

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Clock Distribution Fanout Buffers

A family of 28 buffers offers six fanout combinations, supports clock rates up to 750 MHz, and a wide range of input and output clock signals making it ideal to use across multiple applications with minimal design efforts.

Internal input termination eliminates the need for external termination and biasing components. In addition, the ultra low-additive jitter and highly effective power supply noise filtering leaves the majority of the jitter budget to the clock source.

The clock buffers devices are synergistic with Microsemi® industry-leading timing portfolio and, when used together, these devices provide customer improved board performance and complete timing solutions.

Available and Support

Clock Distribution Clock Buffers are in volume production. To learn more about Microsemi new clock buffers visit www.microsemi.com/timing-and-synchronization/clock-fanout-buffers. Full information, including complete data sheets and design manuals, is available to registered Microsemi customers. To register for a Microsemi account, visit www.microsemi.com/create-an-account.

Key Features

Clock Rates up to 750 MHz

Inputs

- LVPECL, LVDS, CML, HCSL or LVCMOS
- Devices with internal or external input termination available

Outputs

• LVPECL or LVDS

Ultra-Low Additive Jitter

• As low as 39 fs RMS

Power Supply Noise

As low as 48 fs RMS

Key Benefits

Preserve Signal Integrity

 Offer industry leading additive jitter and best power supply noise rejection (PSNR) performance

Ease Board Design

- Provide a flexible I/O structure; accept different types of input signals and produce different types of output signals
- Eliminate the need for external circuitry at the inputs with onchip internal input terminations

Building Block of a Complete Timing Solution

 Clock buffers are highly synergistic with Microsemi industryleading timing portfolio and offer tested interoperability and optimized performance

Microsemi makes no warranty, representation, or guarantee regarding the information contained herein or the suitability of its products and services for any particular purpose, nor does Microsemi assume any liability whatsoever arising out of the application or use of any product or circuit. The products sold hereunder and any other products sold by Microsemi have been subject to limited testing and should not be used in conjunction with mission-critical equipment or applications. Any performance specifications are believed to be reliable but are not verified, and Buyer must conduct and complete all performance and other testing of the products, alone and together with, or installed in, any end-products. Buyer shall not rely on any data and performance specifications or parameters provided by Microsemi. It is the Buyer's responsibility to independently determine suitability of any products and to test and verify the same. The information provided by Microsemi hereunder is provided "as is, where is" and with all faults, and the entire risk associated with such information is entirely with the Buyer. Microsemi does not grant, explicitly or implicitly, to any party any patent rights, licenses, or any other IP rights, whether with regard to such information itself or anything described by such information. Clock Distribution Fanout Buffers

Preserve Signal Integrity, Ease Board Design With Microsemi Clock Distribution Fanout Buffers

Today's modern systems often require the distribution of several clock frequencies to multiple loads. Clock buffers complement clock synthesis devices by providing additional fanout capability as needed.

The ability to create multiple copies of a clock signal and distribute them among several loads with minimal additive jitter is a key advantage of a strong clock management solution. Jitter budget is mostly dedicated to the clock source and very little is left for clock management. Microsemi high performance buffers add minimal jitter combined with industry leading power supply noise filtering. This results in reduced system cost and easier design.

This family of buffers has a flexible I/O structure where inputs

are compatible with LVPECL, LVDS, CML, HCSL, LVCMOS, HSTL and SSTL, and outputs support LVPECL and LVDS signals.

Buffers with internal termination reduce the need for external components to save board cost and complexity. Buffers without internal termination support the use of precision external termination components and additional termination methods.

The family offers six fanout combinations—1:2, 1:4, 1:6, 1:8, 2:6, and 2:8—all available with internal or external input termination and LVDS or LVPECL outputs. These options provide the ideal devices for meeting application needs and easing component sourcing requirements.

Output Type	Input Termination	1:2	1:4	1:6	1:8	2:6	2:8	2:8
						Glitch-Free Switching		Simple Switching
		QFN-16 3x3mm	QFN-16 3x3mm	QFN-32 5x5mm	QFN-32 5x5mm	QFN-32 5x5mm	QFN-32 5x5mm	QFN-32 5x5mm
LVPECL	External	ZL40200	ZL40202	ZL40204	ZL40206	ZL40208	ZL40210	ZL40224
	Internal	ZL40201	ZL40203	ZL40205	ZL40207	ZL40209	ZL40211	ZL40225
LVDS	External	ZL40212	ZL40214	ZL40216	ZL40218	ZL40220	ZL40222	ZL40226
	Internal	ZL40213	ZL40215	ZL40217	ZL40219	ZL40221	ZL40223	ZL40227

Microsemi Corporation (Nasdaq: MSCC) offers a comprehensive portfolio of semiconductor and system solutions for communications, defense & security, aerospace and industrial markets. Products include high-performance and radiation-hardened analog mixed-signal integrated circuits, FPGAs, SoCs and ASICs; power management products; timing and synchronization devices and precise time solutions, setting the world's standard for time; voice processing devices; RF solutions; discrete components; security technologies and scalable anti-tamper products; Power-over-Ethernet ICs and midspans; as well as custom design capabilities and services. Microsemi is headquartered in Aliso Viejo, Calif., and has approximately 3,400 employees globally. Learn more at www.microsemi.com.
