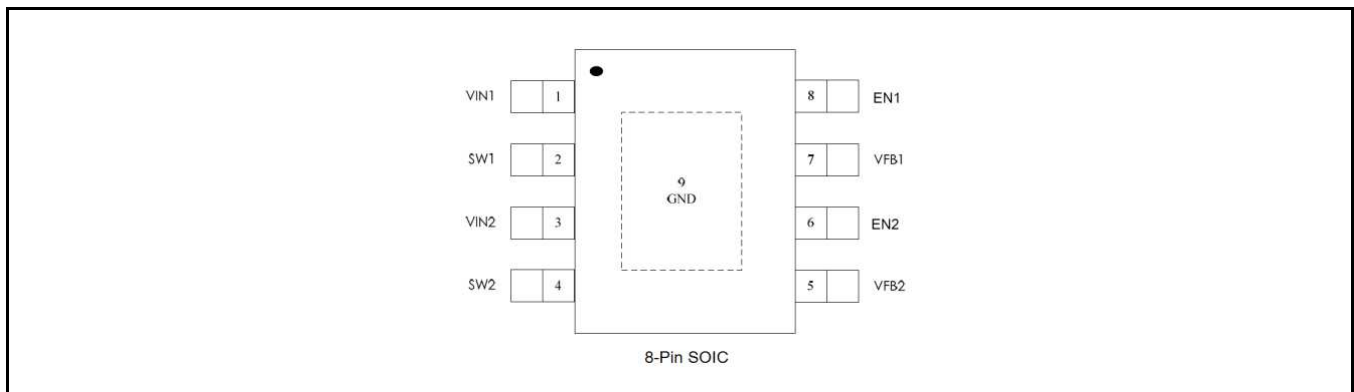

Fig. 3: XRP6668 Pin Assignment

**PIN DESCRIPTION**

| Name | Pin Number | Description |
|------|-------------|---|
| VIN1 | 1 | Channel 1 Power Input Pin. Must be closely decoupled to GND pin with a 4.7 μ F or greater ceramic capacitor. |
| SW1 | 2 | Channel 1 Switch Pin. Must be connected to Inductor. This pin connects to the drains of the internal main and synchronous power MOSFET switches. |
| VIN2 | 3 | Channel 2 Power Input Pin. Must be closely decoupled to GND pin with a 4.7 μ F or greater ceramic capacitor. |
| SW2 | 4 | Channel 2 Switch Pin. Must be connected to Inductor. This pin connects to the drains of the internal main and synchronous power MOSFET switches. |
| VFB2 | 5 | Channel 2 Feedback Pin. Receives the feedback voltage from an external resistive divider across the output. |
| EN2 | 6 | Channel 2 Enable Pin. Minimum 1.2V to enable the device. Maximum 0.4V to shutdown the device. |
| VFB1 | 7 | Channel 1 Feedback Pin. Receives the feedback voltage from an external resistive divider across the output. |
| EN1 | 8 | Channel 1 Enable Pin. Minimum 1.2V to enable the device. Maximum 0.4V to shutdown the device. |
| GND | Exposed Pad | Connect to GND. |

ORDERING INFORMATION

| Part Number | Temperature Range | Marking | Package | Packing Quantity | Note 1 | Note 2 |
|----------------|--------------------------------|-----------------------|-------------|------------------|--------------------------------|--------|
| XRP6668IDBTR-F | -40°C ≤ T _A ≤ +85°C | XRP6668I YYWW X | 8-Pin HSOIC | 3K/Tape & Reel | RoHS Compliant Halogen Free | |
| XRP6668EVB | XRP6668 Evaluation Board | | | | | |

"YY" = Year - "WW" = Work Week - "X" = Lot Number

TYPICAL PERFORMANCE CHARACTERISTICS

All data taken at $V_{IN} = 3.6V$, $T_J = T_A = 25^\circ C$ and apply to each individual channel unless otherwise specified - Schematic and BOM from Application Information section of this datasheet.

THEORY OF OPERATION

The typical application circuit of adjustable version is shown in figure 22.

Fig. 22: Typical Application

All explanation below pertaining to one channel of the XRP6668 and can be extrapolated to apply to the second channel.

INDUCTOR SELECTION

Inductor ripple current and saturation current rating are two factors to be considered when selecting the inductor value. A low DCR inductor is preferred.

The inductor value L can be calculated from the following equation:

$$L = (V_{IN} - V_{OUT}) \times \left(\frac{V_{OUT}}{V_{IN}}\right) \times \left(\frac{1}{f}\right) \times \left(\frac{1}{\Delta I_L}\right)$$

C_{IN} AND C_{OUT} SELECTION

A low ESR input capacitor can minimize the input voltage ripple. Voltage rating of the capacitor should be at least 50% higher than the input voltage. The RMS current of the input capacitor is required to be larger than the I_{RMS} calculated by:

$$I_{RMS} \cong I_{OMAX} \frac{\sqrt{V_{OUT}(V_{IN}-V_{OUT})}}{V_{IN}}$$

The ESR value is an important parameter to consider when selecting an output capacitor C_{OUT}. The output ripple V_{OUT} is determined by:

$$\Delta V_{OUT} \cong \Delta I_L \left(ESR + \frac{1}{8 \times f \times V_{OUT}} \right)$$

The output capacitor's value can be optimized for very low output voltage ripple and small circuit size. Voltage rating of the capacitor should be at least 50% higher than the output voltage. Higher values, lower cost ceramic

capacitors are now available in smaller sizes. These ceramic capacitors have high ripple currents, high voltage ratings and low ESR that make them ideal for switching regulator applications.

It is recommended to use X5R or X7R ceramic capacitors as they have the best temperature and voltage characteristics.

OUTPUT VOLTAGE SELECTION

The output voltage is adjustable via the external resistor network R1 and R2 as per the following formula:

$$V_{OUT} = 0.6V \times \left(1 + \frac{R2}{R1} \right)$$

THERMAL CONSIDERATIONS

Although thermal shutdown is built-in in XRP6668 to protect the device from thermal damage, the total power dissipation that XRP6668 can sustain is based on the package thermal capability. The formula to ensure safe operation is shown in Note 1. To avoid the XRP6668 from exceeding the maximum junction temperature, some thermal analysis is required.

GUIDELINES FOR PCB LAYOUT

To ensure proper operation of the XRP6668, please note the following PCB layout guidelines:

1. The GND, SWx and VINx traces should be kept short, direct and wide.
2. VFBx pin must be connected directly to the feedback resistors. Resistive divider R1/R2 must be connected in parallel to the output capacitor C_{OUTx}.
3. The Input capacitor C_{INx} must be connected to pin VINx as closely as possible.
4. Keep SWx node away from the sensitive VFB node since SWx signal experiences high frequency voltage swings.
5. Keep the negative plates of C_{INx} and C_{OUTx} as close as possible.
