

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

A New Direction in Mixed-Signal

1.5A 18V 1.4MHz Non Synchronous Step-Down Regulator

August 2012

Rev. 1.2.0

GENERAL DESCRIPTION

The XRP7659 is a current-mode PWM step-down (buck) voltage regulator capable of delivering an output current up to 1.5Amps. A wide 4.5V to 18V input voltage range allows for single supply operation from industry standard 5V, 9.6V and 12V power rails.

With a 1.4MHz constant operating frequency, integrated high-side MOSFET and loop compensation, the XRP7659 reduces the overall component count and solution footprint. Current-mode control provides fast transient response and cycle-by-cycle current limit. An integrated soft-start prevents inrush current at turn-on, and in shutdown mode the supply current drops to 0.1µA.

Built-in output over voltage (open load), over temperature, cycle-by-cycle over-current and under voltage lockout (UVLO) protection insure safe operation under abnormal operating conditions.

The XRP7659 is a pin and function compatible ($V_{IN} < 18V$) device to Monolithic Power Systems MP2359.

The XRP7659 is offered in a RoHS compliant, "green"/halogen free 6-pin SOT-23 package.

APPLICATIONS

- Distributed Power Architectures
- Point of Load Converters
- Audio-Video Equipment
- Medical & Industrial Equipment

FEATURES

- **1.5A Continuous Output Current**
 - **4.5V to 18V Wide Input Voltage**
 - **PWM Current-Mode Control**
 - 1.4MHz Constant Operation
 - Up to 92% Efficiency
 - **Adjustable Output Voltage**
 - 0.81V to 15V Range
 - ±3% Accuracy
 - **Enable Function and Soft Start**
 - **Built-in Thermal, Over-Current, UVLO and Output Over-Voltage Protection**
 - **Pin/Function Compatible to MP2359**
- RoHS Compliant, "Green"/Halogen Free 6-Pin SOT-23 Package**

1.5A 18V 1.4MHz Non Synchronous Step-Down Regulator

ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

- V_{IN}..... -0.3V to 20V
- V_{EN} -0.3V to V_{IN}+0.3V
- V_{SW} 21V
- V_{BS}.....-0.3V to V_{SW}+6V
- V_{FB}.....-0.3V to 6V
- Operating Junction Temperature..... 150°C
- Storage Temperature -65°C to 150°C
- Lead Temperature (Soldering, 10 sec)..... 260°C
- Power Dissipation Internally Limited
- ESD Rating (HBM - Human Body Model) 2kV
- ESD Rating (MM - Machine Model)500V

OPERATING RATINGS

- Input Voltage Range V_{IN}.....4.5V to 18V
- Maximum Output Current I_{OUT} (Min) 1.5A
- Ambient Temperature Range -40°C to +85°C
- Thermal Resistance θ_{JA}220°C/W

ELECTRICAL SPECIFICATIONS

Specifications are for an Operating Junction Temperature of T_J = 25°C only; limits applying over the full Operating Junction Temperature range are denoted by a “•”. Minimum and Maximum limits are guaranteed through test, design, or statistical correlation. Typical values represent the most likely parametric norm at T_J = 25°C, and are provided for reference purposes only. Unless otherwise indicated, V_{IN} = V_{EN} = 12V, V_{OUT} = 3.3V.

Parameter	Min.	Typ.	Max.	Units	Conditions
V _{IN} , Input Voltage	4.5		18	V	•
I _Q , Quiescent Current		0.8	1.1	mA	V _{FB} =0.9V
I _{SHDN} , Shutdown Supply Current		0.1	1.0	µA	V _{EN} =0V
V _{FB} , Feedback Voltage	0.785	0.810	0.835	V	
V _{FBOV} , Feedback Overvoltage Threshold		0.972		V	
I _{FB} , Feedback Bias Current	-0.1		+0.1	µA	V _{FB} =0.85V
R _{DSON} , Switch On-resistance ⁽¹⁾		0.35		Ω	I _{SW} =1A
I _{LEAK} , Switch Leakage Current		0.1	10	µA	V _{IN} =18V, V _{EN} =0V
I _{LIM} , Switch Current Limit	1.8	2.4		A	
V _{ENH} , EN Pin Threshold	1.5			V	
V _{ENL} , EN Pin Threshold			0.4	V	
V _{UVLO} , Input UVLO Threshold	3.3	3.8	4.3	V	V _{IN} Rising
V _{HYS} , Input UVLO Hysteresis		0.2		V	
f _{OSCL} , Oscillator frequency	1.1	1.4	1.7	MHz	
f _{OSC2} , Oscillator frequency		460		kHz	Short Circuit
D _{MAX} , Maximum Duty Cycle		90		%	V _{FB} =0.6V
D _{MIN} , Minimum Duty Cycle			0	%	V _{FB} =0.9V
t _{ON} , Minimum On Time ⁽¹⁾		100		ns	
T _{TOTSD} , Thermal Shutdown ⁽¹⁾		160		°C	
T _{HYS} , Thermal Shutdown Hysteresis ⁽¹⁾		20		°C	
t _{SS} , Soft-start time ⁽¹⁾		200		µs	

