

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## 800-2500MHz MMIC WIDEBAND AMPLIFIER

### LNA, 18dB Gain, Low Current

#### DESCRIPTION

The ZAMP001 is an low current low noise amplifier designed for L band and IF applications. Although the ZAMP001 has been designed primarily for DBS applications the ZAMP001 is capable of extending to frequencies of 2.5GHz so it has a good fit with various applications. An additional benefit of the ZAMP001 is it's rising gain characteristic, this has been designed to counteract the gain losses found at the higher frequencies. The ZAMP001 has been optimized for input and output impedances of 50 ohms. The ZAMP001 complements the buffer amplifiers in the ZAMP series to give a low current high performance optimum solution. Packaged in a small SC70-6 with the minimum number of external bias components required it is the ideal solution for space and current limited applications.

SC70-6

#### FEATURES

- L and IF frequency band
- Low noise 5dB @ 1GHz
- Low current consumption 12mA typical
- Gain 18dB typical
- Rising gain
- IP3 8dBm @ 1Ghz
- 4.5 to 5.5V Supply Voltage
- Unconditionally stable
- SC70-6 SMD package

#### APPLICATIONS

- Satellite LNB receivers
- Set-top boxes
- TV tuners
- SMR (Special Mobile Radio)
- RLAN/WLAN
- General purpose

## APPLICATION NOTES

The ZAMP001 is a wideband RFIC amplifier designed for use primarily in DBS applications. The amplifier is designed to provide both a 50 Ohm input and output impedance and thus requires no additional matching components. The input and output signal connections each require a DC blocking capacitor (C1 and C2). A suitable value for these capacitors is around 100pF for the 950MHz to 2150MHz frequency range. For other frequency ranges the value of the capacitor should be such that its reactance at the lowest operating frequency is small when compared to 50 ohms. Supply de-coupling is also recommended and should take the form of a suitable 100pF capacitor, C3, for the 950MHz to 2150MHz frequency range. The 100pF capacitor should be mounted as close to the Vcc pin of the amplifier as is physically possible. An additional low frequency de-coupling capacitor, C4, with a value around 100nF is also advised.

An example layout for a test board for the ZAMP series can be seen above. This was designed for an FR4 board 1 x 1 inch, 0.016 inch thick with a copper thickness of 35 microns. Edge mounted SMA connectors were used for the RF signals. The inductor is not required for ZAMP001.