Note 1: R_{DSON}, t_{ON}, T_{TOTSD}, T_{HYS} and t_{SS} are guaranteed by design.

1.5A 18V 1.4MHz Non Synchronous Step-Down Regulator

BLOCK DIAGRAM

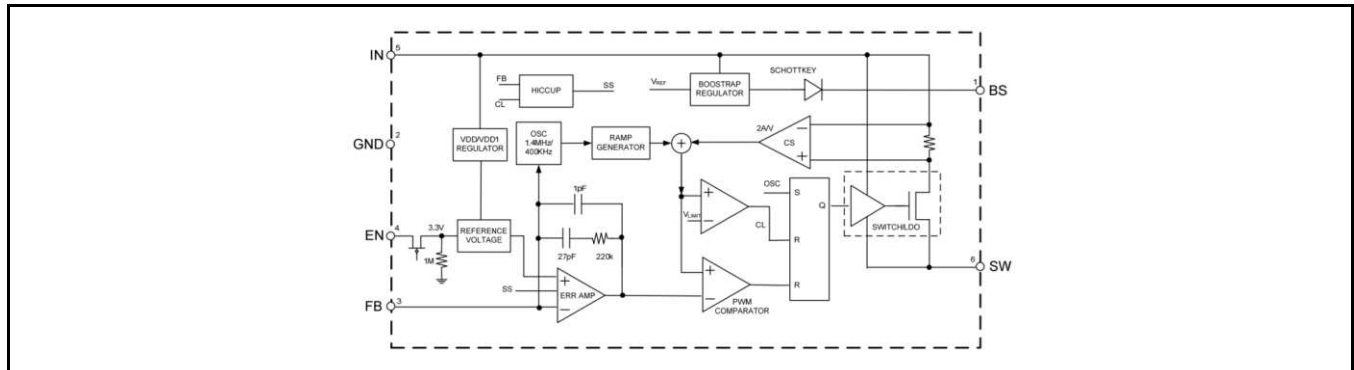

Fig. 2: XRP7659 Block Diagram

PIN ASSIGNMENT

Fig. 3: XRP7659 Pin Assignment

PIN DESCRIPTION

Name	Pin Number	Description
BS	1	Bootstrap pin. Connect a 10nF bootstrap capacitor between BS and SW pins. The voltage across the bootstrap capacitor drives the internal high-side MOSFET.
GND	2	Ground pin.
FB	3	Feedback pin. Connect to a resistor divider to program the output voltage. If V_{FB} exceeds 0.972V the OVP is triggered. If V_{FB} drops below 0.25V the short circuit protection is activated.
EN	4	Enable Input Pin. Forcing this pin above 1.5V enables the IC. Forcing the pin below 0.4V shuts down the IC. For automatic enable connect a 100kΩ resistor between EN and IN.
IN	5	Power Input Pin. Must be closely decoupled to GND pin with a 10μF/25V or greater ceramic capacitor.
SW	6	Power switch output pin. Connect to inductor and bootstrap capacitor.

ORDERING INFORMATION

Part Number	Temperature Range	Marking	Package	Packing Quantity	Note 1	Note 2
XRP7659ISTR-F	-40°C ≤ T _A ≤ +85°C	LCWW X	SOT23-6	3K/Tape & Reel	Halogen Free	
XRP7659EVB	XRP7659 Evaluation Board					

“YY” = Year – “WW” = Work Week – “X” = Lot Number; when applicable.

APPLICATION INFORMATION

The XRP7659 is a non-synchronous current-mode step-down DC-DC converter capable of driving a 1.5A load. The integrated high-side MOSFET has been optimized to provide high efficiency within XRP7659 operating ratings. The high switching frequency of 1.4MHz allows the use of a small inductor and a correspondingly small output capacitor that reduce the solution size and cost. The high switching frequency also provides a very fast transient response as shown in figure 11. The built in loop compensation, bootstrap diode and soft-start further reduce component cost. A host of protection features including UVLO, OCP, OTP, OVP and short-circuit help insure

safe operation under abnormal operating conditions.

PROGRAMMING THE OUTPUT VOLTAGE

To program V_{OUT} use a resistor divider $R1/R2$ as shown in figure 1. $R1$ in conjunction with the internal compensation comprises the loop compensation. Calculate $R2$ from:

$$R2 = \frac{R1}{\frac{V_{OUT}}{0.81V} - 1}$$

A resistor selection guide for common values of V_{OUT} is shown in table 1.

A New Direction in Mixed-Signal

1.5A 18V 1.4MHz Non Synchronous Step-Down Regulator

VOUT	R1(kΩ)	R2(kΩ)
1.8V	100	82
2.5V	39	18.7
3.3V	43	14
5.0V	47	9.09

Table 1: Resistor Selection

SELECTING THE INDUCTOR

Select the inductor for inductance L , saturation current I_{sat} and DC current I_{DC} . I_{sat} and I_{DC} should be larger than 2.4A and 2.2A respectively. This will allow the inductor to withstand an accidental overload until the IC's OCP get activated. Calculate the inductance from:

$$L = \frac{V_{OUT} \times (V_{IN} - V_{OUT})}{V_{IN} \times \Delta I_L \times f_s}$$

ΔI_L is inductor current ripple, nominally set at 30% of I_{OUT} .

SELECTING THE INPUT CAPACITOR

The input capacitor C_{IN} supplies the pulsating input current resulting from fast switching of the high-side MOSFET. Ceramic capacitors are recommended because they have low ESR/ESL and can therefore meet the high di/dt requirement. A 10μF capacitor is sufficient for most applications.

SELECTING THE OUTPUT CAPACITOR

The output capacitor C_{OUT} filters the inductor current ripple, providing DC to the load. C_{OUT} also limits the V_{OUT} transients arising from a sudden current load step. A 22μF ceramic capacitor is sufficient for most applications.

PCB LAYOUT GUIDELINES

Following guidelines will help safeguard against EMI related problems.

1. Minimize the loop area among C_{IN} , high-side MOSFET and D1. To achieve this, C_{IN} and D1 have to be placed as close to IC pins IN and SW as possible. Also the ground return of C_{IN} and D1 should be close. Use short and wide traces for connecting these components.
2. Minimize the loop area among D1, L1 and C_{OUT} . Use short and wide traces for connecting these components.
3. From the above it follows that the ground returns of C_{IN} , D1 and C_{OUT} should be as close as possible.
4. Route the sensitive FB trace away from noisy SW.

1.5A 18V 1.4MHz Non Synchronous Step-Down Regulator

TYPICAL APPLICATIONS

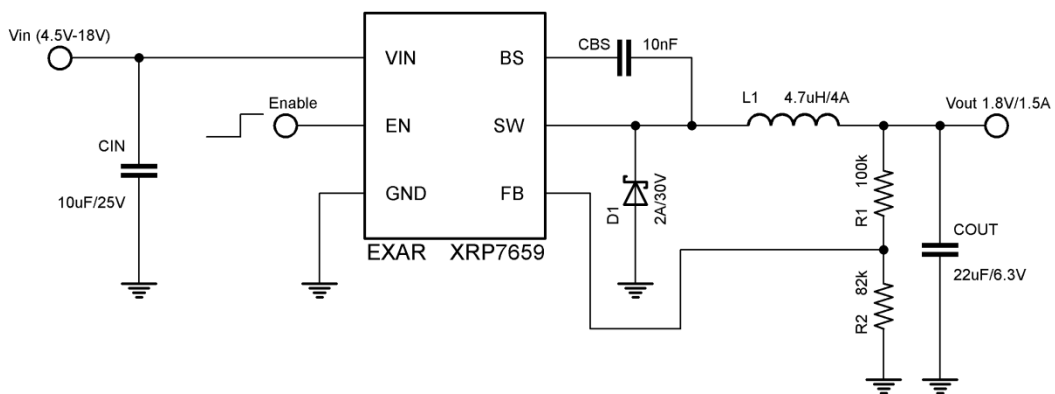

12V TO 5.0V/1.5A CONVERSION

12V TO 3.3V/1.5A CONVERSION

12V TO 1.8V/1.5A CONVERSION
